the small systems journal

OPERATING SYSTEMS

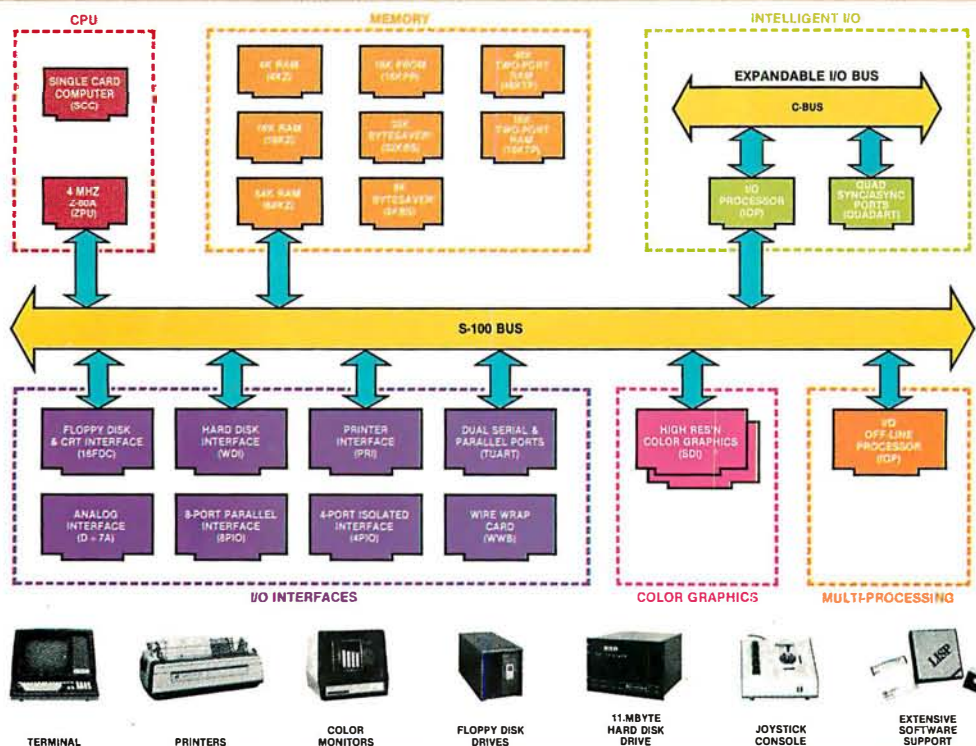

YOUR CHOICE-smart either way

- Over 140 software driven functions
- 82 x 24 or 82 x 20 screen format — software selectable
- High resolution 7 x 12 matrix characters — P-31 green phosphor
- Upper/lower case character set — plus graphics character set
- 56-key alphanumeric keyboard — plus 12-key cursor, numeric pad
- Internal editing functions — insert, delete, scroll, roll, slide, etc.
- Parallel printer I/O port
- 50 to 38,400 baud operation — programmable
- Cursor type, cursor position, print control characters, protected fields, shift inversion, dual intensity and many other features

8212 — twelve-inch diagonal screen or **8209** — nine-inch diagonal screen

What Cromemco computer card capability can do for you

The above diagram shows in a functional way one of the most complete lines of computer cards in the industry.

Look it over carefully. It could be well worth your while.

These are all cards that plug into our S-100 bus microcomputers.

You can also assemble them into a custom system in convenient Cromemco card cages.

MULTI-PROCESSING AND INTELLIGENT I/O

The range of capabilities and versatility you can draw upon is enormous.

In processors, for example, you have a choice of CPU's including our extremely useful new I/O Processor. This can be used as a satellite processor to do off-line processing, multi-processing, and to form intelligent I/O. It opens the door to a whole new group of applications and tasks. Ask us about it.

HIGH RESOLUTION COLOR GRAPHICS

Again, you can have beautiful high-resolution color graphics with our color graphics interface. You can select from over 4000 colors and have a picture with a resolution at least equal to quality broadcast-TV pictures.

You have an unprecedented selection of memory including our unusual 48K and 16K two-port RAMs which allow high-speed color graphics.

LOTS OF STORAGE

These days you often want lots of disk storage. So you can select from our disk controller card which will operate our 5" and 8" floppy disk drives (up to 1.2 megabytes). Or select our WDI interface to operate our 11-megabyte hard disk drives.

POWERFUL SOFTWARE AND PERIPHERAL SUPPORT

There's much more yet you can do with our cards. And, of course, there's an easy way to put them to work in our 8-, 12-, and 21-slot card cages. Our PS8 power supply makes it simple to get the system into operation.

Finally, Cromemco offers you the strongest software support in the industry

with languages like FORTRAN, C, COBOL, ASSEMBLER, LISP, BASIC and others. There is also a wide choice from independent vendors.

To top it all off, you can draw from a substantial array of peripherals: terminals, printers, color monitors and disk drives.

CONTACT YOUR CROMEMCO REP

There is even more capability than we're able to describe here.

Contact your Cromemco rep now and get this capability working for you.

CROMEMCO COMPUTER CARDS

- **PROCESSORS** — 4 MHz Z-80 A CPU, single card computer, I/O processor
- **MEMORY** — up to 64K including special 48K and 16K two-port RAMs and our very well known BYTESAVERS® with PROM programming capability
- **HIGH RESOLUTION COLOR GRAPHICS** — our SDI offers up to 754 x 482 pixel resolution.
- **GENERAL PURPOSE INTERFACES** — QUADART four-channel serial communications, TU-ART two-channel parallel and two-channel serial, 8PIO 8-port parallel, 4PIO 4-port isolated parallel, D+7A 7-channel D/A and A/D converter, printer interface, floppy disk controller with RS-232 interface and system diagnostics, wire-wrap and extender cards for your development work.

Management Information Display

Ultrasonic heart sector scan

High-resolution display with alphanumerics

Get the professional color display that has BASIC/FORTRAN simplicity

LOW-PRICED, TOO

Here's a color display that has everything: professional-level resolution, enormous color range, easy software, NTSC conformance, and low price.

Basically, this new Cromemco Model SDI* is a two-board interface that plugs into any Cromemco computer.

The SDI then maps computer display memory content onto a convenient color monitor to give high-quality, high-resolution displays (756 H x 482 V pixels).

When we say the SDI results in a high-quality professional display, we mean **you can't get higher resolution than this system offers in an NTSC-conforming display.**

The resolution surpasses that of a color TV picture.

BASIC/FORTRAN programming

Besides its high resolution and low price, the new SDI lets you control with optional Cromemco software packages that use simple BASIC- and FORTRAN-like commands.

Pick any of 16 colors (from a 4096-color palette) with instructions like DEFCLR (c, R, G, B). Or obtain a circle of specified size, location, and color with XCIRC (x, y, r, c).

Model SDI High-Resolution Color Graphics Interface

HIGH RESOLUTION

The SDI's high resolution gives a professional-quality display that strictly meets NTSC requirements. You get 756 pixels on every visible line of the NTSC standard display of 482 image lines. Vertical line spacing is 1 pixel.

To achieve the high-quality display, a separate output signal is produced for each of the three component colors (red, green, blue). This yields a sharper image than is possible using an NTSC-composite video signal and color TV set. Full image quality is readily realized with our high-quality RGB Monitor or any conventional red/green/blue monitor common in TV work.

Model SDI plugs into Z-2H 11-megabyte hard disk computer or any Cromemco computer

DISPLAY MEMORY

Along with the SDI we also offer an optional fast and novel **two-port** memory that gives independent high-speed access to the computer memory. The two-port memory stores one full display, permitting fast computer operation even during display.

CONTACT YOUR REP NOW

The Model SDI has been used in scientific work, engineering, business, TV, color graphics, and other areas. It's a good example of how Cromemco keeps computers in the field up to date, since it turns any Cromemco computer into an up-to-date color display computer.

The SDI has still more features that you should be informed about. So contact your Cromemco representative now and see all that the SDI will do for you.

In This Issue

It's the operating systems that turn a hunk of hardware into a clever machine. As Robert Tinney's cover drawing depicts, they are the brains behind the brawn of today's computing systems.

This month two articles analyze the most popular operating system, "CP/M: A Family of 8- and 16-Bit Operating Systems," by Gary Kildall, and James Larson's "The Ins and Outs of CP/M." If you can get by the title of Chris Morgan's editorial — "The New 16-Bit Operating Systems, or, the Search for Benutzerfreundlichkeit" — you'll discover what form the operating systems of the future may take. And Robert Greenberg presents what may be the next popular operating system in his article, "The UNIX Operating System and the XENIX Standard Operating Environment."

MICROANGELO

HIGH RESOLUTION GRAPHICS SINGLE BOARD COMPUTER

512 x 480 resolution black and white and vivid color displays

RS-170 composite or direct drive output

Local or external sync generation

4 Mhz Z80 microprocessor

60 hertz real-time clock

8 level interrupt tie-in

IEEE S100 bus compatible

Light pen interface

Time multiplexed refresh

4K resident Screenware™ Pak I operating system

32K RAM isolated from host address space

High speed communications over parallel bus ports

Screenware™ Pak I

A 4K byte operating system resident in PROM on MicroAngelo™. Pak I emulates an 85 character by 40 line graphics terminal and provides over 40 graphics commands. Provisions exist for user defined character sets and directly callable user extensions to Screenware™ Pak I.

Screenware™ Pak II

An optional software superset of Pak I which adds circle generation, polygon flood, programmable split screen for separate graphics and terminal I/O, relative coordinates, faster vector and character plotting, a macro facility, full UCSD Pascal compatibility, and more.

And now...COLOR!!

The new MicroAngelo™ Palette board treats from 2 to 8 MicroAngelos as "bit planes" at a full 512 x 480 resolution. Up to 256 colors may be chosen from 16.8 million through the programmable color lookup table. Overlays, bit plane precedence, fade-in, fade-out, gray levels, blinking bit plane, and a highly visual color editor are standard.

When you're tired of following your friends to the clay pits, do your modeling with **PLAN80**™.

PLAN80 is a financial modeling system that runs on a desk top computer. It's easy to use yet powerful enough to replace most timesharing applications.

PLAN80 lets you tackle any numeric problem that can be defined in worksheet format. It performs complex calculations quickly and precisely and lets you examine "What if?" questions so you can evaluate more planning alternatives in greater detail.

With **PLAN80** you get more than your calculated results...You know **how** you get them, because you define rows and columns with familiar names such as UNITS, PRICE and JANUARY and express calculations in terms such as $SALES = UNITS * PRICE$. It's easy to review your assumptions and methods with people who have never seen **PLAN80**.

At any point in the **PLAN80** model you may display or print results on your screen, printer or disk, save all or part of the results for use by another model, or play "What if?" by inputting new values, recalculating and displaying or printing results.

Best of all, you can incorporate **PLAN80** results into any report that requires a financial model—using your word processor—to create professional results for a polished business plan.

Anyone can use **PLAN80** to create budgets, project sales or analyze costs—or even build a complex system of interrelated plans.

PLAN80 requires 56K RAM & CP/M. Specify Z80, 8080 or CDOS. Formats: 8" single density IBM soft-sectored, Cromemco CDOS, 5¼" NorthStar DD, Micropolis Mod II, Superbrain 3.0.

Price is \$295. Manual alone—\$30.
Add \$7.00 for shipping & handling.

Editorial

The New 16-Bit Operating Systems, or, The Search for Benützerfreundlichkeit

by Chris Morgan, Editor in Chief

"Benützerfreundlichkeit: (literally 'user friendliness') The philosophy that a system should be constructed with the interests of the user as the chief concern."

—from The Practical Guide to Structured Systems Design
by Meilir Page-Jones, Yourdon Press, New York, 1980, page 338.

Sam Goldwyn, the "G" of MGM, was famous for his inside-out logic. He once said, "A verbal agreement isn't worth the paper it's written on." This month's topic prompted me to coin a "Goldwynism" of my own: "The best time to talk about the future is before it happens."

In one sense 16-bit microcomputers are definitely here, yet in another they are strangers to us. The personal-computer community still lives in an 8-bit world, straining all 8 bits of every word to perform miracles.

But all that can and must change. Opponents of 16-bit systems cite cost and software conversion problems as the two main justifications for staying with 8 bits. Yet, how can software keep pace with the increased demand for more sophisticated graphics, to name only one area, unless we can address more than 64 K bytes of memory? How will we be able to access the staggering amounts of information in future memory banks without an increase in word size? And then there are the exciting new languages like Smalltalk that demand 16 bits for their operation. Simply put, 16 bits is the only way to go. The 16-bit operating system, therefore, becomes a critical link in the computing chain.

Doing It Right the Second Time

The *operating system* is the "master controller" of the computer: it gets us going when we turn on our computers, keeps track of files, lets programs talk to one another, performs input/output tasks, and so on. Put charitably, most operating systems in the 8-bit world have been afterthoughts or compromises in design. Even CP/M, a de facto standard in our field, has been criticized as being awkward for nontechnical users. But CP/M's ubiquitousness is responsible for the development of a lot of valuable software that would otherwise probably not have been written.

The sin of inefficiency is venial compared to the mortal sin of "user-unfriendliness." I'd buy an operating system any day that takes a long time to run a given program but which makes me more productive by communicating with me in useful ways. Let's face it: most of us don't have to worry about real-time process control and its inherent time constraints. And the cost of a line of code is becoming astronomical.

KEVIN COHAN 1956-1981

Kevin Cohan, BYTE technical editor, died April 22nd when the car he was driving left the road, striking a tree. He was 24 years old. Kevin joined the BYTE staff in November, 1980, after attending Dartmouth College, and was a valuable and well-liked member of our "family." He will be missed.

Percom Mini-Disk Drive Systems for TRS-80* Computers...

Now! Add-On and Add-In Mini-Disk Storage for your Model III.

The industry leader in microcomputer peripherals, Percom not only gives you better design, better quality and first-rate service, but you pay less to boot.

New for the TRS-80* Model III

Patterned after our fast-selling TFD Model I drives. And subjected to the same reliability controls. These new TFD mini-disk systems for the Model III provide more features than Tandy drives, yet cost far less.

- **Flippy Capability:** Both internal (add-in) and external (add-on) drives permit recording on either side of a diskette.
- **Greater Storage Capacity:** Available with either 40- or 80-track drive mechanisms, Percom TFD mini-disk systems store more. A 40-track drive stores up to 180 Kbytes — formatted — on one side of a 5-inch diskette. An 80-track drive stores a whopping 364 Kbytes.
- **1.5 Mbyte On-line:** The Percom drive controller (included with the initial drive) handles up to four drives. With four 80-track mini-disk drives you can access over 1.5 million bytes of on-line file data.
Moreover, the initial drive may be **either** an internal add-in drive or an external add-on drive. And whichever configuration you get, the initial drive kit comes complete with our advanced 4-drive controller, interconnecting cables, power supplies, installation hardware, a DOS and of course the drive mechanism itself.
- **First Drive Includes DOS:** OS-80™, Percom's fast extendable BASIC-language disk operating system, is included on diskette when you purchase an initial drive kit. Originally called MicroDOS, OS-80 was favorably reviewed in the June 1980 issue of Creative Computing magazine.
- **Works with Model III TRSDOS:** Besides being fully hardware compatible, Percom's Model III 40-track drive systems may be operated with Tandy's Model III TRSDOS — without any modifications whatsoever. And, TRSDOS may be easily upgraded with simple software patches for operating 80-track drives.

Percom TFD add-on drives start at only \$399. Model III Drive kits start at only \$749.95.

Quality Percom products are available at authorized dealers. Call toll free 1-800-527-1592 for the address of your nearest dealer or to order direct from Percom.

Still #1 for Model I

As if greater storage capacities, exceptional quality control measures and lower prices aren't reasons enough to make Percom your first choice for Model I add-on drives, **all** Percom Model I drives are also rated for double-density operation.

Add our innovative DOUBLER™ adapter to your Model I Expansion Interface, and with Percom drive systems you can enjoy the same double-density storage capability as Model III owners.

The DOUBLER includes a TRSDOS*-like double-density disk operating system called DBLDOS™.

We also offer a double-density Model I version of OS-80 as well as DOUBLEZAP programs for modifying NEWDOS/80 and VTOS 4.0† for DOUBLER compatibility.

Of course you don't have to upgrade your computer for double-density operation to use Percom mini-disk drive systems. In single-density operation, our TRS-80* Model I compatible 40-track drives store 102 Kbytes of formatted data on one side of a diskette, and our 80-track drives store 205 Kbytes. By comparison, Tandy's standard drive for the Model I stores just 86 Kbytes.

And like our Model III drives, Model I add-on drives are optionally available with "flippy" storage capability.

System Requirements:

Model III: 16-Kbyte system (min) and Model III BASIC. The second internal drive may be installed after the first internal drive kit is installed, and external drives #2, #3 and #4 may be added if either an internal or external first-drive kit has been installed. External drives #3 and #4 require an optional interconnecting cable.

Model I: 16-Kbyte system (min), Level II BASIC, Expansion Interface, disk operating system and an interconnecting cable. For double-density storage, a Percom DOUBLER must be installed in the Expansion Interface and DBLDOS (comes with the DOUBLER) or other double-density DOS must be used. For single-density operation, a Percom SEPARATOR™ adapter, installed in the Expansion Interface, will virtually eliminate "CRC ERROR — TRACK LOCKED OUT" read errors. Prices and specifications subject to change without notice.

FOR ANY ϵ
THERE IS A δ^*

WHY LET ONE MAINFRAME DEFINE

OUR WELL-DIFFERENTIATED
ARE CALCULATED
SYSTEMS INTEGRATION

A simple algorithm

We work with the serious systems integrator... on terms that make sense to you. That means giving you a set of products which expand your limits, not reduce them.

We manufacture the most complete family of high quality IEEE/696 S-100 mainframes on the market. Choices include three mainframes in rack-mount or table-top packages with complete board sets, to serve as the building blocks for your 8 or 16 bit system. We also provide other options ranging from complete floppy disk systems right up to our proven Pascal development system.

The \int factor: one source.

No matter which option you choose, you get the benefit of working with completely integrated products... fully assembled and tested... under one warranty and one price structure... leaving you free to concentrate on value-added application development and sales.

Choose from mainframe options...

Select from three packaging options: Rack-mount, table-top or front panel models. All three feature our 20 slot S-100 motherboard with 25 amp power supply and are delivered fully assembled and tested with our Series II™ board sets. Any board configuration you choose works with any DPS-1 version, allowing you to vary your package offering, or develop on one version and market another.

- ♦ Front Panel model — a powerful development and diagnostic tool for Z-80† systems, which can be used for prototyping, servicing, debugging, and software or hardware development. Use its features to set breakpoints, trigger scopes, single step, slow step and more.
- ♦ Front Panelless desk top model—a lower cost option for OEM or other turnkey operations which do not require the extra capability of our Front Panel.
- ♦ Rack Mount version — features a heavy gauge frame designed to fit into standard 19" racks. CVT power supply for brown out immunity is standard.

*In Calculus, a fundamental statement in the definition of limit; interpreted here to imply: "For your integration problem, Intersystems has a solution."

† Registered trademark of Zilog, Inc.

YOUR LIMITS?

OPTIONS
TO SOLVE YOUR
PROBLEMS.

Board level options ...

Intersystems mainframe packages, equipped with Series II boards, are operational in both 8 and 16 bit settings and support extended addressing in both I/O and memory space, recognizing 16 bit I/O addresses and 24 bit memory addresses. Just look at these individual features:

- ♦ MPU-80—uses a Z-80, 8 vectored interrupt lines and two 4K windows to address up to 1 Megabyte of RAM without bank select.
- ♦ 64KDR—sophisticated refresh circuitry allows unlimited DMA and absolutely reliable operation without wait states.

- ♦ 6 SI/O — six individually software-controllable serial I/O ports with optional interrupts. Each can run RS 232 at up to 19,200 BAUD, as can our VI/O board.
- ♦ VI/O—has two serial ports; two 8-bit parallel output and two 8-bit parallel input ports plus 8 individually controllable command lines and 16 levels of vectored interrupts.
- ♦ FDC II—can DMA up to a full track into 16 Megabytes of memory. Optionally generates interrupts and handles up to four 8" floppies.
- ♦ MPU-8000 — available with the non-segmented Z-8002[†], which directly addresses 64K, or the segmented Z-8001[†], which can directly address 8 Megabytes.

Extended systems options ...

Interfacing disk drives is not a trivial matter, so when your objectives and resources dictate you spend your energy elsewhere, use our resources to perform the service for you. We can add our disk drive package to any Z-80 or Z-8000 configuration we provide ... again, fully assembled and tested and covered under one warranty.

Or our complete Pascal Development System.

We use it for our own hardware and software development. It includes either table-top mainframe, two 8" floppy disks, 128K RAM, CP/M[®], and Intersystems Pascal/Z[™] compiler and Cache BIOS[™]. THIS SYSTEM IS FAST! Why? Because our ultra-fast Cache BIOS automatically buffers whole tracks, eliminating most disk accesses. This delivers up to three times the throughput of any other floppy-based system we know and is equal to many small hard disk systems.

The system is versatile, too. SET program allows you to change many BIOS parameters and specify control characters to enable special features such as diagnostic output to trace program execution. It can also provide remote I/O to link your system to almost any other computer, large or small.

And it's reliable. The Cache BIOS System runs continuous memory tests when idle, and verifies with a Read after Write and Read after Read.

And the system also includes our Pascal/Z, a true native compiler producing ROMable and Re-entrant code. It features a minimum of extensions chosen for the development of your scientific and business applications. And it's compatible with our native code Pascal for Z-8000, providing a graceful upward path to 16 bit applications. So what you write now is right later.

One choice you won't have to make...

We don't believe you should ever have to sacrifice good technical support to find a good product. We'll back you to the hilt with services like free technical consultation, board-swapping, diagnostic packages, and documentation that gives you all you need to integrate, operate and maintain your system ... right down to schematics of the boards.

Your solution should be clear.

Whether you're integrating for scientific, governmental or commercial applications, Intersystems can provide a Delta for your Epsilon.

High Technology

We make our
competition
obsolete

with Information Master,TM
Data Master,TM and Transit.TM

Information Master is clearly the best information management software available for your Apple II,* and it's the easiest to use.

Here are two very useful companions that add even more power to Information Master.

- Data Master — Alter the file layout of existing Information Master files without re-entering data. Add, omit, change fields, subdivide and append files selectively.
- Transit — Convert VisiCalc* files (and almost any other files you may have) into Information Master files.

See your computer dealer today for all the details.

* VisiCalc is a trademark of Personal Software, Inc.
Apple II is a trademark of Apple Computer, Inc.

Editorial

Now we have a chance to start with a clean slate. Software manufacturers are filling their 16-bit tabula rasas with offsprings of UNIX, an operating system developed at Bell Labs in 1969 by Kenneth Thompson and Dennis Ritchie. (See Robert Greenberg's article, "The UNIX Operating System and the XENIX Standard Operating Environment," page 248.) A software engineer was quoted in a recent issue of *Electronics* magazine (March 24, 1981, page 119) as saying that UNIX is "like sitting behind the wheel of a well-tuned sports car—when you press the gas, it goes, and when you hit the brakes, it stops. It's the ultimate in responsiveness, and yet all the while you are riding in comfort." UNIX deserves such accolades. Its hierarchical file structure lends much needed order to the chaotic approaches found in many personal computer operating systems; it is designed for truly efficient multiuser operation; the elegant idea of the *pipe* allows data to flow from program to program efficiently; and the *shell* program acts as a user-friendly interface to the rest of the operating system. An excellent example of UNIX's versatility, described in Greenberg's article, shows how the user can add a simple spelling correction program to a system, with just one line of code.

New Programs

Several software vendors have taken out licenses to adapt UNIX to 16-bit personal computer systems. These include Microsoft, Whitesmiths, Zilog, and Onyx, the developers of XENIX, Idris, Zeus, and Onix, respectively. Among non-UNIX-related 16-bit operating systems, OASIS, developed by Phase One Systems Inc, has received high marks from many professional programmers. And judging from its past track record with CP/M, Digital Research's new CP/M-86 should also become a major factor in the market. (See "CP/M: A Family of 8- and 16-Bit Operating Systems," by Gary Kildall, page 216.)

Despite the recent relaxation of UNIX licensing fee conditions by Western Electric, the UNIX offspring will not be cheap. Operating system software could sell for more than \$2000. However, Lifeboat Associates' version of XENIX will probably retail for less than \$1000 by the end of the year.

The 8-bit computer is far from dead. There is too much good 8-bit software around for this to happen. And, for many applications, it's hard to beat the price-performance ratio of the 8-bit machine—at least by today's prices. Sixteen-bit and 8-bit machines will coexist for many years to come. I don't believe in the "mutually exclusive" school of computer punditry. Just as no high-level language has ever supplanted another (can readers give me an example of this?), 8-, 16-, 32-, (etc) bit microcomputers will coexist in the future.

In our field, the future becomes the present overnight. You don't need a crystal ball to state emphatically that we have not seen the end of the 8-bit versus 16-bit debate. But the new operating systems do add a welcomed layer of professionalism to personal computing. ■

Apple* I/O Interfaces. SSM Spells Success Three Ways.

SSM helps you get the most from your Apple II* computer. Choose from three general purpose interface boards. With flexibility and prices that translate to big savings. Now, and when you upgrade.

Serial (ASIO™). Our ASIO gives you a full-duplex RS-232 interface. Plus jumper-selectable rates from 110 to 9600 baud. You also get software control, three handshaking lines and two output plugs—so you can connect your Apple to a modem or to a terminal/printer without modifying the cable.

Parallel (APIO™). For parallel interfaces, our APIO offers two 8-bit bidirectional ports. We also include additional interrupt and handshaking lines, plus software control of the interface configuration and data direction. Cables for Centronics and other printers are optional.

Or Both (AIO™). Choose our tried and proven AIO when you

need a sometimes-serial or a sometimes-parallel operation. This single-board solution packs a lot of performance for the price. Thousands are now being used. It even lets you operate both ways—simultaneously—under Pascal, or with special drivers.

All three boards feature powerful firmware so you don't have to write software to use them. The ASIO and AIO include cables.

Whether you're an OEM or end-user, we can supply virtually any quantity you need.

Quickly. Even in kit form. For the latest word on these, see your local computer dealer. Or call us today. You may also want to look into our cost-effective A488™ board which converts your Apple II into an IEEE-488 controller.

OSI Still In Personal-Computer Business

As a result of "Ohio Scientific Sold" ("BYTELINES," March 1981 BYTE, page 246), we have had several telephone calls from dealers who were disturbed by BYTE's report that "In all likelihood OSI will move away from personal computing and into the small-business market." This statement is a false and damaging "projection."

When Ohio Scientific was founded in 1975, our first products were designed for, and directed to, the personal-computer market. In 1977, when other small-computer manufacturers were entering the "fun and games" computer market, OSI introduced the Challenger C3B Business Systems, featuring a three-processor system with 74-megabyte Winchester hard-disk storage.

As a pioneer in small business-computer systems, we feel we moved into the small-business market some time ago. Our

first business-system advertisements appeared in BYTE in 1978!

As for our personal-computer systems, now and for the future—in May 1980, we announced an enhanced version of our Challenger C1P and introduced our Challenger C1P Series 2. In total units and dollar volume, we are counting heavily on our personal-computer line to carry a full share of Ohio Scientific's continued success.

W Paul Warren
Coordinator, Marketing Communications
Ohio Scientific
1333 S Chillicothe Rd
Aurora OH 44202

We are sorry for any misinterpretations of Sol Libes's speculation on the future of OSI's marketing strategy. We were not implying that OSI will drop its personal-computer line, but that we feel that there may be a shift in its marketing emphasis.
... MH

BYTELINES Makes Waves

I have always enjoyed reading Sol Libes's "BYTELINES," and consider him to be a good source of information on the personal-computer industry, except for one annoying trait. Because Mr Libes is professionally associated with products that use the S-100 bus, his information is strongly biased toward Intel and S-100 products. For example, I recently counted six issues in a row where he discussed UNIX-like software to be introduced for Intel and S-100 users. At no time did he mention that the Motorola/S-50 users have had UNIX-like systems available for some time. Certainly he has seen the advertisements in BYTE for UNIFLEX for the 6809 by TSC (Technical Systems Consultants). If Mr Libes hasn't heard of the UNIX-like OS-9 by Microware, it is only because he looks at the world through S-100 blinders. Perhaps "BYTELINES" should be expanded to include associate editors who would supply information on other computer buses and the popular "no-bus" systems.

Leo Taylor
18 Ridge Ct W
West Haven CT 06516

Sol Libes Replies:

I am pleased that Leo Taylor enjoys reading my column and considers it "a good source of information." There is no doubt that I have a bias toward S-100-based systems—I guess it's my upbringing. I try to control it and present a balanced picture of the personal-computing field. I feel that I am successful 99% of the time, and that no one can be 100% unbiased.

When I wrote the UNIX items for "BYTELINES" during the spring and summer of 1980, TSC had not yet announced UNIFLEX, so I was not aware that it was coming. Additionally, nowhere in TSC's advertisements is it specifically stated that UNIFLEX is "UNIX-like," although the description sure sounds like it is.

The OS-9 operating system fell into the same category as UNIFLEX. Despite the fact that its advertisements refer to OS-9 as UNIX-like, a product review, in the December 1980 issue of 68' Micro Journal, stated that "the similarity [to UNIX] is mostly superficial."

Mini Power, Micro Price!

New CADO C.A.T. II Desktop Multi-Terminal Business Computer/Word Processor

Do your payables and receivables... type letters and print reports... all at the same time! CADO'S Data & Word Processor, TWX & Telex communications, and Just Ask™ inquiry system do it all. Off-the-shelf software, self-teaching tutorials & Mini-Winchester high capacity disk drives are available, of course. Write now for free color brochure.

The One Printer Solution for the Two Printer Problem.

HIGH SPEED DATA PROCESSING

The new Dual-Mode 200 brings speed and uncompromising print quality to business and professional applications.

Financial statements, inventory reports, labels and more are printed at data processing speeds from 165 cps to 250 cps.

Fully adjustable tractors and a friction feed platen provide precise forms handling for pin-feed and single sheet paper.

Complete "Dot Control" graphics is standard with resolution to 120 x 144 dots per inch.

Interfacing is easy with both E.I.A. RS-232C serial and an ASCII parallel port.

LETTER QUALITY WORD PROCESSING

The Dual-Mode 200 also features letter-perfect print you will be proud to use for business letters and reports. Letter Mode speeds range from 42 cps to 60 cps.

The standard Titan 10 pitch font is complemented by an array of optional fonts including Elite 12 pitch, italics, proportionally spaced, OCR-A, scientific and foreign character sets.

Up to 12 font selections may be stored in the printer and interchanged while printing.

The Dual-Mode 200 accepts standard daisy-wheel print commands for word processing system compatibility.

It's the perfect solution for the two printer problem.

The Dual-Mode 200 Printer for the one printer office.

Treasure on Disk

I enjoyed the reviews and comments on the Adventure-like games in the December 1980 BYTE, especially Jerry Pournelle's "User's Column." (See "BASIC, Computer Languages, and Computer Adventures," page 222.) I would, however, like to point out for the benefit of BYTE's readers that the original version of Adventure ("The Colossal Cave") has been available from the Heath Users' Group for over two years, for a mere \$10.

This version comes on a 5-inch disk that runs on the Heath H-8 (with disk drive) or the H-89 computers. A minimum of 32 K bytes of memory is required, and the game plays very fast. Unlike other issues, Heath's version (written by Gordon Letwin before he left to join Microsoft) can be easily copied for backup and safe keeping—a distinct plus.

I'd also like to point out that while there are several maps and guides available to the Colossal Cave, none help that much. They may assist in reducing the search for treasures, but they won't help in avoiding some of the more subtle pitfalls, and certainly won't help in the Final Adventure.

D C Shoemaker
2000 A Foxridge
Blacksburg VA 24060

More GOTOs Changing

In David Carew's article "Change Your GOTOS into FOR...NEXT Loops" (January 1981 BYTE, page 334), a better approach to the problem would have been (if step 0 not allowed):

```
510 FOR I=1 TO 2
520 READ X
530 I=1
535 IF X=K THEN I=2
540 NEXT I
```

However, the best way, for systems that allow it, is:

```
510 FOR I=0 TO -1 STEP -1
520 READ X
530 I=X=K
540 NEXT I
```

For the TRS-80 (and, I think, all Microsoft BASICs), line 530 treats the second equals sign as a logical operation, giving a -1 (true condition) if equal, and a 0 (false condition) if not equal. Some BASICs have a different convention for true and

false (some represent true as 1 and false as 0) so the statement would be FOR I=0 TO 1. Another advantage of this form is that it can be embedded in the middle of a long line as follows:

```
500 ..... : FOR I=0 TO -1 STEP -1
           : READ X : I=X=K : NEXT : ....
```

Both of these examples are faster than the published counterparts—always setting I to 1 is faster than the test (even if false), because there are fewer characters to interpret, and the same goes for the other example. Also, both of these examples use less memory for the program.

POB 585
Chicago IL 60690

CMOS Is Boss

A few important points need to be made in connection with Larry Malakoff's article "Memory: Making an Intelligent Decision." (See the February 1981 BYTE, page 142.) Mr Malakoff generalizes that dynamic memories are superior in the areas of packing density, power consumption, and cost. Unfortunately, he has overlooked one of the most exciting memory techniques currently available: CMOS (complementary metal-oxide semiconductor) static memories.

While we at Hitachi are active in the dynamic memory business (especially the 4816-type 16 K by 1-bit and the 4864-type 64 K by 1-bit devices), we recognize that, for many reasons, static memory is often desirable. This approach is typified by our CMOS 6116-type fully static 2 K by 8-bit memory.

Responding to each of Mr Malakoff's points:

●Density: Using the 6116, a 64 K-byte static memory board is not only feasible, but Godbout Electronics will soon release an S-100-compatible board, called RAM 17. The increased size of the 6116's package (24 pins versus 16 pins for the 4116-type dynamic device) is easily offset by the total lack of "tricky" refresh logic required by dynamic memory.

●Power Consumption: The 6116's power requirements (operating and standby) are equal to or less than most 16 K-bit dynamic devices. The power supply to Godbout's 64 K-byte static board is con-

Radio Shack's TRS-80TM Model III is Your Best Buy in Desktop Computers.

\$2495

(Because the "Extras" are Built In!)

With the TRS-80 Model III, you don't pay extra for the features you want. For \$2495, you get a *complete*, ready-to-run desktop computer. Go ahead — judge their extras by our standards.

32K RAM. Expandable to 48K.

Two Double-Density Disk Drives. You get two *built-in* 175K disk drives, and can add up to two more externally.

BASIC in 14K ROM. Our powerful Model III BASIC provides a program line editor, machine language programming, real time clock, and more. Compatible with most Model I Level III BASIC programs, too.

Upper and Lower Case Characters. With a special graphics character set, and 64 characters-per-line format.

Built-In Monitor. 12" high-resolution.

12-Key Datapad. As well as repeating keys and keyboard-controlled screen print.

Parallel Printer Port. Add one of our printers anytime.

RS-232 Serial Interface. For data communications, just add a modem.

Nationwide Support. Backed by 6100 Radio Shack stores and dealers, 130 Computer Centers and 135 service centers throughout the USA.

Available Now. Why pay more? Get a demonstration of our 32K, two-disk TRS-80 Model III computer today. For less

demanding applications (or if you want a personal "starter" system), check out our 16K Model III — only \$999.

Retail prices may vary at individual stores and dealers. Special order may be required.

servatively overregulated using one 7805 5 V, 1 A voltage regulator.

●Price: Expect the price of Godbout's RAM 17 to be competitive (\$1400) with the \$895 to \$1195 figures quoted by Mr Malakoff.

A few other points:

●Compatibility: The 6116 is easy to interface and is fully compatible with all processors, DMA (direct memory access) controllers, front panels, etc. Boards like those mentioned in the article may not work with faster processors (eg: 6809, 8088) now available for the S-100 bus.

●Versatility: The 6116 is pin-compatible with the 2716 EPROM (erasable programmable read-only memory) and Hitachi's new 48016 EEPROM (electrically erasable PROM), and so the user can configure a board to contain the best combination of memory types for a given application.

●Speed: The 6116 is available for speeds rated as fast as 120 ns (more than fast enough for microprocessor applications). Godbout's board will work with Z80 microprocessors running at 6 MHz with no wait states. I do not believe that there is a dynamic board that can do the same.

●Design Simplicity: No "black art" transparent refresh or special circuitry (eg: DMA, Reset) is needed; consequently, the time and the cost of the design process have been reduced. (For systems with more than 64 K bytes of memory, the best solution is to adopt the IEEE 696 Extended Addressing Standard, not the cumbersome nonstandard bank-select scheme.)

As CMOS manufacturing processes continue to approach NMOS in density, cost, and performance, companies like Hitachi have the capability to bring their CMOS expertise to bear on applications like memory devices and peripheral controllers. As devices become more complex, and applications more demanding, CMOS technology will be required to overcome thermal dissipation problems.

Hand-Held Computer Algorithm Improvement

I read with interest Gregg Williams's

Table Rank (N)	Number of Elements in Table (2^N)	Williams's Algorithm $F(N) = 2^N + 2F(N-1)$	Modified Algorithm $F'(N) = 2^N + 2F'(N-1) - 1$	Ordinary Lookup $N2^N$
1	2	1	1	2
2	4	6	$4 + 2(1) - 1 = 5$	8
3	8	20	$8 + 2(5) - 1 = 17$	24
4	16	56	$16 + 2(17) - 1 = 49$	64
5	32	144	$32 + 2(49) - 1 = 129$	160
6	64	352	$64 + 2(129) - 1 = 321$	384

Table 1

description of the Panasonic and Quasar hand-held computers, especially the data-compression techniques. (See "The Panasonic and Quasar Hand-Held Computers," January 1981 BYTE, page 34.) Reading the text box that describes the mapping algorithm, however, I noticed a possible improvement.

In figure 3, page 41, a permutation of four elements encoded with 6 bits (001010, by rows) is demonstrated. However, according to the text, the first box will always be unswitched. Since it is constant, the first box (or first bit) need not be stored explicitly. This leaves 5 bits instead of 6 to encode the permutation (01010 for the example). The recursive nature of the algorithm should compound the savings significantly for larger permutations. In table 1, I have reproduced Mr Williams's table 2 with an additional column.

Craig R Ewert
400 Raymondale #16
South Pasadena CA 91030

Gregg Williams Replies:

Your analysis of the requirements of the algorithm is completely correct, although this does not necessarily mean that even more space can be saved within the HHC (hand-held computer). I compiled the table of results you referred to based on a description of the algorithm, and I did not realize that the box in the upper-left corner did not need to be encoded. Although I was unable to contact the person who had written the code implementing the algorithm, your interpretation of the algorithm does, in fact, allow permutations to be stored with less memory. My thanks to you (and to Paul E Black, of Oquirrh City, Utah, who wrote a similar letter) for pointing this out.

Thermodynamic Flaws

Richard Hetherington's excellent "Programming Quickie" in the February 1981 BYTE contains one flaw that can cause the user of his routine to arrive at some misleading results. (See "Energy-Saving Cost/Benefit Analysis," page 266.)

Table 2 gave the heat value of various fuels, and as far as I can see, it's correct. Unfortunately, the heat values are theoretical maxima, and to compute cost savings you need to make allowances for inefficiencies in extracting that heat. In practice, efficiencies range from (essentially) 100% for electricity to 20% or less for a fireplace. (A small fire in a large fireplace on a cold night can actually run at negative efficiency—losing more heat up the chimney than it contributes to the house.) Efficiencies tend to vary with the quality of the heating hardware, and (I suspect) with whether they are measured in the laboratory or in a more conventional environment. In general, you would not be wrong to expect 100% for electricity; 60% to 70% for gas or oil heat; 40% to 50% for wood or coal stoves; and something pretty dismal for an unaugmented fireplace.

The conventional means of accounting for this are either to reevaluate the fuel's heat value by the efficiency, or to alter the equation $C = Z \cdot Q / H$ to read $C = Z \cdot Q \cdot E / (100 \cdot H)$, where E is the efficiency in percent. In this case, I would modify the routine to use the latter method, because it lets you evaluate the effect of switching to a more efficient heat source.

Anyone seriously planning to tackle his or her home-heating problem should construct a paper-and-pencil thermodynamic model of his or her house. This is nowhere near as difficult as it sounds. Any public library has some books (mostly those dealing with solar heating) that can help.

GUARANTEED RELIABLE FOR 2 FULL YEARS.

Unprecedented product reliability deserves an unprecedented warranty. IMS International provides its dealers with both.

Our commitment is real.

We are so confident that our products are the industry standard in reliability, we stand behind them for *two full years* from date-of-sale to the end user. All IMS manufactured products are covered.

The success of our dealers will insure our continued growth. That's why IMS International

is committed to providing every IMS dealer with these distinct advantages in today's marketplace:

- 2 year warranty
- Low retail cost
- Best margins in the industry
- Protected territories
- Full factory technical support
- Complete system delivery in 30 days
- Comprehensive advertising and promotional support

For more information about IMS International's "Reliable's" and our unique dealer plan, call 714/978-6966 or write us:

2800 Lockheed Way
Carson City, NV 89701
Telex: 910-395-6051

Mr Hetherington's routine is only as good as the data you put into it, and if you don't know how much heat you are putting into your house, and where it is going out, you may not recognize bad data when you use it.

Computers Can Help People

I read Mark Dahmke's editorial and would like to share with BYTE readers an interest of mine. (See "Computer Speech: An Update," February 1981 BYTE, page 6.)

I'm an academic adviser at Michigan State University and work with students in the Lower Division. Among our many academic services, we try to assist students in selecting majors that will help them attain their individual goals in life. I have very realistic concern and at the same time very optimistic hope for one student in particular.

Kelly Watson is a quadriplegic and has a combination of athetoid and spastic cerebral palsy. She is a delightful young lady—bright, pretty, and her sparkling sense of humor helps her overcome frustration. Kelly, although just 20, became a sophomore at the end of this winter term. She has gotten this far in her academic career out of sheer determination, and I'm sure someday she will be the newspaper editor she plans to become.

Kelly uses a joystick-operated electric wheelchair and types with a headstick on an IBM electric typewriter. MSU's Artificial Language Laboratory hopes to be able to provide her with a word-processing system. With financial assistance from concerned communities, technologists such as Mark Dahmke and John Eulenberg will soon be able to make accessible to persons such as Bill Rush and Kelly Watson those opportunities we all enjoy. I foresee a great advancement in human concern.

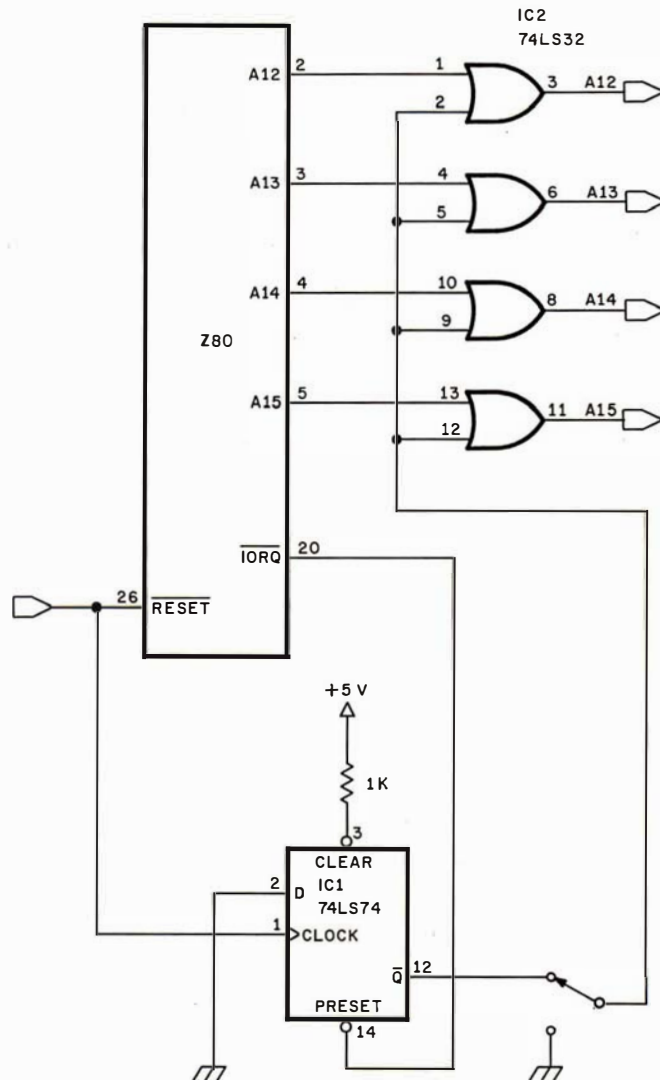

Figure 1

Simpler Starting Solution

Although Randy Soderstrom's approach to the problem of forcing the Z80 starting address was interesting, it is not the simplest solution. (See "Forcing the Z80 Starting Address," February 1981 BYTE, page 288.) His suggestion requires four integrated circuits, and an initial time delay is introduced. The circuit in figure 1 uses only two devices.

Upon reset of the system, the D flip-flop (IC1) is clocked, causing \bar{Q} to go high. Although the processor's address bus and program counter contain all 0s, the memory addressed is hexadecimal F000. The 74LS32 quad OR gate (IC2) accomplishes this with one input per gate high. The system monitor can be stored at hexadecimal address F000 and can now handle its high-priority housekeeping

without worrying about the address. A JP (jump immediate) to the next instruction will set the program counter correctly. The first OUT or IN instruction will activate the IORQ (input/output request), and then preset the D flip-flop, allowing signals on the address bus to pass freely through the 74LS32, and restoring the system to normal operation. As in Randy's circuit, there is no interference with memory refresh.

This technique is used on MOSTEK's STD Bus-based CPU-1 card. We feel this is the best and most economical approach to take.

Mountain Computer put it all together for you.

The CPS MultiFunction Card

Three cards in one! The Mountain Computer CPS MultiFunction Card provides all the capabilities of a serial interface, parallel output interface and real-time clock/calendar—all on one card—occupying only one slot in your Apple II®. Serial and Parallel output may be used simultaneously from CPS. CPS is configured from a set-up program on diskette which sets the parameters (such as baud rate, etc.) for all functions contained on the card and is stored in CMOS RAM on the card. Once you have configured your card, you need never set it up again. You may also change parameters from the keyboard with control commands. All function set-ups stored on-board are battery powered for up to two years. "Phantom slot" capability permits assigning each of the functions of CPS to different slots in your Apple without the card actually being in those slots! For example, insert CPS in slot #4 and set it up so that it simulates a parallel interface in slot #1 and a clock in slot #7 and leave the serial port assigned to slot #4. CPS's on-board intelligence lets it function in a wide variety of configurations, thereby providing software compatibility with most existing programs. "We've put it all together for you"—for these reasons and many more! Drop by your Apple dealer and see for yourself how our CPS MultiFunction Card can expand the capabilities of your Apple and save you a great deal of money as well!

Calendar/Clock

- One second to 99 years
- Battery backed-up (2 years)
- Two AA standard alkaline batteries for back-up (provided)
- Compatible with MCI Apple Clock™ time access programs

Parallel Output

- Features auto-line feed, Apple tabbing, line length, delay after carriage return, lower to upper case conversion
- Centronics standard—reconfigurable to other standards
- Status bit handshaking

Serial Interface

- Features auto-line feed, transparent terminal mode, Apple tabbing, line length, delay after carriage return, local echo of output characters, simultaneous serial/parallel output, lower to upper case conversion, discarding of extraneous LFs from serial input
- Uses the powerful 2651 serial PCI chip
- 16 selectable internal baud rates—50 to 19.2Kbaud
- Half/Full duplex terminal operation
- I/O interface conforms to RS-232C
- Asynchronous/Synchronous operation

BASIC Problems

Samuel Bates's "Rotation Algorithm" was fascinating but frustrating for two reasons. (See the January 1981 BYTE, page 328.) First, there are many terms used from Hewlett-Packard's HP 3000 BASIC that are not common to other versions of BASIC. I can figure out what MAT R=ZER does (it puts 0 in every element of the array R) and duplicate it with a subroutine, and I can determine from context that # means < > (not equal). However, I'm stymied by FILES*, ASSIGN, ENTER, and READ#1,1. Please, BYTE, return to the old policy of inserting a box with explanations of uncommon terms! A flowchart would have been useful, too.

"Whose BASIC Does What?" by Teri Li was also welcome. (See the January 1981 BYTE, page 318.) I hope its idea will be extended both to cover more computers and to be more complete in terms. I hope that BYTE will eventually publish it as a separate reference booklet. There were, however, some errors in the article.

```
10 FILES *
120 ASSIGN A$,1,S
160 ENTER 255,A9,A$
1130 READ #1,1
1140 IF END #1
      THEN 1190
1150 READ #1,B$
```

tells the interpreter that file names will be provided in a later ASSIGN statement
 assigns A\$ as file number 1, a sequential file
 allows 255 seconds for the values A9 and A\$ to be input
 sets the pointer for file number 1 to the first record
 transfers control to statement 1190 if
 end-of-file number 1 is encountered
 reads the next value from file number into the variable B\$

Table 2

For the Commodore PET, the major errors of significance are:

HOME and CLS should be checked.
 COLOR=n, FRE(x\$), SPC(expr), and
 RANDOMIZE should not be checked.
 CALL address should have SYS entered.
 TI(expr) should be TI or TI = expr.
 TI\$, a different real-time clock function,
 should be listed.

I don't need to say that BYTE is the best
 (I read six other journals regularly as

well), so I'll just say "thanks and keep it up."

Frank Chambers
Rock House
Ballyoroy, Westport
County Mayo, Ireland

The Hewlett-Packard 3000 is correctly classified as a minicomputer, so only a small percentage of our readers will have access to a system similar to the one used by Mr Bates. The BASIC statements that may be unfamiliar are defined in table 2. ■

"A pencil, a card, and this low-cost reader... it's the new, fast way to enter data into your microcomputer."

Interfaces to TRS-80, Apple II, PET, and others.

Good news! Now, all you need is a standard #2 pencil, a card, and our new MR-500 mark sense card reader to quickly and easily enter data into your favorite microcomputer.

As Easy as One, Two, Three...

Here's all you have to do. *One* — program the card by marking with the pencil. *Two* — feed the card into the reader slot. *Three* — the reader automatically turns on, the card is fed through, and data is instantly entered into memory. It's the simple low-cost alternative to keyboard data entry.

Interfaces with TRS-80, Apple, PET...

The MR-500 is ready to plug into most popular microcomputers. Interfaces are already available for TRS-80, Apple II and PET. And we're developing others almost daily. So whatever your microcomputer, we'll make it easy to use our mark sense card reader.

For Educators, Small Businessmen, and...

The applications for our low-cost MR-500 are endless. For small businesses, it's ideal for inventory, time cards, labor distribution (just to name a few). Educators will find that the MR-500 streamlines test scoring, attendance records, and grade reporting. Bet you can find a use already.

The Small Reader for the Small Computer

The MR-500 is lightweight — 4 lbs. Compact — a 4½-inch cube. And at \$750, it's the only mark sense card reader that makes sense for the small computer.

POWER FAIL HALT POWER ON

PUSH IN. PUSH ON.

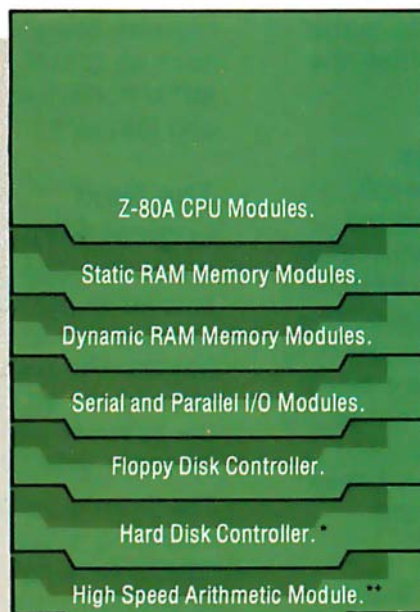

CCS. MAKING MINIS OUT OF MICROS.

Here's the CCS line of board-level computers for system builders on the move. **Push in** the CCS board. And **push on** with your application. CCS board-level systems go together easily, come up quickly, and run reliably, with a proven return rate of less than 1%.

CCS board-level computers offer systems builders the optimal combination of low development cost, low manufacturing cost, and high reliability from proven, tested modules.

A headstart on reliability. CCS modules are designed to industrial performance standards, manufactured to industrial quality standards, fully burned in and tested. You spend more time and energy on your application when you rely on CCS modules instead of reinventing (and rebuilding) standard computer functions.

A full selection of S-100 board-level computers. Whether you want to add capability to another S-100 based system, or build a system from scratch, chances are you'll find solu-

ons for all your system needs in the CCS product line. CCS manufactures a comprehensive selection, so you can tailor a system to your needs with a minimum of components. You buy exactly what you need. But you can easily expand later.

We'd like to tell you more about the CCS line of board-level computers, OEM systems, and computer systems. There's a lot more to tell. Send in the coupon for more information, contact your local computer dealer, or call.

- ☐ Please have a sales representative call me.
- ☐ Please send more information on CCS Board-Level Computer Modules.

Announcing

A Major Breakthrough

The

SYSTEM 2800

The System 2800 is the next logical step in the continuing line of innovative products from the Systems Group.

Unbeatable S-100 Memory Boards

First was the development of the DMB6400 series of S-100 Memory boards featuring the innovative Bank Select switching technique. This enables users to software select up to four totally independent memory banks per board.

The 2nd Generation

Then came the 2nd Generation of IEEE S-100 COMPATIBLE Z80 PROCESSORS, FLOPPY DISK CONTROLLERS and SERIAL I/O BOARDS. Each has been designed for single user, multi-user or

network operating systems such as CP/M®, MP/M™, CP/Net™ and OASIS™.

The Next Logical Step ...

We challenged our design team to create an innovative yet competitive system utilizing our existing line of field proven, dependable S-100 boards. The result: a highly reliable, quality built, state of the art microcomputer that gives you the cost/performance edge you need to be a leader in your field.

The System 2800 comes with a choice of operating systems: CP/M with an enhanced CBIOS for single user systems and either MP/M or OASIS for multi-user, multi-tasking systems. MP/M is available with either a standard or

CP/M MP/M and CP/Net are trademarks of Digital Research
OASIS is a trademark of Phase One Systems

enhanced XIOS. The CP/M based System 2800 provides improved diagnostic reporting capability and increased sector sizes of 1024 bytes yielding disk performance throughput increases up to 400% over standard unblocked systems.

The enhanced multi-user, multi-tasking MP/M based System 2800 provides the same advanced features as CP/M. In addition, this interrupt driven implementation can offer performance throughput increases up to 2000% thru extensive disk buffering for applications requiring a large number of disk accesses.

Also available is the OASIS operating system with ISAM files, automatic record locking and multiple-user print spooling.

All operating systems are available in either floppy or hard disk configurations. The disk drive selection includes single or double sided, double density 8-inch floppies with up to 2.52 megabytes of formatted storage per system, expandable to 5.04 megabytes, and an 8-inch 10 megabyte winchester hard disk.

Cost Effective Reliability

Dealers, OEM's and System Integrators share many common needs. Not the least of these is dependable products. That's why we back our System 2800 with our established reputation for high quality products, superior support, prompt and courteous service, and a one-year warranty.

Take the next logical step. See your nearest computer dealer, or contact us for the complete story on our S-100 family of board products and enhanced systems.

Hardware Review

RAMCRAM Memory Module for the Atari

Mark Pelczarski
1206 Kings Circle
West Chicago IL 60185

Axlon Inc has released an alternative for add-on memory for the Atari computers that might save some money for Atari 800 owners. RAMCRAM will also offer more memory for the Atari 400 than you may have thought possible.

For \$320 you can buy a single module that contains 32 K bytes of programmable memory. The unit plugs into the middle memory slot of an Atari 800, and with the 16 K-byte module provided with your system, gives a full 48 K bytes of memory (it will not work with only an 8 K-byte module ahead of it).

In an Atari 400, the module can replace the built-in 8 K bytes of memory to give a 32 K-byte system. The Atari 400 would then be able to use any software for Atari 800 32 K-byte systems, plus it would contain enough memory to handle a DOS (disk operating system) and, therefore, a floppy-disk drive. With RAMCRAM, Personal Software's 17 K-byte VisiCalc will run on the Atari 400.

In an Atari 800, the top 8 K bytes of memory-address space are pre-empted if you have a cartridge in the left slot, such as BASIC, the Editor/Assembler, or Star Raiders. With a left cartridge installed you can use

Photo 1: The Axlon RAMCRAM memory cartridge for the Atari 400 or 800.

only 40 K bytes. Without a cartridge, but with RAMCRAM installed, you have 48 K bytes of memory which can be used for copying disks faster on a one-drive system. (DOS does not require a cartridge, and more programmable memory means swapping disks fewer times while copying.) You also have 48 K bytes for machine-language programs that do not need cartridges, such as VisiCalc, and languages could be loaded from disk without using cartridges.

Axlon also provides its dealers with a memory-diagnostic program that will analyze the memory of an Atari

Turn your Apple into the world's most versatile personal computer.

The SoftCard™ Solution. SoftCard turns your Apple into two computers. A Z-80 and a 6502. By adding a Z-80 microprocessor and CP/M to your Apple, SoftCard turns your Apple into a CP/M based machine. That means you can access the single largest body of microcomputer software in existence. Two computers in one. And, the advantages of both.

Plug and go. The SoftCard system starts with a Z-80 based circuit card. Just plug it into any slot (except 0) of your Apple. No modifications required. SoftCard supports most of your Apple peripherals, and, in 6502-mode, your Apple is still your Apple.

CP/M for your Apple. You get CP/M on disk with the SoftCard package. It's a powerful and simple-to-use operating system. It supports more software than any other microcomputer operating system. And that's the key to the versatility of the SoftCard/Apple.

BASIC included. A powerful tool, BASIC-80 is included in the SoftCard package. Running under CP/M, ANSI Standard BASIC-80 is the most powerful microcomputer BASIC available. It includes extensive disk I/O statements, error trapping, integer variables, 16-digit precision, extensive EDIT commands and string functions, high and low-res Apple graphics, PRINT USING, CHAIN and COMMON, plus many additional commands. And, it's a BASIC you can compile with Microsoft's BASIC Compiler.

More languages. With SoftCard and CP/M, you can add Microsoft's ANSI Standard COBOL, and FORTRAN, or

Basic Compiler and Assembly Language Development System. All, more powerful tools for your Apple.

Seeing is believing. See the SoftCard in operation at your Microsoft or Apple dealer. We think you'll agree that the SoftCard turns your Apple into the world's most versatile personal computer.

Complete information? It's at your dealer's now. Or, we'll send it to you and include a dealer list. Write us. Call us. Or, circle the reader service card number below.

SoftCard is a trademark of Microsoft. Apple II and Apple II Plus are registered trademarks of Apple Computer. Z-80 is a registered trademark of Zilog, Inc. CP/M is a registered trademark of Digital Research, Inc.

Bellevue, WA 98004. (206) 454-1315

What can you honestly expect from an interactive data terminal that costs only \$369?*

Well, to begin with, color graphics.

RCA's VP-3301 has unique color-locking circuitry that gives you sharp, jitter-free color graphics and rainbow-free characters.

Plus much more: Microprocessor control. Resident and programmable character set. Reverse video. State-of-the-art LSI video control. 20 and 40 character formats. RS232C and 20 mA current loop. Six baud rates. Eight data formats. ASCII encoding. Light-touch flexible-membrane key switches for reliability and long life. CMOS circuitry and a spill-proof, dust-proof keyboard for hostile environments.

The VP-3301 can be used with a 525-line color or monochrome monitor or a standard TV set through an RF modulator.** It serves a wide variety of industrial, educational, business and individual applications including communication with time sharing and data base networks such as those provided by Dow Jones News/Retrieval Service, CompuServe and Source.

All this—for the low price of \$369. And it's made by RCA. So get the whole story about the surprising VP-3301 today. Write RCA MicroComputer Marketing, New Holland Avenue, Lancaster, PA 17604. Order toll-free: 800-233-0094.

*Model VP-3303 with built-in RF modulator—\$389.

**Suggested user price. Monitor and modem not included.

RCA

Circle 313 on inquiry card.

800, checking that the full 48 K bytes are functional. It performs three tests: the first tries to zero every bit in memory, the second checks for memory uniqueness by turning on bits and testing whether other bits were affected, and the third rolls a 1 bit through each location, checking that every bit can be turned on. The diagnostic program is available to customers for \$15.

If you own an Atari computer and you're the type of person that thinks ahead more than a year, it seems as though RAMCRAM is the way to go for memory expansion. If you own an Atari 400, it gives you memory that you couldn't get otherwise. If you own an Atari 800, it gives you all the memory it can now hold *and* leaves one expansion slot open for future use. Given Axlon's plans for additional Atari-compatible products, that slot may be valuable. ■

K-8073

THIS IS AN ENGINEER'S COMPUTER.

Simply attach a CRT, connect 5 volts, and you have yourself one each powerful, versatile microcomputer that YOU can program.

If you're fed-up with board level computers that require expensive development systems plus the skills of an Assembly language programmer, then you need the K-8073. With an on-chip microinterpreter and the extra control devices we designed into the board, you can do your own programming in the most simple English-like language available—Tiny BASIC. Sophisticated application designs can be implemented in hours instead of days or weeks because you have eliminated expensive and time consuming hardware and software costs.

IN ADDITION TO ALL THIS, the K-8073 offers advantages unheard of in other board level computers. Among these are an on-board EPROM Programmer, A Real Time Clock, Autostart, 1K Byte local RAM for variables, 8K Byte EPROM, ART/RC and PPI W/24 line I/O.

8K Byte RAM \$232.00

Development Station \$195.00

THE K-8073 IS FOR OEM'S AS WELL AS END USERS.

Whether you manufacture Industrial Process Control, Environmental or Test/Measurement systems, or simply for your own use, you can count on top quality performance. The K-8073 comes complete with all socketed devices including the powerful F-2 Utilities Firmware and a Hardware/Software manual.

In Industry, Education, or New Product Development, the K-8073 provides you with State-of-the-Art technology for microprocessor efficiency and ease. With a full line of support products, the TransWave line takes care of your every need at the most reasonable prices.

To order your K-8073 or for further information, write or call TRANSWAVE CORPORATION, Cedar Valley Building, Vanderbilt, PA 15486, (412) 628-6370.

TRANSWAVE
COMPUTER DIVISION OF UTSC

Introducing 4 new programs from the

These new programs are going to do for you just what our VisiCalc™ program has done: make your computer work harder, so you can work smarter!

They'll enable a personal computer to take over more of those tasks eating up so much of your time. That'll give you more time to concentrate on the tasks where your skills, experience and intuition can do the most good. Things like thinking, planning and managing.

A personal computer can help you do all these things better. And Personal Software™ programs will help you do them best!

VisiDex. The VisiDex™ program makes it a snap for you to remember anything, and everything, you don't want to forget.

It's a free-form personal filing program with nearly unlimited cross referencing.

VisiDex "thinks" and "remembers" just the way you ask it to—so you can access it anyway you want, and find exactly what you want—instantly!

VisiPlot. The VisiPlot™ program makes it easy to see what your numbers really say.

It adds real meaning to financial analysis, forecasting, budgeting and business planning. Because VisiPlot takes hard-to-grasp numbers and automatically turns them into easy-to-comprehend charts and graphs, right before your eyes!

All kinds of charts and graphs, with all kinds of flexibility in titling, shading, and color—all at the touch of a few buttons!

HOW TO WORK SMARTER NOT HARDER

people who brought you VisiCalc!

VisiTrend/VisiPlot. If you want sophisticated trend forecasting and statistical analysis—and you know how hard it is to create them by hand—you'll want to get your hands on the VisiTrend/VisiPlot™ program!

This program will enable you to rapidly perform regressions and time series analysis, plus providing you with comprehensive charting and graphing capabilities.

VisiTerm. The VisiTerm™ program enables you to reach out to the world.

With VisiTerm, you'll be able to use your personal computer to communicate with larger computers, to tap into data networks, to communicate with other personal computers.

VisiTerm gives you all the benefits of a personal computer, plus all the advantages of an intelligent terminal, all in one package.

All of these programs are currently available for the Apple II and II Plus. Besides their many individual benefits, these new programs deliver an even greater total benefit. That's because many of them interact with each other and with our new, enhanced version of VisiCalc.

Together, they give you an unprecedented family of personal computing capabilities; making the computer work harder, so you can work smarter!

LISP vs FORTRAN

A Fantasy

Laurie Rocheleau
c/o David Clay
Florida Institute of Technology
Melbourne FL 32901

Editor's Note: *David Clay, an instructor of computer science at the Florida Institute of Technology, sent us an interesting short story written by one of his students. In his cover letter, he wrote:*

"I assigned a short term paper recently on the comparison of two programming languages, LISP and FORTRAN. Most papers were written in an expected style, outline of topics, and format—until I came to Laurie Rocheleau's. I was surprised, entertained, and impressed. After reading it, I felt that others might find it a novel approach to a somewhat mundane academic chore—writing term papers."

We, too, were surprised, entertained, and impressed, so we decided to publish this short story/term paper. We also want to thank Clay for rewarding such creativity: the cover letter of Rocheleau's paper is marked "A + +". . . GW

As they wheeled her into the room her hopes began to fade. She had been praying that this place would be different from all the others. The last room had been so cold. Not only in temperature; no one had even attempted a conversation the entire eight months she had been there. This new room seemed to be a copy of the last, and all the others she had been in.

They placed her in a corner, and after plugging in all of her tubes and wires, they left. It was terribly quiet and dark.

Suddenly she began to receive something from someone across the room. She was absolutely ecstatic. Someone was trying to communicate with her. The language was a bit strange, it was some form of output statement:

PRINT*, 'What is your name?'

It was sort of hard to understand yet they were characters, her specialty, and after a bit of interpretation, she decided upon a method of replying. She had no PRINT statement in her memory, but she did have a trick up her circuit board. She sent her interpreter the instruction:

(CONS('My name is LISP. What is yours?)))

As the other received her message, she could almost sense a chuckle. Soon she received his reply:

PRINT*, 'My name is FORTRAN. Why must you com-

SOFTWARE FOR SERIOUS INVESTORS

Dow Jones Information Services Software Products Provide Personal Financial Control To Apple, Atari, Commodore And TRS-80TM Owners

In the convenience of your home or office, Dow Jones Information Services portfolio management packages give you on-line access to the in-depth business and investment information Dow Jones continually gathers for The Wall Street Journal, Barron's and the Dow Jones News Service.

Whether you own an Apple, Atari, Commodore, or Radio Shack computer, you can now control the management of your own portfolio in a way never before possible. . . tracking its growth, evaluating possible changes, even creating hypothetical new portfolios.

Imagine being able to call up current stock quotations on over 6,000 listed companies (with only a 15 minute delay) as well as fifty key financial indicators on selected firms. Imagine being able to spot trends, summarize data, and project growth. You can even review news in detail on the companies in your current or future portfolio (as recent as 90 seconds, as far back as 90 days).

What's more, when you make your software package purchase, we'll give you a Dow Jones password absolutely free. . . as well as one hour of free introductory time. Plus, software and usage costs will be tax deductible in many cases (consult your tax advisor for further information). And it's all just a fingertip away!

Find out more about Dow Jones' unique portfolio management packages at your nearest computer store, and be sure to ask for a free demonstration. Or, simply call Dow Jones today.

municate in such a strange way? Don't you have input and output commands?

She felt a bit embarrassed, yet she knew that she had many advantages over this FORTRAN fellow. She replied:

(CONS('No, I don't have input or output commands. I have to use this CONS instruction with quotes to get something printed out. And I have other instructions to use as input instructions.)))

His reply upset her greatly:

PRINT*, 'Ha, how cumbersome. I bet you can't even handle a simple addition without some complicated function call. Well anyway, I'll grace you with a little knowledge about myself. I was one of the world's first high-level programming languages. And today I am probably the most widely used language for programming of scientific and engineering computations.'

She sat for a few nanoseconds, organizing her cut-down:

(CONS('All right, blowhard, listen to this; I and my various dialects are the primary languages in at least two areas of computer science: symbolic computation and artificial intelligence, which are concerned with programs that perform tasks that humans say require intelligence. Has anyone ever said you have intelligence? I bet not!)))

PRINT*, 'Intelligent! How can you even consider your-

self intelligent if you can't deal with numbers. I mean numbers make the world go around. Look, even your insides are numbers—all zeros and ones, and you don't even understand them. I bet you can't deal with decimals, or even take the square root of a number—real or integer. You're useless.'

Quickly she replied:

(CONS('No, I can't take the square root of a number, but I can do quite a bit with numbers. Just take a look at this, these are some more of my functions:

(PLUS $X_1 \dots X_n$)	$= X_1 + \dots + X_n$
(DIFFERENCE X Y)	$= X - Y$
(MINUS X)	$= -X$
(TIMES $X_1 \dots X_n$)	$= X_1 \times \dots \times X_n$
(ADD1 X)	$= X + 1$
(SUB1 X)	$= X - 1$
(QUOTIENT X Y)	$= X \div Y$
(LESSP X Y)	$= T \text{ if } X < Y \text{ else NIL}$
(GREATERP X Y)	$= T \text{ if } X > Y \text{ else NIL}$
(ZEROP X)	$= T \text{ if } X = 0 \text{ else NIL}$
(NUMBERP X)	$= T \text{ if } X \text{ is a number else NIL}$
(LENGTH X)	$= \text{Length of list } X$

They may not be as simple to understand as your method of manipulating numbers, but remember this: numbers are just a minor part of my abilities. Why, unlike you, I can even distinguish between a character and a number with my NUMBER function.

I realize that you are very graceful when it comes to dealing with numbers, but when it comes to character manipulation, a programmer would be crazy to use you. With me, the programmer can easily deal with characters and do a little with numbers if need be. You see, I'm not quite so one-sided as you are.)))

PRINT*, 'OK Miss LISP, how about subroutines? They're simple. All I have to do after the END statement (I do hope you understand everything so far) of the main body is have the programmer write SUBROUTINE Name (parameter list). Below this all he has to do is write a subprogram that will be executed just like a regular program, when, in the calling program, the instruction CALL Name (argument list) is encountered. When the execution of the subroutine is finished, a RETURN statement returns control to the statement following the CALL statement in the calling program. The parameters in the parameter list are reference parameters, using the chaining, the copying, or the value/result method. Why, my subroutines can even call other subroutines if they want to. . . . I'm waiting for your response!'

(CONS('I love the way you quickly changed the subject—away from letters and numbers. But, OK, here's my response: I will add to my argument of input and output while describing my "subroutines," which I call Procedures. I don't need explicit input and output statements

Leverage: Tomorrow's UNIX-Based Mailing List System on Today's CP/M Machines

If you are now using a microcomputer to maintain a mailing list or membership list, then you should consider converting to *Leverage*. *Leverage* is a new information management system which combines full screen data entry, flexible record selection, and general purpose report generation and word processing capabilities in a well-structured, easy to use package. In fact, *Leverage* can outperform, feature for feature, any mailing list program now on the market. What's more, when you buy *Leverage* you get, at no extra charge, a program to convert your current data base to *Leverage*-compatible format. And since *Leverage* is written entirely in "C", the native language of the powerful UNIX operating system, you will be able to take the *Leverage* program and data bases with you when you upgrade to the next generation of UNIX-based micros.

For completed details on *Leverage*, including up-to-date information on conversion programs and hardware compatibility, use the reader service card or call us for a brochure and newsletter.

How to tell if it's a White Computer.

(Users 2 through 16 — multiuser expansion with high performance through distributed processing.)

Look for a single user CP/M® system that expands to multiuser configurations economically.

Look for independent 6 MHz Z80B-based User Modules with 64K of RAM memory, each module with a port to the user terminal capable of handling baud rates of up to 38K under program selection. Look for high-speed block data transfers from user modules to the Global Processor for disk storage. That way, CP/M programs run independently for each user. Fast. And each user's station acts just like the fastest standalone system — no delays, no waiting for other users.

Look for a Z80-based Global Processor for disk and tape I/O that transfers data from disk to user modules at the data transfer rate of the peripheral device. And a controller that handles as many as 8

SMD disk drives for up to 528 megabytes of hard disk storage, plus up to four 8" floppies, *plus* optional streaming tape backup.

And look for a Z80-based General I/O Processor that supports up to eight printers — with 64K bytes of independent buffer memory.

That's part of how you tell if it's a White Computer. There's a lot more. Here's a number and address for more information.

Technical Forum

because "data" is provided in the form of arguments in procedure calls and because the value produced by a procedure called at the top level is automatically output by my interpreter.

I have taken a good look at your basic structure—Blah! At my top level, your main program, I have no need for variable declaration, assignments, loops, tests, etc. This is so because usually the first environment where such things are meaningful is the environment established by a procedure called from my top level.

To show you how I "call" a procedure, I must first say that nearly all of my commands are procedure-related. And all of my procedures return a value—thus, they are function procedures.

First I define a procedure, then I call it—just the opposite of your goofy subroutines. To define a procedure, I merely say:

LISP PROCEDURE Name(parameter list)

Body

where the body is much like the body of your subroutines. It is simply instructions to perform the task of the procedure. Some of the instructions can even be Procedures themselves.

As far as calling goes, I don't even have to say Call. All I have to do is write the name of the procedure along with its parameter list, for in essence my procedures are functions.

Name(parameter list)

This is all that is needed. The parameters are usually values. But I can pass arguments in the unevaluated form—Name Parameters. And my procedures can call themselves: this is called recursion, the all-important function that you can't even handle. You're nothing but an old man that's constantly being updated. They'll soon phase you out. No recursion—ha ha!)))

PRINT*, 'OK, so I am old, but you ain't no spring chicken yourself. I have been doing a bit of research while you were babbling. We were both invented in the late '50s. So don't talk to me about old.

Oh, and there's one little thing you left out—how about Global Variables? You don't even have such a thing. Why, when I call a subroutine, I can have a COMMON statement in both the calling and the called routines, in which there are variables which are global to the called routine. They can be changed if need be by the called routine, or they can just be used in evaluations. These changes, if any, affect the values in the calling routine. Why, I can even name my common statements, like this:

COMMON /Name / variables

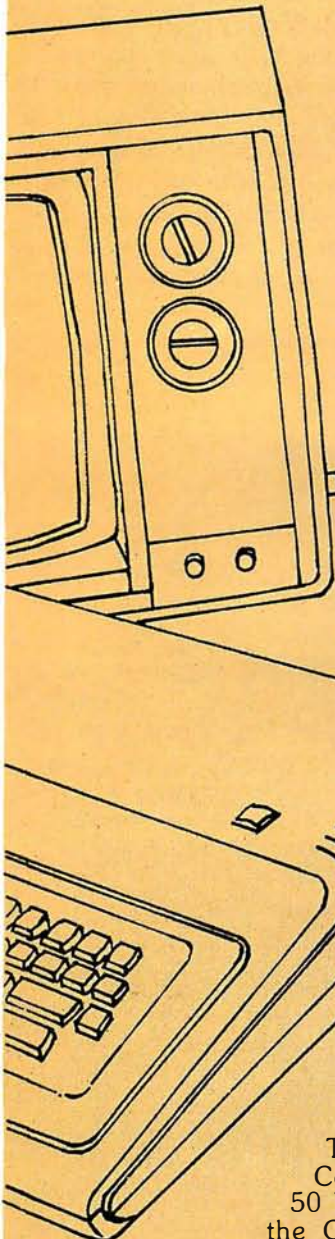

This way, different subroutines can have different globals with their calling routines. Can you top that????

(CONS('I sure can . . .))

Suddenly the lights came on. The humans were back. Oh well, their talk would have to wait. Maybe this place wouldn't be so bad after all. ■

Introducing the **COLOR CONNECTION™**

Plug A TRS-80* Color Computer into the World of System-50™ Computing.

Now you can expand Tandy's exciting new TRS-80* Color Computer using proven System-50 products. Expansion possibilities are limitless. And expansion is easy. Plug one end of the **COLOR CONNECTION** into the Program Pak* connector of the Color Computer. Plug the other end into a System-50 bus motherboard. Now add the functions you want, selecting from an inventory of standard modules manufactured by competent, long-established firms — from the inventory of solid performers, like **Percom Data Company**.

Mini-disk storage — today!

Available off-the-shelf for your extended system is Percom's field-proven LFD mini-disk system. The first choice of knowledgeable 680X computerists since 1977, Percom LFD mini-disk systems come complete, ready to plug in and run. File storage capacities range from 102 Kbytes for a one-drive LFD-400™ system to almost 0.6 Mbyte for a three-drive LFD-800™ system.

System Requirements

The **COLOR CONNECTION** interfaces a TRS-80* Color Computer to a System-50 bus motherboard. Power for the **COLOR CONNECTION** is obtained from the computer. Power for the extended bus cards must be provided by an external source, such as Percom's System-50 Power Supply. The **COLOR CONNECTION** provides for disabling the computer internal memory at 8-Kbyte boundaries to prevent contention with external memory.

The COLOR CONNECTION..... \$99.95

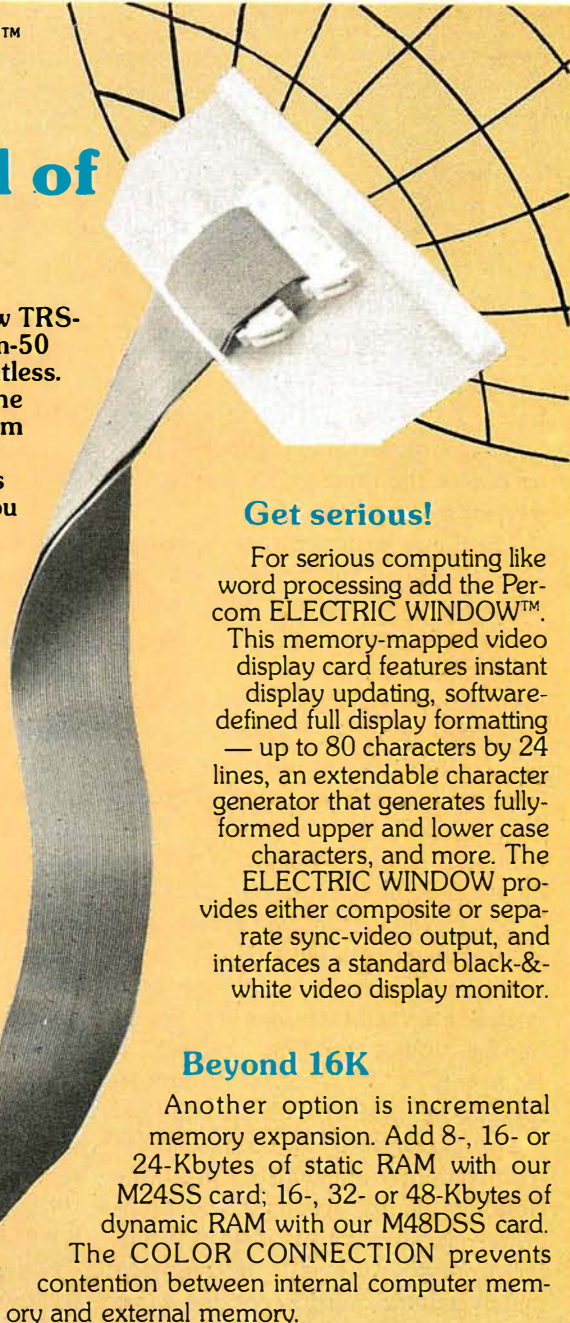

Quality Percom products are available at Percom dealers nationwide. Call toll-free, 1-800-527-1592, for the address of your nearest dealer, or to order direct from Percom.

PRICES AND SPECIFICATIONS SUBJECT TO CHANGE WITHOUT NOTICE.
PRICES DO NOT INCLUDE SHIPPING AND HANDLING.

™ trademark of Percom Data Company, Inc.

* trademark of Tandy Radio Shack Corporation which has no relationship to Percom Data Company.

Get serious!

For serious computing like word processing add the Percom **ELECTRIC WINDOW™**. This memory-mapped video display card features instant display updating, software-defined full display formatting — up to 80 characters by 24 lines, an extendable character generator that generates fully-formed upper and lower case characters, and more. The **ELECTRIC WINDOW** provides either composite or separate sync-video output, and interfaces a standard black-&-white video display monitor.

Beyond 16K

Another option is incremental memory expansion. Add 8-, 16- or 24-Kbytes of static RAM with our M24SS card; 16-, 32- or 48-Kbytes of dynamic RAM with our M48DSS card. The **COLOR CONNECTION** prevents contention between internal computer memory and external memory.

The right motherboard

Fast mini-disk storage, full-format alphanumerics and memory add-on are obvious expansion possibilities. The optional Percom System-50 Motherboard allows you to consider the less obvious. This seven-slot motherboard not only can be self-extended, but also can be extended with our 30-pin I/O motherboard. The richness of readily available peripheral interface cards provides an uncommon degree of expansion flexibility.

The System-50 (SS-50) bus community. With a TRS-80* Color Computer and the **COLOR CONNECTION**, it's your world. Enjoy!

Logo for Personal Computers

Harold Nelson, Technical Editor

The imminent release of not one but *two* versions of the Logo language for personal computers may be one of the most exciting software developments of the year.

The Logo programming language was developed at the Artificial Intelligence Laboratory at MIT (Massachusetts Institute of Technology). According to the Logo Project's originator and driving force, MIT Professor Seymour Papert, "Logo is the name of a philosophy of education in a growing family of computer languages...."

In the same passage, Professor Papert is quick to point out that Logo is not merely a children's language, although since its development over twelve years ago it has always been intended to facilitate discovery learning by young children. In fact, it represents a kind of "Copernican revolution." Rather than the child being programmed by the computer (as with computer-aided instruction), the child learns by *teaching* the computer—and has a good deal of fun in the process. In the past, this has been the overriding purpose of the Logo Project. However, Professor Papert states: "An example of a powerful use of list structure is the representation of Logo procedures themselves as lists of lists so that Logo procedures can construct, modify, and run other Logo procedures." (*Mindstorms: Children, Computers and Powerful Ideas*. New York: Basic Books Inc, 1980, page 217.)

Apple Logo and TI Logo are the first versions of this language that are intended for use with personal computers. TI Logo was developed for the Texas Instruments 99/4 computer, while Apple Logo runs on the Apple II or Apple II Plus computer. Each is a descendant of earlier implementations written in LISP and Pascal for larger computers, and this heritage is

evident in both versions of the language.

TI Logo

The first "draft" of Logo for the TI 99/4 was prepared by the Logo Project at MIT. Texas Instruments modified this draft according to its priorities and has done some impressive code compression in order to increase available memory for the production version of TI Logo.

Hardware for TI Logo

In addition to the TI 99/4 computer and a color monitor, memory expansion (from 16 K bytes up to 48 K bytes) and the language in EPROM (erasable programmable read-only memory) are the only requirements for running the prototype of TI Logo. In the prototype, both memory expansion and the language are contained in an actual black box (see photo 1, inset).

TI Logo has two production versions. The currently available version requires a disk controller, a 5-inch floppy-disk drive, a 32 K-byte memory expansion unit, and a TI Logo command module or ROM (read-only memory) cartridge. The second version, scheduled for release later this year, will require only the memory expansion unit and the command module (see photo 1).

Features

TI Logo can perform arithmetic operations on integers from -32,768 thru 32,767, and can generate random integers from 0 thru 9, perform basic logical operations, and evaluate

logical relationships. It can also assign numerical values to words (values to variables), assign names to numbers (so that something can be called by name instead of number), and it has functions for structuring and modifying lists. In addition, there is a fine program editor for writing and modifying procedures (Logo programs).

Other Logo features in Texas In-

Photo 1: The TI Logo prototype (inset), including memory expansion, is contained in the black box under the monitor and behind the TI 99/4 computer. The final production version of TI Logo, which should be available later this year, will consist of a 32 K-byte memory expansion unit and a solid-state command module. (Photo courtesy of Texas Instruments.)

struments' version include powerful yet easy-to-use graphics capabilities that employ a *turtle* for drawing and thirty *sprites* for creating dynamic displays.

The Turtle

One of the best-known features of Logo is turtle graphics, or the line-drawing turtle—a small triangle on the video display (see photos 2 and 3). A variety of simple instructions move the turtle, tell it to face a certain direction, move it a given distance, and instruct it to draw, not draw, or erase a line.

Early MIT versions of Logo actually controlled a floor robot that resembled a turtle. This floor turtle

had a pen that could be raised or lowered for tracing the path that the turtle was instructed to follow. Originally, the state of the art made use of a mechanical robot easier than computer graphics. When young children were involved, the floor turtle also seemed to facilitate the transition to using the screen turtle. (The significance of turtle graphics has been recognized outside MIT for some time. For example, a subset of Logo, called Turtletalk, has been included in the Smalltalk language designed by Alan Kay for Xerox. Turtlegraphics is also a program in the library of the Apple version of Pascal.)

TI Logo has a screen turtle that can

be controlled by simple primitive instructions (see text box on turtle primitives). These *primitives* can be used for immediate turtle instructions or to create *procedures* (sequential lists of instructions) which define new instructions.

An important feature of TI Logo is that while all primitives can be spelled out in full, many can be abbreviated to two-letter instructions (eg: CS can be used anywhere in place of CLEARSCREEN). Such abbreviations can make Logo more accessible to such nontypists as the very young or the handicapped.

Sprites

The inclusion of thirty sprites and

Photo 2: The turtle, shown at the top of the rightmost circle, has just completed a series of slightly displaced circles in order to produce this coil, or slinky-type, figure.

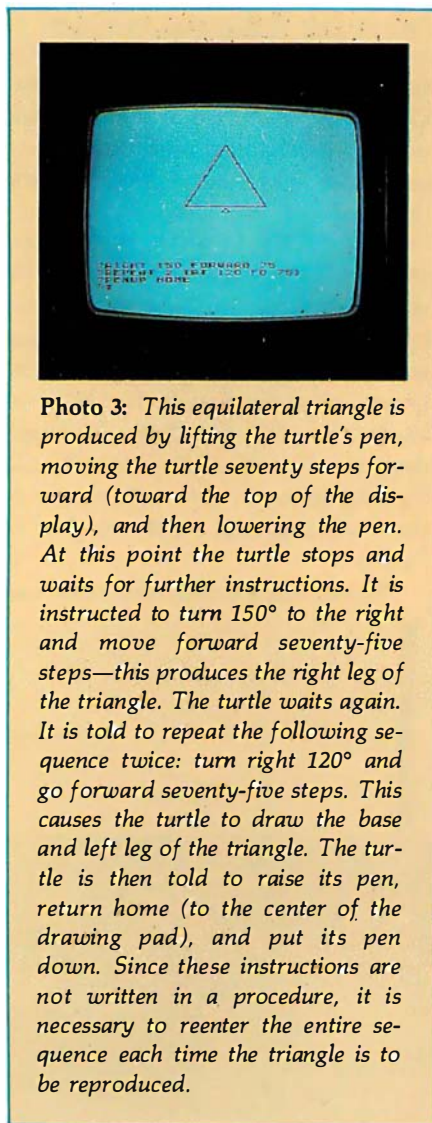

Photo 3: This equilateral triangle is produced by lifting the turtle's pen, moving the turtle seventy steps forward (toward the top of the display), and then lowering the pen. At this point the turtle stops and waits for further instructions. It is instructed to turn 150° to the right and move forward seventy-five steps—this produces the right leg of the triangle. The turtle waits again. It is told to repeat the following sequence twice: turn right 120° and go forward seventy-five steps. This causes the turtle to draw the base and left leg of the triangle. The turtle is then told to raise its pen, return home (to the center of the drawing pad), and put its pen down. Since these instructions are not written in a procedure, it is necessary to reenter the entire sequence each time the triangle is to be reproduced.

Photo 4: In this demonstration procedure provided by Texas Instruments, all thirty sprites have been told to carry the ball shape and move away from the center (home) position, each in a different direction.

dynamic sprite graphics is unique to TI Logo. As shown in photos 4 and 5a, sprites are TI Logo "beings" (software constructs) that assume various shapes and colors and move in a number of directions at different speeds. (See also listing 1.) Of themselves, sprites possess none of these "physical" characteristics—these must be given to them, once again, by use of simple primitives (see text box on sprite primitives).

Sprites can assume (carry) any one of twenty-eight possible shapes. The first six shapes (turtle, truck, plane, rocket, ball, and box) are predefined in TI Logo (see photo 6). The remaining twenty-two shapes must be user-defined.

A new shape can be created, or an existing one modified (you can change the six predefined shapes), by calling a 16 by 16 square MAKE-SHAPE grid (see photo 5b) and blacking out the desired shape. Each square of the grid represents one pixel (picture element) on the video display. The shape is formed (blacked out) by moving the cursor from square to square within the grid. Once a shape has been defined, any or all of the sprites can carry that shape.

(Displaying sprites seems to be a major capability of Texas Instruments' TMS9918A Video Display Processor. TI has released the TMS9918A, and the unit is beginning to appear in products from indepen-

dent manufacturers. See "Video Display Processor Simulates Three Dimensions," by Karl Gutttag and John Hayn, *Electronics*, November 20, 1980, page 123.)

Characters

TI Logo also allows you to define (or redefine) alphanumeric characters and static designs by using any of the 256 8 by 8 square grids, called *tiles*. Letters, numbers, and other keyboard characters are predefined tiles, but they can be changed. If the predefined keyboard characters are modified (eg: made lowercase), the modified character appears when the appropriate key is typed.

New characters or designs can be defined and placed anywhere on the display screen (see photo 5c). While tiles can be located anywhere on the screen, they cannot move about as

can shapes that are carried by sprites.

You can assign colors to tiles and use them in either the turtle or sprite modes to form titles, explanations, or parts of "pictures."

Procedures

Procedures can be considered as either Logo programs or definitions of words that, once defined, can be used like primitives. Procedures are lists of instructions made of primitives and/or the names of previously defined procedures (see photos 7a and 7b, and listings 1, 2, and 3). Resident or defined shapes, colors, and movements can be assigned to sprites in procedures. The turtle can be instructed to draw figures by simply entering the name of a procedure.

It is often easier to define procedures, whether they contain instructions for the turtle, the sprites, or nongraphic operations, rather than enter the individual instructions needed to carry out such tasks. One reason is that several sophisticated programming techniques become quite simple in Logo. It's possible to nest level upon level of procedures by having one procedure call another which, in turn, can call another, and so on. A nested procedure is called by entering its name as an instruction in the procedure being written. *Iteration* is accomplished by merely having the procedure repeat a list of instructions a certain number of times. *Recursion*

Photo 5: The shapes and characters used in the FISHBOWL (photo 5a) were specifically defined (see listing 1 for the procedures). Shapes are defined by blacking out the desired shape on a 16 by 16 square grid (photo 5b). Characters are similarly defined on an 8 by 8 grid (photo 5c).

is a simple matter of using the name of the procedure being defined as an instruction in that procedure—the procedure then calls itself from within itself.

It is also possible to construct a procedure so that it modifies itself. This can be done by having the procedure change the values of local variables and/or by having it define new, or modify already-nested procedures. This type of recursion causes the procedure to produce a different effect at each recursive level—the procedure performs its task, changes itself, performs its modified task, etc. Listing 2 demonstrates how these powerful concepts and techniques become virtual child's play with Logo.

In addition to the ease of writing procedures and all that can be learned in the process, there is another advantage to working with procedures rather than immediate instructions. After entering all of the individual instructions for the turtle or sprites, it would then be necessary to enter the entire sequence each time that activity was to be performed. If the instructions are included in a procedure, it's simply a matter of entering the procedure's name to have the activity performed. In addition, procedures, along with user-defined shapes and characters, can be saved for future recall. In the TI Logo prototype this is done on cassette. In the production

versions it will be possible to do this on disk—a preferable method with regard to both speed and reliability. The production versions of TI Logo have hard-copy capability via a thermal printer. In some settings this can be extremely useful.

The Editor

TI Logo has a full-screen, real-time edit mode that is extremely helpful for writing, modifying, and debugging procedures. While in the edit mode, the cursor can be moved anywhere in the displayed text to

Listing 1: The FISHBOWL procedure turns the video display into a simulated aquarium (see photo 5a) with fish swimming in various directions and bubbles rising to the surface. FISHBOWL first calls TITLE, which places the tiles (see photo 5c) containing the specially designed letters of "Fish Bowl" at the center bottom of the display. The FISHBOWL procedure then tells the background (BG) to set its color (SC) to dark blue (4), and calls the procedures FISHRIGHT, FISHLEFT, BUBBLES, and SHARK. These four procedures assign shapes, colors, and motion to various sprites. For example, FISHLEFT tells three sprites (4, 5, and 6) to carry the shape (7) of a fish swimming to the left (see photo 5b), and sets different colors, headings (SH), and speeds (SS) for each sprite. In BUBBLES, the SETX primitive is used to horizontally fix the two columns of bubbles. The numbers input are the x coordinates of the desired columns.

Photo 6: In addition to these six predefined shapes in TI Logo, the user can define as many as twenty-two additional shapes. Each of these can be carried by any or all of the sprites.

Photo 7: The pattern in photo 7a is produced by stopping the procedure, shown in the edit mode in photo 7b.

Turtle Primitives

The basic turtle primitives are virtually identical in TI and Apple Logo. Differences are noted in parentheses, as are acceptable abbreviations. All primitives can be fully spelled out and most can be entered as two-letter abbreviations.

The turtle mode is entered by the instruction TELL TURTLE (DRAW in Apple Logo). This places the triangular-shaped turtle at the center of the "drawing pad." In TI Logo this position is the origin of a coordinate system whose horizontal (x) axis goes from -128 to 128, whose vertical (y) axis ranges from -96 to 96.

There are four text lines under the pad for entering instructions and receiving messages. The Apple version is almost the same in the split-screen turtle mode (actually the horizontal axis goes from -140 to 138). This is normal turtle mode. Apple Logo, however, also offers a full-screen turtle mode that allows the turtle to draw on the entire pad but eliminates the text lines (see photos 9 and 10a).

Both versions employ the following instructions for moving the turtle:

FORWARD (FD) number } BACK (BK) number }	{ The number represents the number of turtle steps that the turtle is to move.
---	---

RIGHT (RT) angle } LEFT (LT) angle }	{ The angle represents the angle, in degrees, that the turtle is to turn.
---	--

It is possible to move the turtle anywhere on the drawing pad and trace virtually any shape with these instructions.

More interesting figures can be obtained by having the turtle draw only part of the time. The following commands, in both versions, control the turtle's pen:

PENDOWN (PD): Causes the pen to leave a trace of the turtle's path (the pen is down when the turtle mode is entered).

PENUP (PU): Allows the turtle to move about without leaving a trace.

PENERASE: Causes the turtle to erase a line it has drawn if the original path is retraced.

PENREVERSE: Instructs the turtle to draw lines where there are none and erase lines where they are present.

HOME sends the turtle back to the center of the drawing pad. **CLEARSCREEN (CS)** in TI Logo erases all drawing and text and returns the turtle to the home position. **DRAW** does almost the same thing in Apple Logo but it does not erase text.

In order to exit the turtle mode, enter the instruction **NOTURTLE** (NODRAW in Apple Logo). This will return you to the Logo monitor.

change, delete, or insert characters, words, or entire lines. It's also possible to move lines up or down and merge them with other lines.

The editor in the production version of TI Logo is automatically activated for writing procedures. (The prototype does not have this feature.) Several features can be written in the edit mode and all of them entered into memory by exiting the edit mode. One advantage to writing procedures in the edit mode is the ease with which you can change and correct the procedure as it is being written.

You can also use the editor's capabilities as a basic text editor. This is an important feature, since learning to write with a text editor relieves the tedium of making pencil-and-paper corrections and revisions.

Limiting Features

The video hardware of the TI 99/4 does not allow more than four sprites carrying shapes to be displayed on a horizontal row at one time (see photos 8a and 8b). If a fifth sprite is placed on the same row, the first one disappears, and so on. The process is reversible, so as soon as the newcomers move on, the original residents begin to reappear. Once you are aware of this problem, you can work around it.

An annoying occurrence in TI Logo is that the turtle sometimes runs out

Photo 8: These photos illustrate a slight problem caused by the TI 99/4's video hardware when running Logo. As long as there are no more than four shapes in a horizontal row, there is no difficulty (photo 8a), but as soon as a fifth shape is moved onto a row (the black square in photo 8b), the first shape in that row disappears (the red square that was at the center in photo 8a is gone in photo 8b). The first shape reappears when the fifth shape is moved to another row, so there can never be more than four visible shapes in a row at one time.

Photo 9: Apple Logo's turtle graphics can produce interesting figures from simple procedures. Straight lines can be drawn by setting the x and y coordinates. The turtle will draw a straight line from its present point to the point you have set. This photo and photo 10a show the full-screen graphics feature of Apple Logo.

of lines. At this point, the turtle stops in its tracks, the procedure halts, and the following message is printed:

NO MORE LINES

Apparently, workspace allocations have to accommodate both sprite and turtle graphics modes. Some tradeoff was necessary, and this message appears to inform you that the workspace (memory) allocated for graphics in the turtle mode has been used up.

Apple Logo

At present, the 5-inch disk version of Logo for the Apple II and Apple II Plus computers is still under development at MIT. (For convenience, we refer to this version as "Apple Logo," as does the Logo Project staff. To our knowledge there is no connection with Apple Computer Inc.) Representatives of MIT and the National Science Foundation, which funded portions of the Logo Project, are involved in discussions concerning distribution rights for Apple Logo. This issue should be resolved soon, and Apple Logo will, it is hoped, be available this summer.

This review is based on a pre-production prototype, and in fact, an updated prototype that will include color is being completed. This feature will allow you to choose the color of

the display background and the lines drawn by the turtle.

Apple Logo has three modes: a nongraphics mode, a graphics (turtle) mode, and an edit mode—but no sprites. However, the Apple version does have much more power in the other modes than TI Logo.

Hardware for Apple Logo

An Apple II or Apple II Plus computer with 48 K bytes of memory,

one disk drive, and an Apple Language Card are all that is needed to run the Apple version of Logo.

Nongraphic Features

Apple Logo can handle *floating-point* as well as integer arithmetic. It also accepts and outputs numbers (when large or small enough), in exponential notation. For example, $2.7E3$ can be used in place of $2.7 \times 10^3 = 2700$, and $-4.3N4$ can

Sprite Primitives

Some of the primitives used to instruct the sprites (available only in TI Logo) are as follows:

- TELL** sprite number(s): Gets the attention of the sprite(s) that you wish to address. You can address one or any combination of sprites from 0 thru 29. To talk to all thirty sprites, the phrase :ALL (read "dots ALL" in Logo jargon) is used in place of a number.
- CARRY** shape: Tells the sprite(s) which shape to assume. Shapes can be identified either by name or number.
- SETCOLOR** (SC) color: Identifies, either by name or number, the color of the shape being carried.
- SETHEADING** (SH) number: Gives the sprite(s) the direction to travel. The number entered corresponds to a compass heading.
- SETSPEED** (SS) number: Tells the sprite(s) how fast to move.

The displays produced with these five instructions can be amazing, especially when multiple instructions are combined in procedures.

A few other primitives can also be used in interesting ways. HOME causes all active sprites to go to the center of the display screen but, if they have headings and speed, only momentarily. FREEZE stops all active sprites and holds them in place. They will not resume movement until THAW is entered.

Sprites will also respond to the FORWARD (FD), BACK (BK), RIGHT (RT), and LEFT (LT) primitives as used in the turtle mode.

replace $-4.3 \times 10^{-4} = -.00043$.

Apple Logo can also return the sine and cosine of an input in degrees. This means, in effect, that it has full trigonometric capability. The other trigonometric functions can be easily defined in terms of the sine and cosine. Apple Logo can return a random integer in the range of 0 to $n-1$, where n is an integer input by the user. There is, in addition, a randomizing feature to ensure that each sequence of random numbers will be unique.

Apple Logo has features for evaluating logical relationships, assigning values to variables, words to numbers, and working with list structures. The Apple version of Logo also has provisions for going from Logo to the Apple monitor, calling machine-language subroutines, and determining the current amount of free workspace in Logo. (Texas Instruments omitted similar features in order to save memory space.) And it's worth pointing out that the primitives that instruct the turtle are similar in both the Apple and the TI versions of Logo.

Turtle Procedures

The draft of the Apple Logo manual, by MIT Professor Harold Abelson, contains over twenty-five pages of turtle geometry projects of rapidly increasing complexity (see photos 9, 10a, and 10b). This manual also contains some interesting discussions of recursion—in fact, the author suggests a level of recursion that can be used to have the turtle draw a “binary tree” (see listing 3).

The additional mathematical capabilities of Apple Logo, as compared with the TI version, can be used to increase the power of turtle procedures, even though these mathematical features are not graphics features *per se*. That is, the floating-point, trigonometric, and randomizing features can be employed to give straightforward instructions to the turtle that will result in figures otherwise difficult, if not impossible, to produce.

The Editor

The Apple Logo editor functions in

Photo 10: The SPINSLINK figure (photo 10a) is the result of the simple five-line SPINSLINK procedure (shown in the edit mode in photo 10b) that calls the three-line RCIRCLE procedure which, in turn, calls the RCP procedure. Each procedure is nested in the one listed below it. Note the use of floating-point arithmetic in RCP, the use of iteration in RCIRCLE, and the use of recursion in SPINSLINK (it calls itself). (The procedures are taken from the draft of the Apple Logo manual prepared by Harold Abelson.)

essentially the same manner as the production-version TI Logo editor. As soon as you begin to write a procedure, you're automatically in the edit mode. Therefore, all of the editor's features are available whenever procedures are being written. It is also possible, as with TI Logo, to employ these features as a text editor.

There is, however, one confusing sidelight. The command to abort a procedure (rub out what has just been written and exit the edit mode) in Apple Logo is very nearly the same command used in TI Logo to enter the procedure into memory and exit the editor. This could cause considerable confusion if you work with both versions side by side.

An Annoying Feature

If the turtle tries to draw beyond the drawing pad in the turtle mode of Apple Logo, everything stops and you are told that the turtle just went OUT OF BOUNDS. If you are in the process of modifying a procedure to fit onto the pad, this is quite a nuisance. In the TI version, if the turtle leaves his pad he simply wraps around the display, and the procedure continues to execute. This approach seems preferable, because you can visualize the finished product. (In the large-machine versions of Logo you can choose between wrapping and not wrapping—an ideal arrangement.)

Conclusions

Both personal computer versions of Logo are exciting, valuable products. Seymour Papert has said on more than one occasion that Logo provides easy access to very powerful ideas, but the question remained—would this be true of Logo designed for small personal computers? The answer, relative to both versions, is clearly affirmative, whether the user is a young child, a physically handicapped individual, or an adult who discovers computing for the first time.

It's difficult to find anything to criticize in either product. Given their common background of over ten years of development and testing in the Logo Project at MIT, such a situation is not hard to understand. Still, a few items in each version might have been handled differently.

One such example occurs when you attempt to use the Apple and TI Logo nongraphics instructions in the immediate mode. These functions do not simply return a value. For example, in TI Logo:

3+4

returns:

TELL ME WHAT TO DO WITH 7

It will not return just the value 7. Similarly, in Apple Logo:

SIN 30

Introducing MuDOS.* The rest of the works for networks.

A CP/M** compatible replacement for CP/NET**

MuDOS multiplies your micro capabilities with higher throughput, increased reliability and extra professional features for both single and multi-user environments. MuDOS works with any Z80-based micro, in place of CP/NET, MP/M**, or CP/M — and, of course, with MuSYS NET/80* and EXP/80* network slaves.

MuDOS works faster — MuDOS makes the most of the Z80's extra registers and instructions. Program loading is up to six times faster; file processing functions average three to five times faster than CP/M.

MuDOS works smarter — A sophisticated buffer manager, a totally re-entrant file manager, multiple print queuing, disk file support to 67MB, drive support to 2000MB and read-after-write verification of disk updates helps you make the most of your multi-user data and word processing pro-

grams. Modular design allows us to tailor the system to your configuration.

Build your network with MuSYS — MuDOS is ideal for use with our NET/80 board (64K RAM, single level interrupt, console port and parallel port for bus communication) and our EXP/80 expansion board (another serial port, Centronics port, priority interrupt control, real time clock, etc.) for S-100 based systems.

This is the year of the network —

Make sure you have the works.

returns:

YOU DON'T SAY WHAT TO DO WITH .5

The reason for this, apparently, is that these functions are intended for use in instructions in procedures where the value returned will be used for a variable. It would be useful, however, if these functions could be used immediately, and if they returned only the appropriate values: they could then be used more easily for mathematical or logical evaluations, either in planning procedures or for other purposes.

If you type PRINT in front of the statement to be evaluated, only the value is returned. For example:

```
PRINT 3+4
```

will return only the value 7. Still, it would be useful to obtain this kind of return without typing PRINT, especially when you are not "talking" to sprites or the turtle.

Another inconvenience occurs in TI Logo when you have active sprites on the screen and want to go to the turtle mode. There is no easy way to get the active sprites off the video

display. While you can go from the turtle mode to the sprite mode and remove the turtle with everything it has drawn (by entering NOTURTLE), the reverse is not possible. You can leave the sprites there and work with the turtle, but the moving sprites can be distracting. You can also enter the necessary instructions to remove the colors, shapes, speeds, and headings of the sprites, but this can be time consuming. A third alternative is to leave Logo and then restart it. This is often the quickest solution. In any case, it would be helpful to have a single command that would remove all active sprites from the video screen.

There may be features in the production versions of Logo that are not present in the prototypes—in addition to the possibility of color in Apple Logo, there is discussion of including music capability in both personal computer versions of Logo. Texas Instruments has mentioned this possibility, while the Apple Logo documentation already contains some explanation of how to use the music features, even though they are not present in the prototype.

The prototypes of Apple and TI Logo are currently being used in pre-

school through high school classrooms (see *onComputing*, Summer 1981, for details) on a "pilot project" basis, and evidence of its value to students is growing rapidly. This evidence deals not only with amount of material learned, but also with a heightened self-awareness and self-esteem derived from the student controlling a powerful machine and thus his or her own learning. It seems inevitable that Logo will become a forceful learning tool, both in the school and in the home.

Having acquired at least a passing familiarity with these two Logo implementations, I see them as complementary, rather than competitive. Anyone who is seriously interested in education and learning on any level should examine both versions. TI Logo easily attracts user interest (the sprites are a definite attention-getter) and it encourages fundamental exploration of a variety of significant concepts. Apple Logo provides a somewhat deeper exploration of the same concepts. The development of Logo for other popular personal computers such as the Radio Shack TRS-80 and Atari will probably not be far behind. ■

Listing 2: The COILGROW procedure has CIRCLEMOVE and CIRCLE nested within it. CIRCLE, in turn, is nested in CIRCLEMOVE. Both COILGROW and CIRCLE employ iteration by repeating the instructions in the brackets. COILGROW is a recursive procedure—it calls itself. COILGROW produces a coil consisting of connected circles of increasing diameter. The procedure is run by entering its name and values for the variables NUMBER, DISTANCE, and ANGLE. (The 360/(:ANGLE) in CIRCLE causes an interesting "bending" of the coil, since it returns an integer that may be slightly more or less than the number of iterations required to produce an exact circle. HIDETURTLE, in the CIRCLE procedure, speeds up drawing since the turtle itself need not be redrawn at each "step." SHOWTURTLE causes the turtle to reappear.)

```
TO COILGROW :NUMBER :DISTANCE :ANGLE
REPEAT :NUMBER [CIRCLEMOVE :DISTANCE :ANGLE]
CIRCLE :DISTANCE :ANGLE
MAKE "ANGLE :ANGLE-3
COILGROW :NUMBER :DISTANCE :ANGLE
END
```

```
TO CIRCLEMOVE :DISTANCE :ANGLE
CIRCLE :DISTANCE :ANGLE
FORWARD :DISTANCE
END
```

```
TO CIRCLE :DISTANCE :ANGLE
HIDETURTLE
REPEAT 360/(:ANGLE) [FORWARD :DISTANCE RIGHT :ANGLE]
SHOWTURTLE
END
```

For More Information

To add your name to the Apple Logo mailing list, write: Apple Logo, The Logo Project, 545 Technology Square, Cambridge MA 02139. For \$1 they will also send a bibliography of papers produced in conjunction with the project.

For information on TI Logo, write: TI Logo, Texas Instruments Inc, Corporate Engineering Ctr, 12860 Hillcrest Wing E M/S 376, Dallas TX 75230.

Listing 3: MYSTERY requires that an integer be input for the variable NUMBER. It then prints the integers 1 thru NUMBER in an unexpected order: the STOP in the recursive procedure produces the MYSTERY effect; when the technique is used in a V-drawing procedure, the turtle can draw a "binary tree."

```
TO MYSTERY :NUMBER
IF :NUMBER = 0 STOP
MYSTERY :NUMBER-1
PRINT :NUMBER
END
```

CRYSTALWARE

At Crystal we are doing our best to provide the finest state-of-the-art graphic adventure software in the world. Our list of credits include the first indoor-outdoor graphic adventure, the first multi-disk graphic adventure, and now for the Atari, the first graphic adventure in the world which includes screen scrolling and animation. The era of the text adventure and games which are simple combinations of static graphics and text is rapidly drawing to a close. We attempt to utilize the full potential of your computer. True, many of our games use up to 48K and we only deal in disk products, but there are a lot of users out there who have worked hard to upgrade their systems to the max and we think they deserve games that will give their computer system a run for its money.

FANTASYLAND 2041

Brand new and available June 1 on Apple and Atari, it has over 520 full screens of graphics and occupies more than 500,000 bytes on disk. Step into the world of tomorrow's fantasy as you enter the Hall of Heroes. Wander through exhibits and equip yourself for your perilous journey through 6 graphic adventures with Crystalsonics and on the Atari, our revolutionary new scrolling techniques written by Mike Potter. Rescue the fair prince(ss) from the depths of Hell and make it back alive. You will need 40K and joysticks on the Atari version.

CONGOLAND: In deep dark Africa search for the lost mines of King Solomon. Treacherous jungle and man-eating tigers stalk you. Battle the fierce gorillas and consult the witch doctor.

ARABIAN ADVENTURE: Lost in the desert you lead a caravan of brave warriors. Graphic sandstorms and deadly cobras dog your path. Hidden in the ruins are priceless treasures and somewhere in the Evil Mountains hides the Black Sorcerer who you must pass to get to . . .

OLYMPUS: In search of the golden fleece, board your ship the Athena and sail the ancient Aegean Sea. Set your sails with care and beware of typhoons and sea monsters. This adventure alone occupies 80 screens of graphics. You may land on islands and disembark to explore. The Cyclops awaits your coming and Circe the Enchantress may turn you and your crew into swine. You seek the legendary Thera, gateway to Atlantis, and as you anchor you will descend into the depths . . .

KING ARTHUR: In merry old England in the days of Arthur, you head a party of brave knights. As you embark from Camelot on your quest, you seek the fair prince(ss) and the Holy Grail. The Black Forest conceals Modred the Traitor. In the Emerald Mountains lurk Herman the Dragon and Merlin the White Magician. Beware of the Enchanted Forest and the Sea of Mists.

THE PRIZE! To the bravest of our Adventurers on the Apple and Atari versions of Fantasyland 2041 will go a \$1000.00 cash prize and a trophy which will be awarded in December. Details on this contest are in the game manual. In addition to this supergame we also have many other fine graphic adventures which we haven't room to describe here. If you would like a catalog please send \$3.00 to cover postage and handling to the address below.

HOUSE OF USHER	\$29.95	BENEATH THE PYRAMIDS	\$29.95	WATERLOO II	\$49.95
GALACTIC QUEST	\$29.95	LITTLE CRYSTAL	\$39.95	SANDS OF MARS	\$39.95
WORLD WAR III	\$29.95	IMPERIAL WALKER	\$29.95	FANTASYLAND 2041	\$59.95

CRYSTAL USERS CLUB: If you would like a subscription to our magazine CRYSTAL VISION, a free copy of House of Usher for your system, and quarterly copies of our software bank, please send an original or public domain program to us along with a \$10.00 membership fee.

WE ARE INTERESTED IN YOUR PROGRAMS: With over 800 distributors in 30 countries we can offer you 35% of the gross royalties in exchange for quality business or game software. Sales may range from 10,000 to 50,000 copies. If you are a quality programmer, have written a good game, and would like to retire before 30, give us a call.

It is our intention to provide you with the finest game software available today. We are always open to feedback and are genuinely interested in knowing what you the adventurer expect and desire in a fantasy game. Feel free to call either of us and we or our staff will be glad to hear any constructive suggestions you might have.

John Bell *Patty Bell*

You must have a disk drive and an Apple II 48K or Atari 800 40K or Pet 32K or TRS-80 48K to run our adventures.

Our order lines are open 24 hrs. a day 7 days a week.

Build a Low-Cost Speech-Synthesizer Interface

Recently I was at a local electronics store looking at DVMs (digital voltmeters). I didn't want to buy one, but, like looking at new cars, I wanted to reestablish the cost-effectiveness of what I already owned.

Most of the meters in the showcase were 3½-digit units with five or more ranges and many ancillary functions. The sales pitch for every one sounded alike.

While not trying to be cute, I stopped the clerk in midsentence and asked if he had any DVMs that "talked." He completely ignored the question. I had to interrupt him twice

Steve Ciarcia
POB 582
Glastonbury CT 06033

to get his attention, and even then, he thought I was being difficult.

Eventually, he said that he had no talking DVMs and never expected to see any. Even though I anticipated his answer, I was testing his response to the idea. Considering that we now have talking toys, talking hand-held DVMs shouldn't sound that strange. In fact, such use would be a relatively minor application of synthesized speech. Someday they will be very common.

While I wouldn't consider this salesman a total loss, there are some

people who have to go to Missouri to believe the state exists. I trust, however, that you have an open mind to new technology.

Cost-Effective Speech Synthesis

Advances in the production of high-density LSI (large-scale integrated) circuits and new techniques to synthesize speech have reduced the cost of voice-output systems dramatically. Attaching a speech synthesizer to your computer is now as reasonable financially as adding any other peripheral device.

The cost of a synthesizer is a function of the number of words the synthesizer can speak. Limited-vocabulary synthesizers, such as the TMS0280 unit in the Texas Instruments Speak & Spell toy or any others that have their vocabulary stored totally in ROM (read-only memory), are generally less expensive. Speech interfaces using phoneme synthesis, such as the Votrax SC-01, usually require the help of a computer program running on an external processor to generate extensive voice output. The added complexity makes this type of synthesizer more expensive. Of course, a phoneme synthesizer can have an unlimited vocabulary by using a text-to-speech program running on the external processor.

This article describes the construction of a cost-effective limited-vocabulary voice-synthesis speech-processor board called the Micromouth. It uses the new Digitalker DT1050 integrated circuit set from National Semiconductor, which has a stored vocab-

Photo 1: Assembled Micromouth speech-processor board. The 40-pin integrated circuit is the MM54104 speech processor, and the two 24-pin packages are 64 K-bit ROMs, which contain 144 digitized expressions. The 40-pin edge connector on the right is plug-compatible with the Radio Shack TRS-80 Model I, and the 50-pin edge connector on the bottom is plug-compatible with the Apple II. The heat sinks shown in the photo are not generally required but were included on this particular unit for testing.

Digitalker is a registered trademark of National Semiconductor Corporation.

ulary of 144 expressions. For about \$120, you can build this board and add voice output to monitoring functions, computer games, and calculations. It can say "The time is 6:40 pm" and "Number 4 is set at 6.35 volts"

just as easily as "Control error..." or "Danger...a star is on the left at 8.2 million meters." While a limited-vocabulary synthesizer may never have appealed to you before, I am sure the low price and simple system integra-

tion of this speech interface will spark your interest.

The Micromouth speech-processor board I am presenting is plug-compatible with the Apple II and Radio Shack TRS-80 Model I computers. (It can be used with the TRS-80 Model III with an adapter cable.) It is signal-compatible with other microcomputers, such as the Digital Group product line or the Heath H-8, and can be connected to any computer with an 8-bit parallel I/O (input/output) port, such as a printer port. It requires no external controlling software except a simple BASIC statement to say any expression in its vocabulary. For example, executing OUT 127,120 on the TRS-80 (or POKE -16001,120 on the Apple II) will cause the board to say "Please."

The design and features of the Micromouth speech-processor board are discussed in detail here. But, first, a little background on speech-synthesis techniques, in general, and then details of National Semiconductor's Digitalker system, in particular.

Speech-Synthesis Techniques

Three techniques are presently used to synthesize the human voice: formant synthesis, linear-predictive coding, and waveform digitization. They differ primarily in the number of bits per second of data required to construct a word.

Formant synthesis is essentially a modeling of the natural resonances of the human vocal tract. The bands of resonant frequencies defined are called *formants*. In an electronic synthesizer, these frequencies are generated by excitation sources and are then passed through variable-parameter filters.

One form of the formant technique is called *phoneme synthesis*. In this, the spectral parameters are derived from basic sound units that make up words. A phoneme generator, in turn, reproduces these sounds. In such a circuit, each phoneme has been assigned a code, and the synthesizer module (or chip) utters the corresponding phoneme sound for each code it receives. Creation of continuous speech, therefore, is simply a

Photo 2: Micromouth speech-processor board shown inserted in peripheral slot 1 of an Apple II computer. Execution of a simple BASIC statement can cause any of the stored vocabulary to be uttered. For example, to make it say "This is Digitalker," a POKE -16001,0 statement would be executed. While the rest of the vocabulary has a male voice, this particular expression has a distinctly female voice.

Photo 3: National Semiconductor's DT1000 Speech-Synthesis Evaluation Board. Available from National Semiconductor distributors for \$495, the DT1000 contains a microprocessor equipped with a program that allows a user to hear any single expression or a combination of expressions by entering the appropriate decimal code on the keyboard. While all the I/O lines are available on the Evaluation Board connector and it could be used as a general-purpose speech interface, it is more suitable as a sales tool and demonstration device.

System Log

3:10 P.M. - System Down!

4:45 P.M. - Problem diagnosed using
DIAGNOSTICS II.

Board replaced and
system back on line.

DIAGNOSTICS II

Diagnostics II is SuperSoft's expanded Diagnostic package.

Diagnostics II builds upon the highly acclaimed Diagnostics I. It will test each of the five areas of your system:

Memory Terminal Printer CPU Disk

Every test is expanded.

Every test is "submit"-able. A "submit" file is included in the package which "chains" together the programs in Diagnostics II, achieving an effective acceptance test. All output can be directed to a log file for unattended operation, for example over night testing. Terminal test is now generalized for most crt terminals. A quick-test has been added for quick verification of the working of the system.

The memory test is the best one we have encountered. It has new features, including:

- default to the size of the CP/M Transient Program Area (TPA)
- printout of a graphic memory map
- bank selection option
- burn in test
- memory speed test

Diagnostics-II still includes the only CPU test for 8080/8085/Z80.

A Spinwriter/Diablo/Qume test has been added, which tests for the positioning and control features of the Spinwriter/Diablo/Qume as well as its ASCII printing features. (Serial Interface only)

And, as with all SuperSoft products, a complete online HELP system and user manual is included.

Price: \$100.00 (manual only): \$15.00

Requires: 32K CP/M

CP/M Formats: 8" soft sector, 5" Northstar, 5" Micropolis
Mod II, Vector MZ, Superbrain DD/QD

First in Software Technology

matter of stringing the phonemes together.

In most cases, the electronic voice generated is quite intelligible, but it may have a mechanical quality about it. Continuous speech using phoneme synthesis can generally be generated with a data rate of less than 400 bps (bits per second). This technique is used by the Votrax Division of Federal Screw Works in the SC-01 Speech Synthesizer Chip and other products.

Linear-predictive coding is similar to formant synthesis. Both techniques are based in the frequency domain and use similar hardware to model

The Digtalker speech processor uses a comprehensive data-compression algorithm.

the vocal tract. Rather than using a simple phoneme code, however, linear-predictive coding stores parameters for filter coefficients, gain, and excitation frequencies. The term "linear-predictive coding" refers to the programmed activities of the multistage lattice filters that produce the desired formants. Adequate-quality speech can generally be achieved with data rates of 1200 to 2400 bps. This synthesis technique is used by Texas Instruments in several products, including the Speak & Spell and the TI 99/4 Text to Speech Translator. It is also used by General Instrument Corporation in its Orator VSM2032 Voice-Synthesis Module.

The third method is *waveform digitization*. This very old technique produces speech by generating a waveform with the time-domain characteristics of voice, in contrast to the previously considered parameter-encoding methods, which represent speech in terms of frequency. The simplest form is uncompressed digital data recording, called PCM, for pulse-code modulation. (In the June 1978 BYTE, my article entitled "Talk to Me: Add a Voice to Your Computer for \$35," page 142, discussed how to build a simple digitized speech interface.)

**"And in conclusion,
I'll only use
my exceptional powers
for the good of mankind."**

"That's a vow all we Vector 3005s make. And it's not one we make lightly.

"After all, being the only product on the market with a Vector 3 terminal, a 5¼" floppy, and a 5¼" Winchester rigid disk drive that provides 5 megabytes of storage is quite a responsibility. It used to take 20 floppies to give you that kind of capacity.

"Our powers don't stop there, however. Each 3005 also comes with a 32-bit error-correcting code — the first time sophisticated IBM-style technology has been available on a small business system. This lets us detect and correct errors, and almost completely eliminates data loss on disks due to dirt, wear, or damage.

"All this makes us pretty awesome, all right. But there's more. When coupled with Vector's MEMORITE III and EXECUPLAN software packages, we give you a 30,000 word dictionary, the ability to create your own phrase library, a teaching manual right on the screen, pass word security, plus a host of other word processing capabilities as well as financial planning, forecasting and basic accounting.

"And we're reliable. Our powers won't diminish, our abilities won't fade, and dedication to mankind won't weaken.

"For more information and your nearest dealer, call Vector at 800-423-5857. In California, call 800-382-3367. Or write to them at 31364 Via Colinas, Westlake Village, CA 91362.

"Thank you all for coming today. And I hope we'll have the chance to do business together in the future."

VECTOR
VECTOR GRAPHIC INC.

COMPUTERS FOR THE ADVANCEMENT OF SOCIETY.

In simple PCM recording, the analog speech waveform is sampled at a rate twice that of the frequency of the highest voice component and converted to digital format through an A/D (analog-to-digital) converter. Once stored, the digital signal can be played back through a D/A (digital-to-analog) converter and a low-pass filter. One major advantage of digitally encoded speech is its human-like quality. Since it is in essence a recorded voice, the reproduced speech retains the inflections and ac-

cents of the original voice. Thus, in addition to male and female voices, it is possible to have a speech synthesizer that reproduces regional or foreign accents. The clarity of the reproduction depends on the speech-compression method used.

Unfortunately, one problem in using PCM alone is that it requires very high data rates. Rates above 100 k bps are not unusual with this method. To reduce the data rate, it is necessary to compress the speech data to remove redundant information.

One compression method is called *delta modulation*. As in PCM, the analog speech waveform is sampled, but this time only the *changes* in amplitude (delta values) between samples are stored. Since speech contains many redundant sounds and silences, these changes are much smaller than the absolute amplitude of the waveform, and fewer bits are required to store the smaller values. Delta modulation, therefore, reduces the amount of memory required to store a list of words.

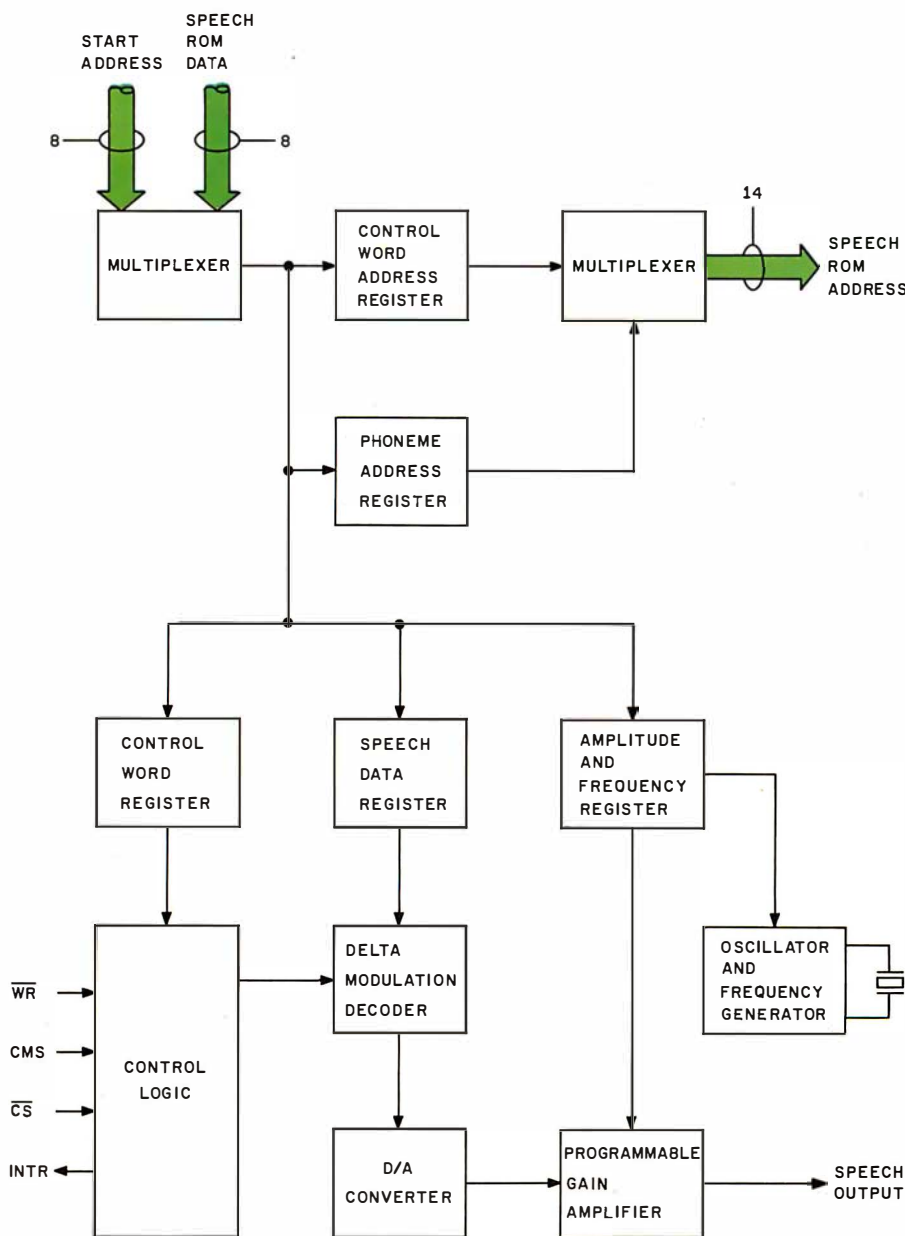

Figure 1a: Block diagram of the National Semiconductor Digitalker MM54104 speech-processor chip. This figure and figure 2 were provided through the courtesy of National Semiconductor Corporation.

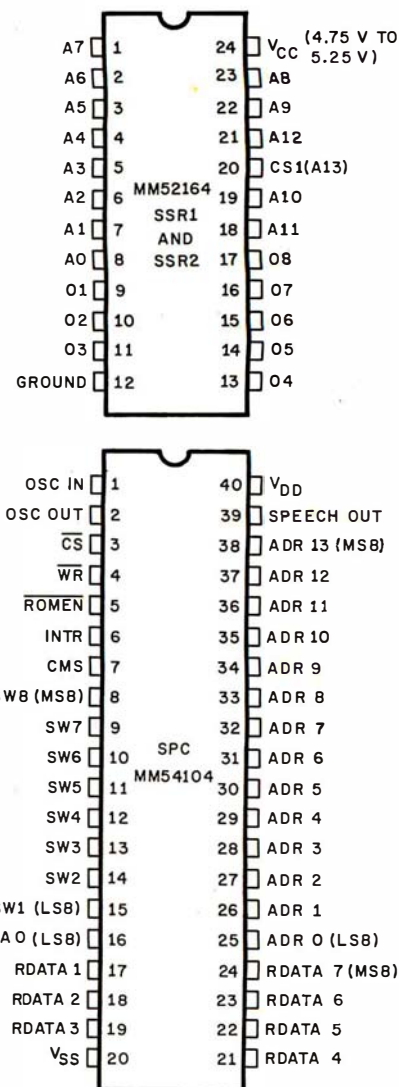

Figure 1b: Pinout specifications of the DT1050 system, which comprises the MM54104 speech-processor chip and the associated MM52164 SSR1 and SSR2 ROMs (read-only memories). The ROMs are designed to be used in sets of two; the chip-select (CS1) signals are set up in complementary fashion.

YOU HAVE 10 DAYS TO DISCOVER THE COMPUTER AGE.

If you've never used a computer, you're missing something. Programming your own computer is more fun than playing backgammon. More challenging than crossword puzzles.

And more practical than about anything else you could do.

Because the fact is, you're living in the age of computers. And now you can discover what it's all about. For 10 days, at no risk and no obligation, you can have your very own Sinclair ZX80 computer. To play with, experiment with, learn with.

ANYONE CAN USE IT.

You'll discover the ZX80 is incredibly easy to use for anyone 10 years or older. You don't have to know anything about computers when you start out. We'll send you a complete 128-page guide that takes you step-by-step into the world of computing. In one day, you'll be writing your own programs!

The ZX80 will absorb you for hours as you find new ways to use it. You can create games. Home budgets. Math lessons for your children. Almost anything, in fact.

THE ZX80 IS YOURS FOR 10 DAYS. THE COMPUTER GUIDE IS YOURS FOREVER.

For your 10-day home trial, just call our toll-free number and order with your Master Charge or VISA. Or send the coupon along with a check or money order for the remarkably low price of \$199.95, plus shipping. (Other personal computers cost two or three times as much!)

And we'll send you the Sinclair ZX80 personal computer. It's yours for 10 days. If you decide you don't want to keep it, then send it back. We'll give you a full refund. Either way, the 128-page guide to computing—a \$5.95 value—is yours to keep as a free gift.

But we have to be honest with you. After you've discovered the fun of owning a ZX80 computer, we don't think you'll send it back.

EVERYTHING YOU NEED. For just \$199.95, you get everything you need to operate your ZX80. You just hook it up to your TV (either black & white or color). Then to store your programs, you can use any ordinary cassette tape recorder. We'll also send you a 128-page guide to computing that's yours to keep as a free gift.

\$199.95

For an extra \$49.95, you can also have the Sinclair Computer Learning Lab—a set of 100 experiments and lessons on cassette tapes that make the ZX80 itself your teacher.

10-DAY MONEY-BACK HOME TRIAL CALL TOLL FREE 800-543-3000.

SINCLAIR RESEARCH LTD., ONE SINCLAIR PLAZA, NASHUA, N.H. 03061

Ultimately, the total amount of memory required for continuous speech becomes a function of exotic compression algorithms. Data rates as low as 2400 bps have been achieved. The Digitalker speech-synthesis chip set uses data-compressed digitized speech.

Digitalker Components

The Micromouth synthesized-speech-processor board is based upon the National Semiconductor

Digitalker DT1050 speech-synthesizer chip set, which consists of a speech processor (SPC) and two 64 K-bit ROMs (read-only memories).

The speech processor uses PCM encoding with a comprehensive data-compression algorithm developed by Forest Mozer at the University of California, Berkeley. The primary compression method employed is delta modulation. As previously described, this concept recognizes that speech waveforms are generally

smooth and continuous. Rather than storing the absolute amplitude of the voice signal, the differences between successive samples are stored instead. During speech reconstruction, successive amplitudes in the output waveform are obtained by adding these delta values to the previous values, allowing us to avoid using large numbers of bits to store large voltages.

The speech processor also uses phase-angle adjustment and half-

Table 1: The 144 spoken expressions in the vocabulary of the standard Digitalker system, with word-access codes in decimal and binary. The "ss" expression is a generalized hissing sound provided to make plurals out of other words in the list. If an address greater than 143 is sent to the speech processor, it "executes data" and nonsense sounds are generated.

IT WAS INEVITABLE

Sooner or later, someone had to take all this proven microcomputer hardware and software technology and wrap it up in a portable package at a price that shocks the industry. Adam Osborne decided to do it sooner.

The OSBORNE 1®, from Osborne Computer Corporation. You get full CP/M® disk computer capabilities—Z80A® CPU, 64K bytes of RAM memory, a full business keyboard, a built-in monitor, and two floppy drives with 100K bytes each of storage. You get two interfaces, the IEEE 488 and the RS-232C. Just connect a printer, via either interface.

Software? You get CP/M®, CBASIC-2®, Microsoft BASIC®, the WORDSTAR® word processing system with the MAILMERGE® mailing list feature, and the SUPERCALC® electronic spreadsheet package. All standard. All for \$1795.

And it's *portable*. When the keyboard is clipped over the display panel, only the weatherproof brushed aluminum case is exposed. (There are even optional modem electronics, couplers, battery packs, and external monitor connections, providing practically unlimited system portability.)

It's all business. The OSBORNE 1 delivers *significant* productivity at an irresistible price. At \$1795, its immediate and lasting success as a personal business computer is, quite simply, inevitable.

\$1795

OSBORNE

COMPUTER CORPORATION

26500 Corporate Avenue Hayward, California 94545 (415) 887-8080

period zeroing compression techniques. Phase-angle adjustment is based on the concept that the intelligibility of speech is not affected by the phase angle of the sine-wave components of the Fourier-transformed waveforms. Therefore, these values can be adjusted to produce a waveform with mirror symmetry; only half the data need be stored.

In half-period zeroing, the low-amplitude portions of a signal are reproduced as silence. For the most part, only the center half of any pitch period needs to be stored since the center half contains most of the energy. The remainder of the wave-

form is relatively insignificant and can be discarded.

The 144-expression Digitalker vocabulary was initially recorded

The Digltalker system Introduces low-cost speech output into areas where the ex- pense has not been previously justified.

through a microphone, then differentiated and digitized. A computer program operated on the data to perform

phase-angle adjustment, delta modulation, and half-period zeroing. The redundant pitch periods and phonemes were reduced to individual stored periods and a record of the number of times they are repeated (usually 3 to 8 times). The resulting data containing frequency, amplitude, and control information is stored in the two 64 K-bit speech ROMs.

Figure 1a is a block diagram of the speech-processor chip. Each block of speech data contains a control word specifying the location in ROM of an audible expression, the type of waveform generated, and the number of

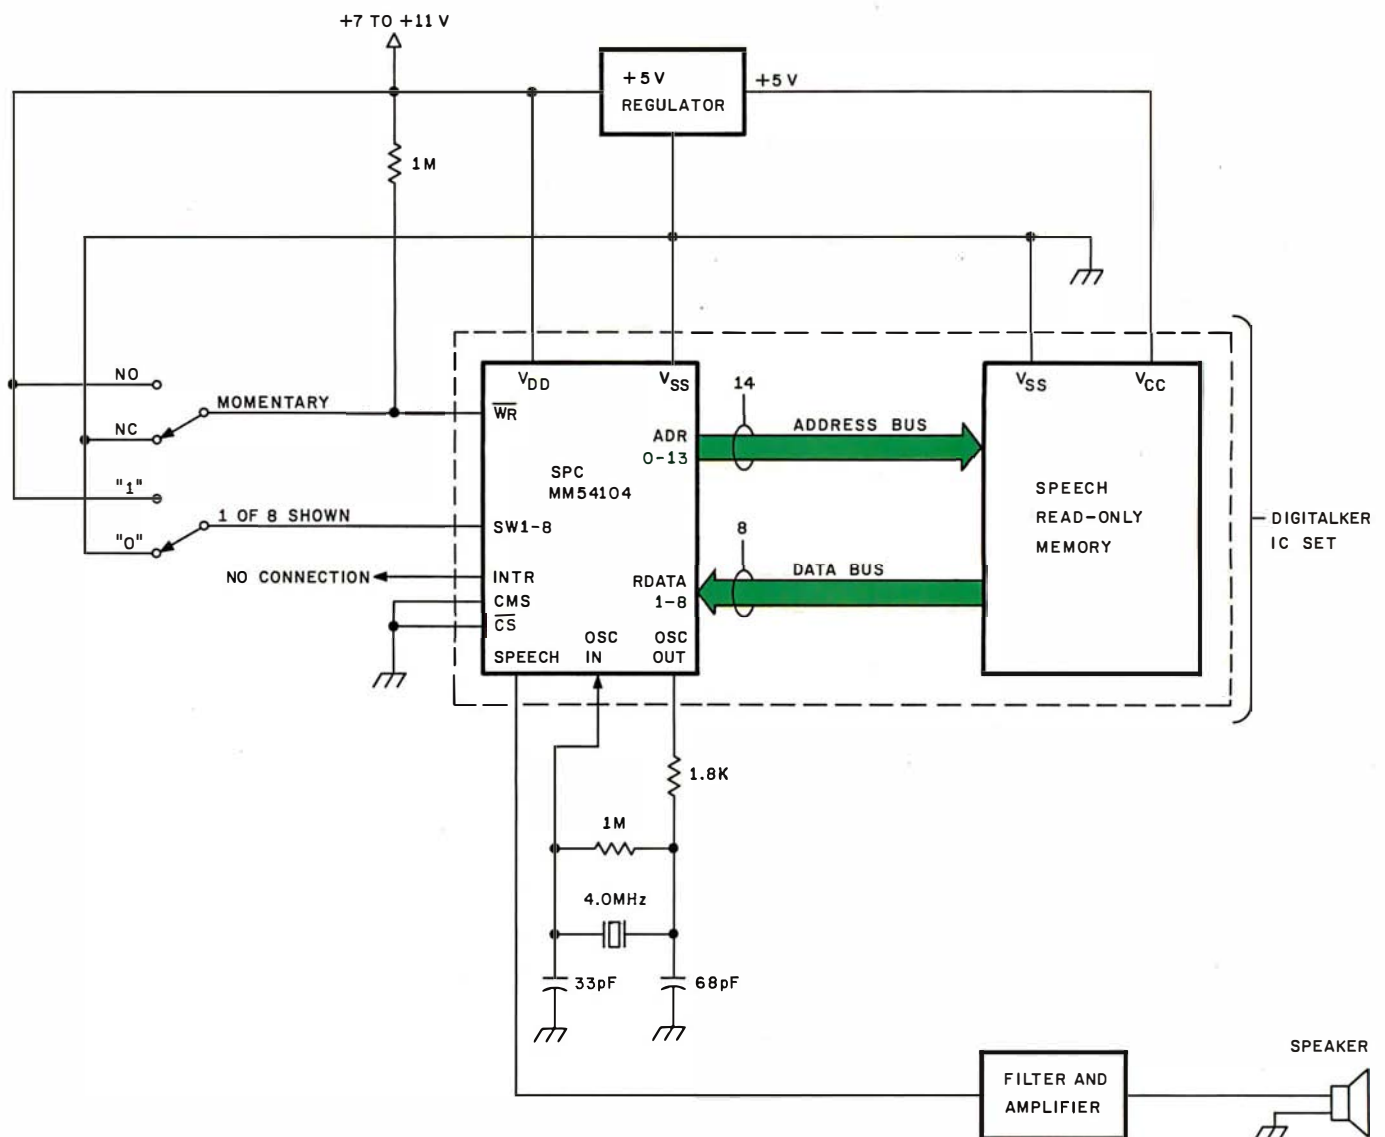

Figure 2: Simplified schematic diagram of a minimum-configuration speech demonstration system, in which mechanical switches are used to set up the desired word. The momentary switch is a single-pole, two-position type. The crystal is a 4.0 MHz Electro Dynamics Corporation HC18 20 pF unit.

STOP STEALING FROM YOUR OWN BUSINESS

Here's the white collar crime of 1981: Let your people labor away for hours at jobs a properly trained computer can do in seconds.

You **pay** for all those wasted hours.

And you're **missing opportunities**, because the hours could be spent on new, productive, profitable projects.

We can help you.

If you have a CP/M®-based microcomputer, SSG's Business Productivity Packages will scoop up all those hours you're losing and give you back more productivity, more time, more information, and more success.

ANALYST. \$250. An information storage and retrieval (data base) system that will replace piles of files with information you can **USE**.

MAGIC WORKSHEET. \$250. SSG's answer to the world's demand for electronic spreadsheet calculation and "what-if" capabilities on CP/M systems. (Available quarter two 1981.)

NAD Name and Address. \$100. A mailing

and addressing system to do all the typing and clerical work on lists—from ten names to ten thousand.

LETTERRIGHT. \$200. A correspondence processing package that speeds letter writing **AND** merges your letters with names selected from your NAD list.

It takes very few hours at today's salary levels to repay the cost of any of these systems. They'll do you far better than that. SSG's Productivity Software Packages will contribute immediately to the growth and success of your business.

Please act now. Tear out this page. This coupon or a phone call will get you immediate relief from the white collar crime of 1981. We'll send you complete information. Or better still, answer your questions **immediately**.

Time's a-wasting.
That's a crime.

☐ Please rush me information on the SSG Business Productivity Packages for CP/M-based computers.

☐ Please call me right away.

Structured Systems Group

INCORPORATED

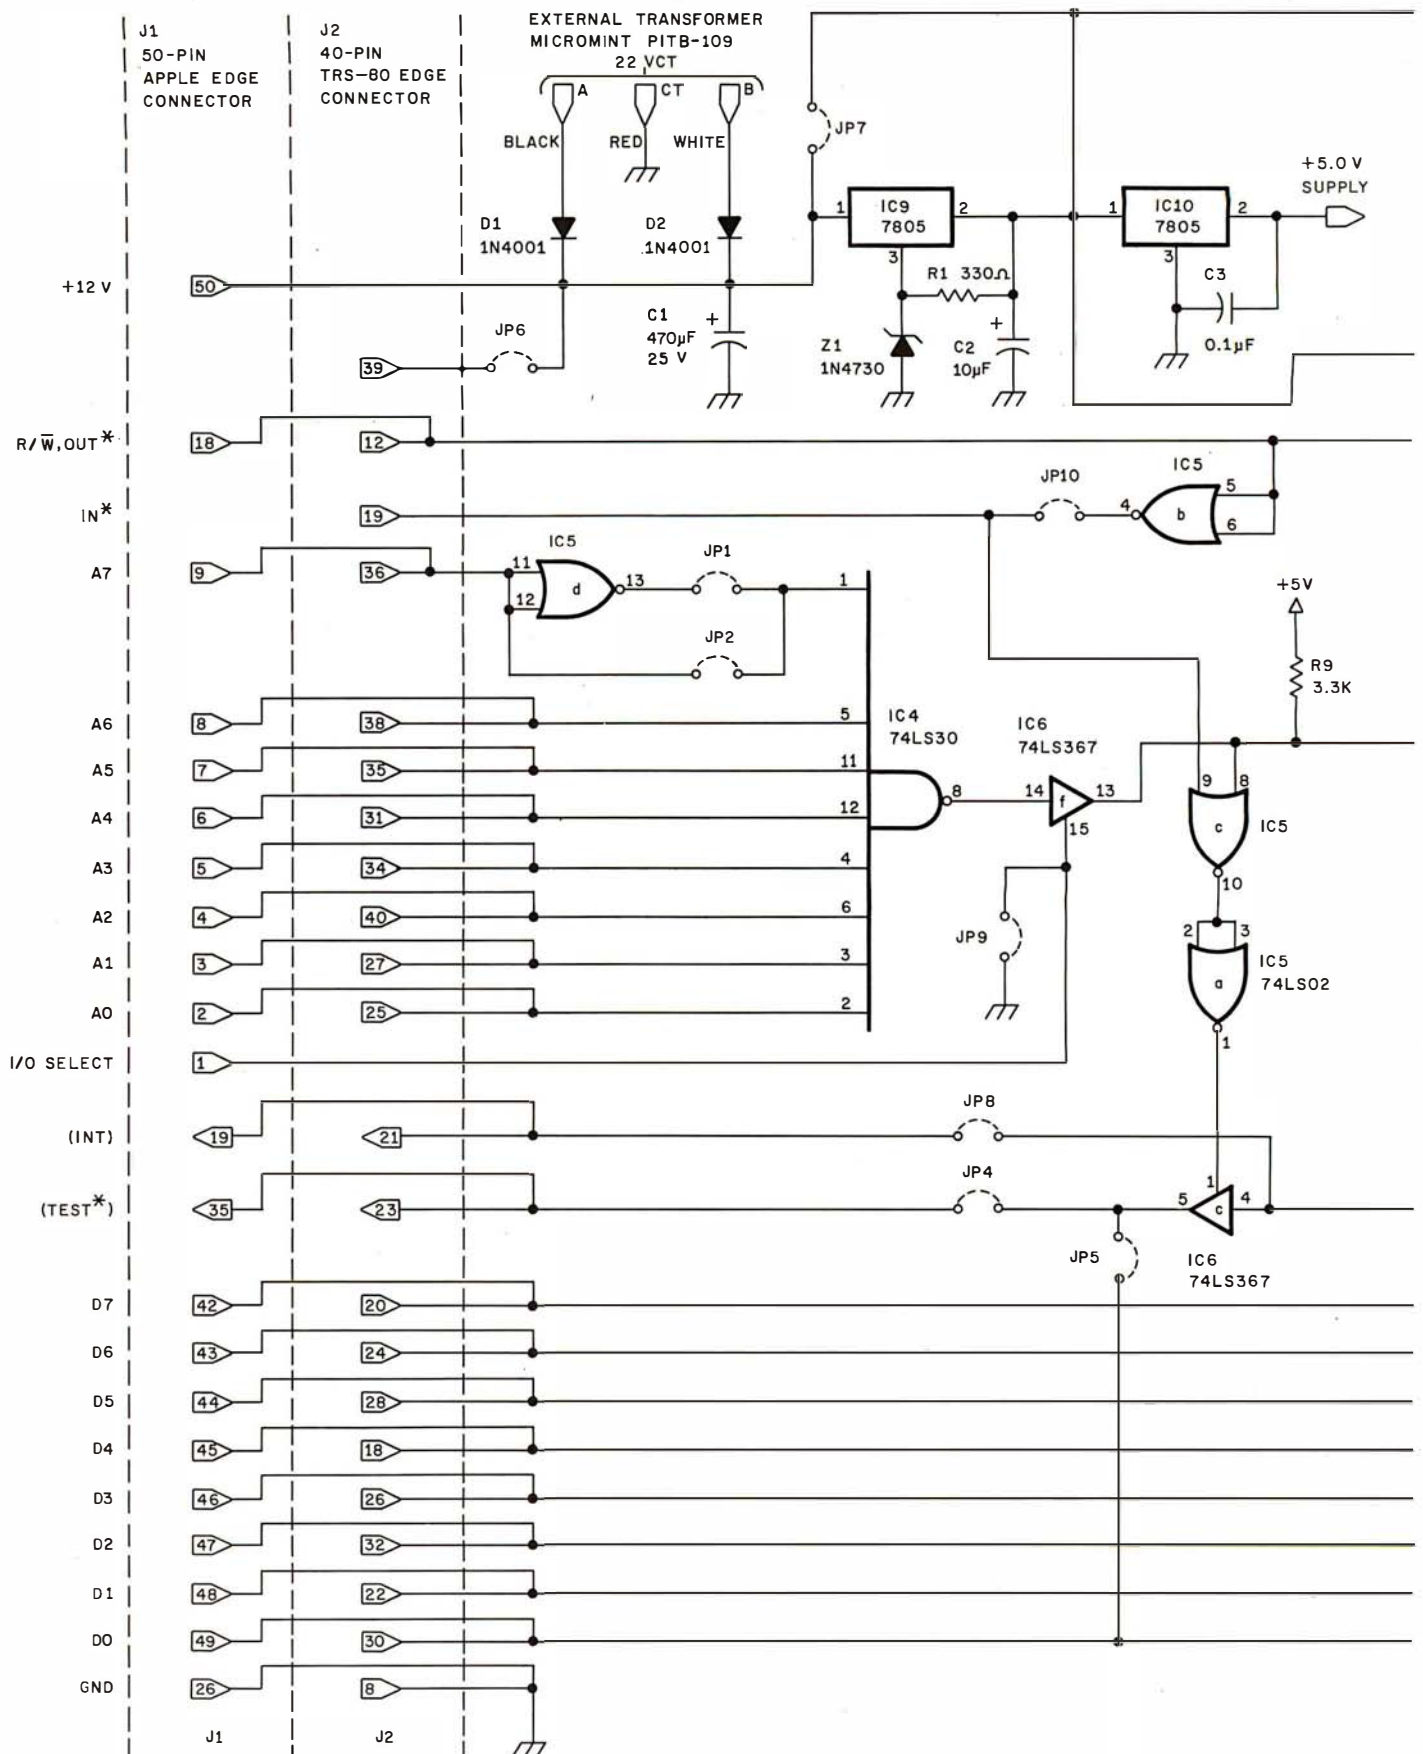

Figure 3: Schematic diagram of the Micromouth speech-processor board. The board is plug-compatible with the Apple II and TRS-80 Model I computers and can be plugged into the TRS-80 Model III with a simple adapter. Several features and options in the circuit are activated by selection of jumper connections; see table 3, on page 58, for a list of jumpers and their purposes. Interface signals are compatible with other microcomputers, including Digital Group, Heath H-8, and S-100-bus systems.

Text continued from page 54:

times it is repeated. Speech data from the ROM is loaded into the speech processor's data register and passed on to the delta-modulator decoder. This produces a 4-bit number that is applied to the D/A converter. Successive and regressive (remember the mirror waveform) digitizations produce a final waveform that is output in real time. Figure 1b shows the pinout specifications of the speech processor and the associated ROMs.

Adding a Digitalker Interface

In general, causing any of the 144

stored expressions to be uttered is done by loading a numeric word code into a register in the speech processor. The code, selected from the list in table 1, is latched when the write-enable and chip-select lines are strobed. The speech processor immediately utters the selected expression.

If the input code is 0, the message "This is Digitalker" is spoken, in about 1.3 seconds. To say a word like "at" takes much less time. If another word-selection address is strobed into the speech processor while it is speaking, it will terminate the current out-

put and begin speaking the newly selected expression. To keep the unit from jamming one word on top of another, a handshaking signal (INTR) goes to a low logic condition when the device is talking.

The simplest Digitalker system can consist of as little as the three speech-system integrated circuits, a 4 MHz oscillator, and an amplifier/filter (as shown in figure 2). Different expressions can be accessed by attaching eight switches to the SW1 thru SW8 input lines and a pushbutton switch to momentarily pulse the write-enable line.

Full use of the Digitalker's capabilities, however, can only be achieved when it is connected to a computer and exercised under program control. Figure 3, on pages 56 and 57, is the schematic diagram of the Micromouth speech-synthesizer interface, which incorporates the Digitalker chips. It is designed to be bus-signal-compatible with a number of computers, and it can be operated through a parallel I/O port. Assembled on the printed-circuit board shown in photo 1, it is plug-compatible with the Apple II and TRS-80 Model I personal computers. The pin numbers listed in the figure for connector J2 correspond to the TRS-80 Model I TRS-BUS edge connector, and pin numbers listed for J1 correspond to the Apple II's I/O card slots. A source for the Micromouth speech-processor assembled unit, blank boards, and components is given in the text box on page 68.

Micromouth Versatility

The Micromouth board is designed to accommodate bidirectional as well as unidirectional data buses. The data-bus lines are normally attached to pins 8 thru 15 of IC1, the speech-processor component. The bus line from the speech processor, INTR, is jumpered (by either jumper connection JP4 or JP5) to meet the requirements of the particular bus being used. For both the TRS-80 and Apple II, which have bidirectional data buses, jumper JP5 is inserted to connect the INTR output to the D0 bus

Text continued on page 62

Peripheral Slot	Address Jumpers			
	JP1		JP2	
	Hexadecimal	Decimal	Hexadecimal	Decimal
1	C17F	- 16001	C1FF	- 15873
2	C27F	- 15745	C2FF	- 15617
3	C37F	- 15489	C3FF	- 15361
4	C47F	- 15233	C4FF	- 15105
5	C57F	- 14977	C5FF	- 14849
6	C67F	- 14721	C6FF	- 14593
7	C77F	- 14465	C7FF	- 14337

Table 2: I/O addresses used by the Apple II in communicating with the Micromouth speech-processor board. These are addresses in the Apple's peripheral-card ROM address space. The driving software can manipulate these registers using memory-reference instructions; in BASIC, PEEK and POKE are used.

Jumper Connection	Purpose
JP1	When connected, sets TRS-80 I/O-port address to decimal 127; mutually exclusive with JP2; see table 2 for Apple II addressing.
JP2	Sets TRS-80 I/O-port address to decimal 255; see table 2 for Apple II addressing.
JP3	To be connected if transistor Q1 is to be omitted and an adequate external power supply is to be used.
JP4	Not for use with either TRS-80 or Apple II computers; provides INTR feedback to computer, gated by the address strobe; see also JP8.
JP5	When connected, enables use of a bidirectional data bus; otherwise a unidirectional bus is assumed.
JP6	Not for use with either TRS-80 or Apple II; when the 40-pin edge connector is used, a +12 V supply may be provided to the board through pin 39.
JP7	May be connected if an external +9 V or +8 V supply is available.
JP8	Not for use with either TRS-80 or Apple II; provides INTR feedback to computer, although not gated as through JP4.
JP9	Must be connected when board is used with a TRS-80; enables I/O commands to be decoded properly.
JP10	Must be connected when board is used with an Apple II; provides proper I/O-command decoding.

Table 3: List of jumper connections in the schematic diagram of figure 3. Various features and options of the Micromouth speech-processor board are activated by connecting different jumpers. Some options are not needed when the board is used with an Apple II or a TRS-80. Experimenters with other computers may use the 40-pin and 50-pin edge connectors in nonstandard ways; therefore some connections have been provided that have no obvious use.

BUMPER CROP

8-inch Winchester Multi-User Systems. Now In Volume- \$8,500.

Altos is delivering the cream of the crop with their new 8-inch multi-user Winchester disk systems. They're freshly packed with the quality features you expect from Altos, and at a price you expect from Altos, too—just \$8,500.

Pick from two fully integrated systems, each packaged in our new compact, stylish cabinet suitable for either rack mount or table top applications. You get 10 MBytes of reliable on-line storage in our 8-inch Winchester drives. Then for system back-up storage, you can select from

either 8-inch, single or double-sided floppy drives (ACS8000-10 and -10D) or a 1/4-inch magnetic tape drive (ACS8000-10/MTU). And for powerful performance, all of these Z80A*based systems come complete with 208K of RAM and 6 programmable serial ports, ready to support four users.

Here's the most bountiful selection of systems and capacities in the field from the company that knows how to deliver quality systems in the volumes that OEMs need to stay competitive.

And Altos supports these systems with a broad software selection including the three industry standard operating systems—CP/M, multi-user MP/M** and OASIS†. These operating systems support seven high level programming languages: BASIC, FORTRAN, COBOL, PASCAL, APL, PL/1 and C. Also available are comprehensive communications packages: ASYNC—Altos-to-Altos, BISYNC—Altos-to-mainframe and full networking with CP/NET. All are designed to run on a high speed 800 Kilobaud networking channel—standard with every system.

The ACS8000-10 Winchester systems join our growing family of field-proven products. In just three years, more than 8,000 systems have been shipped to an OEM customer-base.

Get to market fast. Harvest your 8-inch Winchester system direct from the heart of Silicon Valley. Call or write today for specific product information and OEM pricing. Altos Computer Systems. 2360 Bering Drive, San Jose, CA 95131, (408) 946-6700, Telex 171562 ALTOS SNJ.

line. The controlling computer can read the status of this line with an input instruction; only the least-significant bit will be affected. For a unidirectional data bus, as in a Digital Group computer, JP4 would be inserted and pin 5 of IC6 connected to the least-significant bit of the input bus.

The logic gates of IC4, IC5, and IC6 perform address decoding and chip selection. The I/O-port address of the board is set by inserting jumper JP1 or JP2. With JP1 installed, the address is port hexadecimal 7F (decimal 127). With JP2 installed, it is port hexadecimal FF (decimal 255). On the Apple II, the port address depends upon the slot in which the board is inserted. Table 2 is an address map for the Micromouth speech-processor board installed in an Apple II.

The speech-processor chip requires +7 to +11 V for normal operation, while the ROMs and other integrated circuits require only a +5 V supply. To accommodate the different ranges, I used two separate voltage

regulators. IC9, a 7805 regulator, can safely be fed an input-voltage range of +9 to +24 V. When installed in an Apple II it receives a +12 V supply from the I/O bus. When the board is used with the TRS-80, a separate full-wave power supply using a 22 V center-tapped power transformer supplies approximately +15 V RMS. IC9 and associated components regulate the output to the speech processor to about +9 V. IC10, another 7805, in turn, reduces the +9 V to the +5 V required by the rest of the components.

The typical maximum current requirement of the Micromouth speech-processor circuitry is about 250 mA. Most of this is consumed running the two 64 K-bit ROMs, which are used only a few microseconds at a time. A memory-enable signal, ROMEN, can be used with a transistor (Q1) to gate the power on and off to the ROMs. The average current required ends up being about 80 mA.

The final section for consideration is the filter and amplifier, IC7 and

IC8. As in any digitized analog-signal output, a low-pass filter is required. For low-pitched male voices, the cutoff frequency should be about 100 Hz; for high-pitched female or children's voices it should be 300 Hz. The filter in figure 3 has a cutoff frequency around 150 Hz. That limit wasn't set mathematically; I simply chose a pleasant-sounding range. The frequency response of the output speaker and its enclosure can also affect sound quality. In my opinion, the sound output by this circuit is quite human-like. Any additional filtering usually serves only to eliminate background noise.

Using a Parallel Port

The Micromouth board can also be jumpered so that it can be driven by a parallel I/O port. This is accomplished by inserting jumpers JP8 and JP9. With the input lines to IC5 and IC6 left open, a constant chip-select signal will be generated. The 8-bit parallel output from the computer is attached to pins 8 thru 15 on the speech processor. The same signal that latches the bit values into the output port can be used as the WR strobe on IC1 pin 4. The speech-processor-busy status indication is handled by directly reading the INTR line via an input-port line.

Basic Software Simplicity

The best thing about a fixed vocabulary "canned-speech" synthesizer is the low software overhead. Text-to-speech synthesizers, on the other hand, usually require at least an 8 K-byte driver program, which must be integrated into the existing operating system. With the Micromouth speech-processor board, any or all of the 144 expressions can be spoken using a simple BASIC OUT or POKE statement.

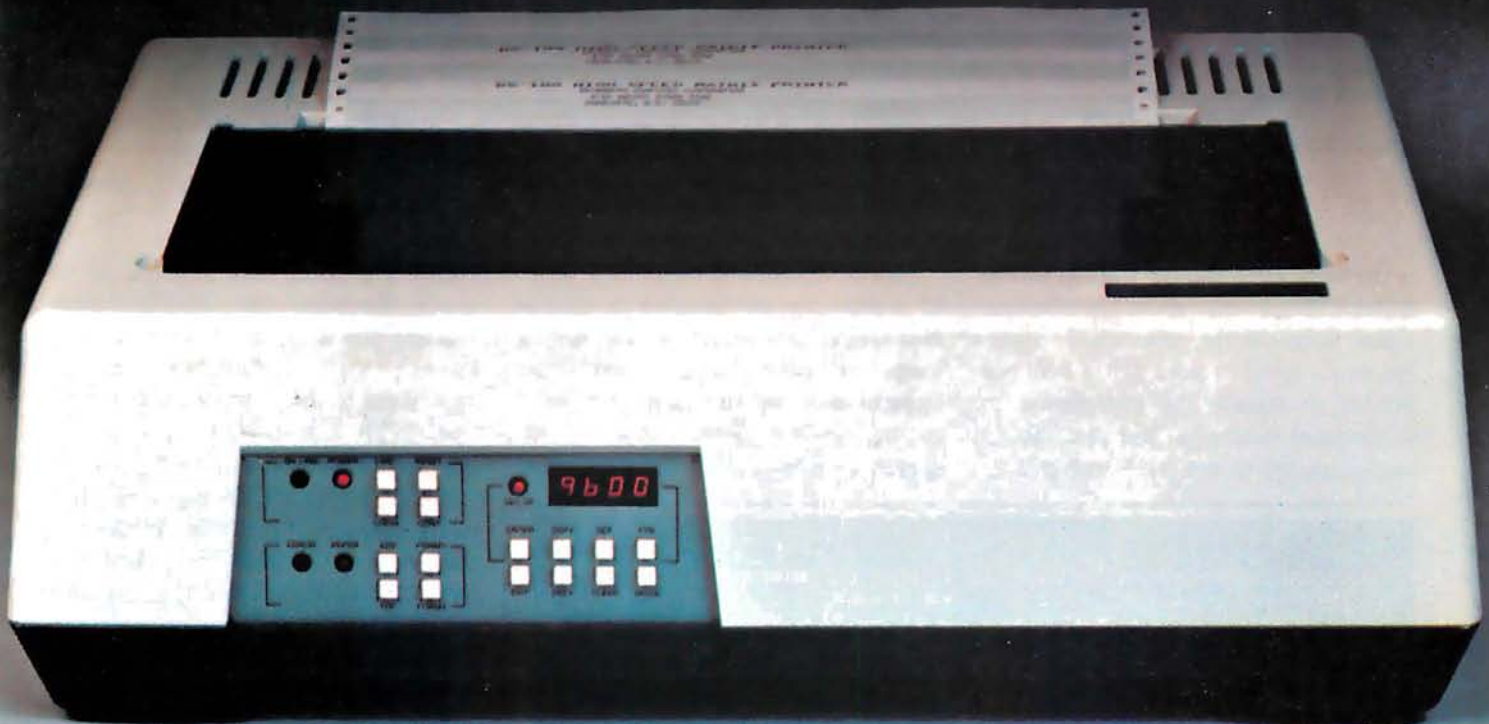

For example, to say "twenty" using the board connected to a TRS-80 system, you would execute an OUT 127,20 statement in BASIC. With the Apple II, the appropriate statement would be POKE -16001,20 if the board were installed in slot 1. As you can see, the control information communicated to the board, a decimal 20,

The secret may be our exclusive Agent Code of Standards. Our air-ride van fleet. International agent network. Computerized scheduling. Or our ability to move whatever or whomever you want. Reliably. Whatever the secret, it's made us America's most experienced movers. Call your local agent.

ICC MC-6992

datasouth announces... **THE TOTAL PRINTER PACKAGE!**

With so many matrix printers on the market today, it may seem tough to find exactly the right one for your application. Some models may offer the speed you need, others the communications flexibility and still others the forms handling capability. But no printer offers **all** the features you need...until now.

The DS180 matrix printer provides the total package of performance features and reliability required for applications such as CRT slave copy, remote terminal networks and small to mid-range systems. Not a "hobby-grade" printer, the DS180 is a real work-horse designed to handle your most demanding printer requirements. And pricing on the DS180 is hundreds of dollars below competitive units.

High Speed Printing—Bidirectional, logic-seeking printing at 180 cps offers throughput of over 200 lpm on average text. A 9-wire printhead life-tested at 650 million characters generates a 9x7 matrix with true lower case descenders and underlining.

Non-volatile Format Retention—a unique programming keypad featuring a non-volatile memory allows the user to configure the DS180 for virtually any application. Top of form, horizontal and vertical tabs, perforation skipover, communications parameters

and many other features may be programmed and stored from the keypad. When your system is powered down, the format is retained in memory. The DS180 even remembers the line where you stopped printing. There is no need to reset the top of form, margins, baud rate, etc....it's all stored in the memory. If you need to reconfigure for another application, simply load a new format into the memory.

Communications Versatility—The DS180 offers three interfaces including RS232, current loop and 8-bit parallel. Baud rates from 110-9600 may be selected. A 1K buffer and X-on, X-off handshaking ensure optimum throughput.

Forms Handling Flexibility—Adjustable tractors accommodate forms from 3"-15". The adjustable head can print 6-part forms crisply and clearly making the DS180 ideal for printing multipart invoices and shipping documents. Forms can be fed from the front or the bottom.

If you would like more information on how the DS180's low-cost total printer package can fill your application, give us a call at Datasouth. The DS180 is available for 30-day delivery from our sales/service distributors throughout the U.S.

computer corporation

Listing 1: A BASIC program for the Radio Shack TRS-80 Model I that will cause the Micromouth speech-processor board to say "At the mark the time is 2:45 pm....beep." A program for the Apple II would use the POKE keyword to achieve the same effect as the OUT statement.

```

100 DIM N(15)
110 DATA 61,138,105,71,138,139,
    96,2,4,5,47,44,71,71,65
120 FOR X=1 TO 15 :READ N(X)
    : NEXT X

150 FOR X=1 TO 15 : OUT 127,N(X)
    : GOSUB 1000 : NEXT X
160 GOTO 1999

1000 IF INP(127)=1 THEN
    GOTO 1000 ELSE RETURN
1999 END

```

is the same even though the keywords differ. (Since my program illustrations consistently use OUT statements directed to port 127, I will not bother to restate the conversion in subsequent examples, but you should recognize the direct relationship.)

Listing 2: A BASIC program that will cause the Micromouth speech-processor board to recite multiplication results for any number between 1 and 10.

```

100 PRINT "MULTIPLICATION TABLE EXERCISER"
110 OUT 127,0:REM Say This is Digi-Talker
120 PRINT:PRINT"Which table do you want to review (1 to 10)";
130 INPUT N
140 FOR X=0 TO 10
150 PRINT X;"X";N;"=";X*N:J=X*N
160 IF X=0 THEN OUT 127,31:GOSUB 290:GOTO 180
170 OUT 127,X:GOSUB 290

320 REM say TIMES

```

READY

Having the board speak in a series of words can be handled in one of two ways. One way is to use timing loops or other program-execution steps to allow enough time for a word to be spoken before loading the speech processor with the next word

code. The preferred method is to check the busy line (INTR) before loading the next word. In this way, speech can sound continuous regardless of the length of each word. The INTR status bit is read as the least-significant bit of port 127 by the function INP(127). In my examples, while the speech processor is talking, the decimal value returned by INP(127) equals 1; while it is not talking, INP(127) equals 0.

Therefore, saying the number twenty-one, which consists of saying "twenty" and "one" successively, goes as follows:

```

100 OUT 127,20 : GOSUB 1000
    : OUT 127,1
110 STOP
1000 IF INP(127)=1 THEN
    GOTO 1000 ELSE RETURN
1999 END

```

A similar program can be used to demonstrate the entire Digtalker vocabulary:

```

100 FOR N=0 TO 143 : OUT
    127,N : GOSUB 1000
    : NEXT N
110 STOP
1000 IF INP(127)=1 THEN
    GOTO 1000 ELSE RETURN
1999 END

```

Longer utterances are typically

SUPERBRAIN QD™

VS.

SUPERBRAIN™

the two top microcomputer contenders

When you decide to buy a microcomputer system, it usually gets down to one model versus another. Will it be the SuperBrain from Intertec... or one of those other models from Intertec's competitors? Well, there's really not much of a choice in the price/performance competition. The SuperBrain wins hands down! And it's a pretty tough contender if reliability, factory support and nationwide service are important to you. So what do you do? Choose our SuperBrain just because you know it's best? Or keep waiting for someone to announce something better?

WAIT NO LONGER...

It wasn't enough that our SuperBrain had such standard features as twin double-density disk drives with nearly 350,000 bytes of disk storage. A full 64K of dynamic RAM. A CP/M* Disk Operating System which assures compatibility to literally hundreds of application packages. A crisp, 12" non-glare screen with a full 24 line by 80 column display. A full-featured ASCII keyboard with a separate keypad and individual cursor control keys. Twin RS232 serial ports for fast and easy connection to a modem or a printer. Plus, dual Z80 processors which operate at 4 megahertz to insure lightning-fast program execution. No, it wasn't enough. So we changed it. We made it even better!

ANNOUNCING SUPERBRAIN QD...

Our new QD model boasts all the features of our phenomenally popular SuperBrain with the addition of double-sided disk drives. So, for only a modest increase in price, you can order your next SuperBrain with more than twice the disk storage. But, best of all, you can field upgrade the disk capacity of either model to a whopping 10 megabytes! Now how's that for a choice?

HOW DID WE DO IT?

The secret of SuperBrain QD's incredible disk storage lies within our new double-density, double-sided disk drives. Nearly 750,000 bytes of data can be formatted on two specially designed 5¼" drives. More than enough to tackle almost any serious small business application. Plus, SuperBrain QD's 64K of dynamic RAM will handle even your most complicated programming tasks.

Of course, if you really need megabytes instead of kilobytes, just add our 10 megabyte CompuStar™ Disk Storage System. It connects in seconds and gives you the capability to expand your system into a powerful multi-user network with up to 255 CompuStar terminals. You can add users one at a time as you need them. So no matter how much your needs expand, your original investment in computer hardware is always protected.

BUT IS IT RELIABLE?

Our best salesmen are our present customers. Not only have SuperBrain and QD users been impressed with the inherent reliability of the systems, they tell us that no other microcomputers available offer such a unique modular design concept. Just about the only service tool required is a common screwdriver. But of course if you'd rather let us do the service, our total commitment to product and customer support, with service outlets in most major cities, will guarantee your satisfaction for many years to come.

The CompuStar™ Disk Storage System
... Connects in seconds to either model.

THE DECISION IS YOURS...

Whether your next microcomputer is the SuperBrain or our QD model, you'll be purchasing what is becoming one of the world's most popular microcomputer systems. And regardless of which model you choose, you'll probably never outgrow it because you can keep expanding it.

Call or write us today for more information on our full line of microcomputer systems. Ask for our "SuperBrain Buyer's Guide" and read why so many customers like yourself have made the SuperBrain and the SuperBrain QD their top two choices for performance, value and reliability.

```

handled by storing all the word codes in an array. Such a technique can be used to say, "At the mark the time is 2:45 pm....beep," using the BASIC statements in listing 1.

I have included a few program examples to demonstrate how the speech-processor board can be used. Listing 2 is a simple program for saying multiplication tables. This program asks the operator to choose a multiplication table for a number between 1 and 10. If 8 were chosen, for example, the program would say:

"Zero times eight equals zero."
 "One times eight equals eight."
 "Two times eight equals sixteen."

and so on to:

"Ten times eight equals eighty."

This is just a rudimentary example. The program could be modified easily to posit questions such as "Six times nine equals..." and wait for a typed response. Appropriate answers would be "Error...Please try again," or "Right."

Listing 3, on page 66, is a menu-driven program that further exercises the interface and demonstrates a few more applications. Speech example A says, "beep... beep... beep... beep... The time is...twelve hours...seven-teen minutes...beep." It is very much

Listing 4: The printed output of the program in listing 3. Due to the limitations of magazine printing, we cannot reproduce the audible output produced by the program.

```

run
DIGI-TALKER TEST PROGRAM

1. Say entire vocabulary

3. Tones
4. Speech example A
5. Speech example B
6. Say 'THIS IS DIGI-TALKER'

```

Enter choice (1-5) ?

like the time message heard over shortwave radio station CHU Canada.

Speech example B from listing 3 illustrates how process-control applications might be handled. It says, "Control error...Mark seven twenty pm...Flow rate is thirty gallons a minute...Lower speed to twelve hundred rpm and set flow rate to one hundred gallons a minute."

In Conclusion

Applications that would be enhanced by speech output are limitless. I have demonstrated just a few examples dealing with process control and time.

Many handicapped persons could benefit from speech output. It would be possible, for example, to attach a speech-output device to the user-terminal keyboard of a personal computer. As the keys are pressed, the corresponding letters are spoken aloud. (A simple ROM containing Digitalker equivalents for ASCII [American Standard Code for Information Interchange] characters could be used to interface the speech-processor board.) A similar connection can be made to the printer output (using the INTR-signal handshaking to slow it down) to allow the operator to hear what would otherwise be printed.

I did not attempt to modify any computer games as illustrations. Computer games could easily be made to talk using a few extra BASIC

The best news since CP M... customizable full screen editing

As a serious computer user you spend much of your time editing, whether it be for program development or word processing. Make the best use of your time with the help of VEDIT, an exceptionally fast and easy to use full screen editor. VEDIT is a highly refined and proven editor which is easy enough for novices to learn and use. Yet its unequalled set of features also makes it the choice of computer professionals. And because VEDIT is user customizable, it adapts to your keyboard, hardware, applications and preferences.

In VEDIT, the screen continuously displays the region of the file being edited, a status line and cursor. Changes are made by first moving the cursor to the text you wish to change. You can then overtype, insert any amount of new text or hit a function key. These changes are immediately reflected on the screen and become the changes to the file.

VEDIT has the features you need, including searching, file handling, text move and macros, plus it has many special features. Like an 'UNDO' key which undoes the changes you mistakenly made to a screen line. The Indent and Undent Keys allow automatic indenting for use with structured programming languages such as Pascal and PL/I. The disk write error recovery lets you delete files or even insert another disk should you run out of disk space during an edit session. And you have the ability to insert a specified line range of another file anywhere in the text. Disk access is very fast and VEDIT uses less than 12K of memory. The extensive 70 page, clearly written manual has sections for both the beginning and experienced user.

Totally User Customizable

Included is a setup program which allows you to easily customize many parameters in VEDIT, including the keyboard

layout for all cursor and function keys, screen size, default tab positions, scrolling methods and much more. This setup program requires no programming knowledge or 'patches', but simply prompts you to press a key or enter a parameter.

The CRT version supports all terminals by allowing you to select during setup which terminal VEDIT will run on. Features such as line insert and delete, reverse scroll, status line and reverse video are used on 'smart' terminals. The memory mapped version supports bank select and a hardware cursor such as on the SSM VB3. Special function keys on terminals such as the H19, Televideo 920C and IBM 3101, and keyboards producing 8 bit codes or escape sequences are also supported.

Ordering

Specify the CRT version, your video board or microcomputer, the 8080/Z80 or Z80 code version, and disk format required. (Call for pricing and delivery on the CP/M-86 version)

Standard Package: Disk and manual \$130
Manual: Price refunded with software purchase \$15

VISA and MASTER CARD Welcomed.
Attractive Dealer Terms.

New CRT Emulation Package

Get the details on our CRT emulation package for S-100 computers, which features the PLICEON V-100, 24x80 video board and our software to give you an exceptionally compatible and high speed alternative to a CRT terminal.

statements that are independent of the program flow.

What I'd like to leave you with is an appreciation for the price/performance advantages and ease of use inherent in this speech interface. Soon other Digitalker ROMs will be available, containing specialized vocabularies for medical, aeronautical, or even space-war applications. These other ROMs will be available eventually thru the MicroMint.

[Editor's Note: National Semiconductor Corporation is providing a brief telephone demonstration of the Digitalker speech-synthesis system at (408) 737-3939....RSS]

The invention of Digitalker does not mean the demise of other approaches to computer-generated

speech. Instead, it introduces low-cost speech output into areas that could never have justified the expense previously. Eventually, hand-held talking digital volt-ohmmeters will be mass-produced, and I don't think it will be too far into the future. But that is merely one application. You can expect to see (or rather hear) speech emanating from many commercial products.

Those who work with other speech-synthesis techniques have not been standing still during the development of "canned-speech" chips. Phoneme synthesizers, such as the Votrax SC-01, now accomplish on a single chip what once required a whole circuit board. My investigation of speech synthesis doesn't stop here. In the months ahead I hope to

demonstrate other computer-speech techniques, interfaces, and applications.

Next Month:

Would you think that a computer system capable of running a BASIC interpreter could fit on a 4-inch-square circuit board? Find out how to build one in next month's Circuit Cellar. ■

Item	Price	
Apple II Micromouth speech-processor board	Kit	\$120
	Assembled and Tested	\$150
TRS-80 Model I Micromouth speech-processor module (includes circuit board, power supply, 40-conductor cable, and enclosure; deduct \$10 if you don't want the enclosure)	Kit	\$150
	Assembled and Tested	\$175
TRS-80 Model III Micromouth speech-processor module (includes board, power supply, adapter cable, and enclosure)	Kit	none
	Assembled and Tested	\$200
Blank printed-circuit board for Micromouth speech-processor board (without components)		\$29

The Apple II version of the Micromouth speech-processor board is suitable for use with parallel-I/O-port and other non-plug-compatible computer connections. The assembly/operation instructions include directions for attaching the board to S-100 bus, Digital Group, and Heath H-8 computers.

All printed-circuit boards are solder-masked and silk-screened. They come with assembly instructions and program examples.

The Digitalker integrated circuits are not sold separately by The MicroMint. They can be obtained through National Semiconductor distributors for \$85 per set plus shipping charges.

New York residents please add 7% sales tax.

Editor's Note: Steve often refers to previous Circuit Cellar articles as reference material for the articles he presents each month. These articles are available in reprint books from BYTE Books, 70 Main St, Peterborough NH 03458. Ciarcia's Circuit Cellar covers articles that appeared in BYTE from September 1977 thru November 1978. Ciarcia's Circuit Cellar, Volume II presents articles from December 1978 thru June 1980.

If you write software, write Digital Research.

We can help you bring your products to market.

Independent Software Vendors (ISV's) are the key to solving the software crunch in the 1980's. To help you bring your products to market, Digital Research introduces the ISV Support Plan — designed to assist you in:

- Developing Your Product
 - ☐ With the fast and powerful PL/I-80™ Programming System
 - ☐ ISV Seminars covering high level applications programming

Getting Established in Your Market

ISV Seminars cover:

- ☐ Designing a marketing strategy
- ☐ Advertising
- ☐ Writing Manuals
- ☐ Assuring software security
- ☐ Supporting and updating products

On-Going Support Includes:

- ☐ Legal and technical information
- ☐ Distribution channels
- ☐ Printing facilities
- ☐ Free product listing in our Applications Software Catalog

All this plus the world's largest software marketplace — the CP/M® customer base.

So why do it alone? Write Digital Research. We'll send you our free brochure detailing the ISV Support Plan.

Space Shuttle Columbia is a symbol of the commitment to explore the limits of science and technology.

The Denver Software Company has made a similar commitment: to simplify these breakthroughs for everyday use.

By developing applications software in UCSD Pascal*, the newest microcomputer language, and by using a unique approach to design, The Denver Software Company creates high quality programs for use in business, industry, and the home.

The speed and flexibility of UCSD Pascal enable DSC to manufacture versatile programs, usable on more microcomputers, while at the same time reducing costs to the consumer. In addition, DSC has combined the strength of this language with a new, low-cost portable computer, the Attache from Otrona, to provide the user with even more efficient computer capability.

Pascal-related products now available from The Denver Software Company include:

The PASCAL TUTOR™: Teaches persons at the entry level how to write simple programs. Using the computer as instructor, this self-paced program is the first in a series of Pascal teaching tools. Price: \$125

The PASCAL PROGRAMMER™: A programming aid for those familiar with UCSD Pascal. Provides pre-tested modules which reduce programming efforts by approximately 70%. Includes two diskettes with source code and library units, user's manual, complete module documentation, and ideas for modifications. Price: \$125

The FINANCIAL PARTNER™: A one- or two-drive accounting system designed specifically for households or for small businesses with an annual gross of up to \$1,000,000. All necessary "how-to" is contained in a comprehensive user's manual. Price: \$175

PERT/Critical Path Management: Time analysis program which allows critical path supervision. For use in project management, this time-saving system considers manpower and skill levels, and provides for fulltime, fulltime plus overtime, and parttime employment of personnel. Price: \$750

Mathematical Modeling:

A BASIC Program to Simulate Real-World Systems

Randall E Hicks
University of Georgia
Marine Institute
Sapelo Island GA 31327

Editor's Note: The subject of this article, simulating systems by solving a system of differential equations, is difficult, but we feel it is useful to many BYTE readers. In fact, only a rudimentary understanding of the principles involved is needed to use the general-purpose BASIC program of listing 2. The involved mathematics at the end of the article presents the theory on which the program is based. . . . GW

Many academic disciplines have used computers for modeling biological, physical, economic, and social systems. Modeling complicated systems once was time-consuming, expensive, and cumbersome. Yet, as computer-related technology advanced, the magnitude of these problems has dwindled, and the potential for less-expensive modeling and simulation tasks in all disciplines has increased.

My purpose is to demonstrate how useful microcomputers can be in mathematical simulations. I will introduce you to modeling the behavior of a system by describing it mathematically with a system of time-invariant linear differential equations. I will show how to solve systems of differential equations by two separate numerical methods. As a framework for the simulation tasks, I will use a simple model as an example for you to follow: a hydrologic model of the forested uplands surrounding Okefenokee swamp in Georgia. (See reference 3.)

The Conceptual Model

To simulate a system, you must be able to conceptualize it into some logical framework. A flow diagram consisting of compartments and connecting flows satisfies this requirement. (See figure 1.) Each compartment in

About the Author

Randall E Hicks is a graduate student at the University of Georgia working toward his PhD in Ecology at the Institute of Ecology. He is employed by Ecology Simulations Inc, Athens, Georgia, as a marine systems modeling consultant.

Photo 1: Zero-input response of the Okefenokee swamp hydrologic model simulated with the program in listing 2.

the diagram represents a place for the potential accumulation of energy, matter, or information. A *system* is defined as the collection of compartments that have been outlined and the potential interactions among them. The flows between compartments describe how the system interacts with itself through transfers of the compartmental contents.

The boundaries of the system must also be defined. The *environment* of the system is the area outside the system's periphery. If the system does not interact with its environment, it is called a *closed system*, and the model will not receive inputs from or yield losses to its surroundings. In other words, the system is self-contained. In the Okefenokee swamp uplands hydrologic model, the system is said to be *open* because it interacts with its environment. In the conceptual model (figure 1), this is visualized by an input from the environment to the system and by an output from the system to the environment.

The input to the system (Z) is the sum of the flows to each compartment (f_{i0}) from all environmental inputs. The environment surrounding the system is represented by the numeral 0. In the hydrologic model, there is only

Corvus Lowers the Price of Admission to the Winchester Club.

Here's the price breakthrough you've been waiting for on Winchester disk systems. It's our new 5¼-inch 5-million byte Winchester that adds cost effective mass storage to over 15 of the most popular microcomputers. Now everyone can enjoy the improved reliability, increased storage capacity, and faster speed of sealed-environment Winchester technology.

You can start with 5 million bytes, then expand the system with up to three add-on drives of 5, 10, or 20 million bytes. Our 5 million byte system has all of the advanced features of the larger capacity Corvus systems, including our low cost MIRROR back-up and multi-user CONSTELLATION network that allows up to 64 computers to share the Corvus data base and peripherals such as printers.

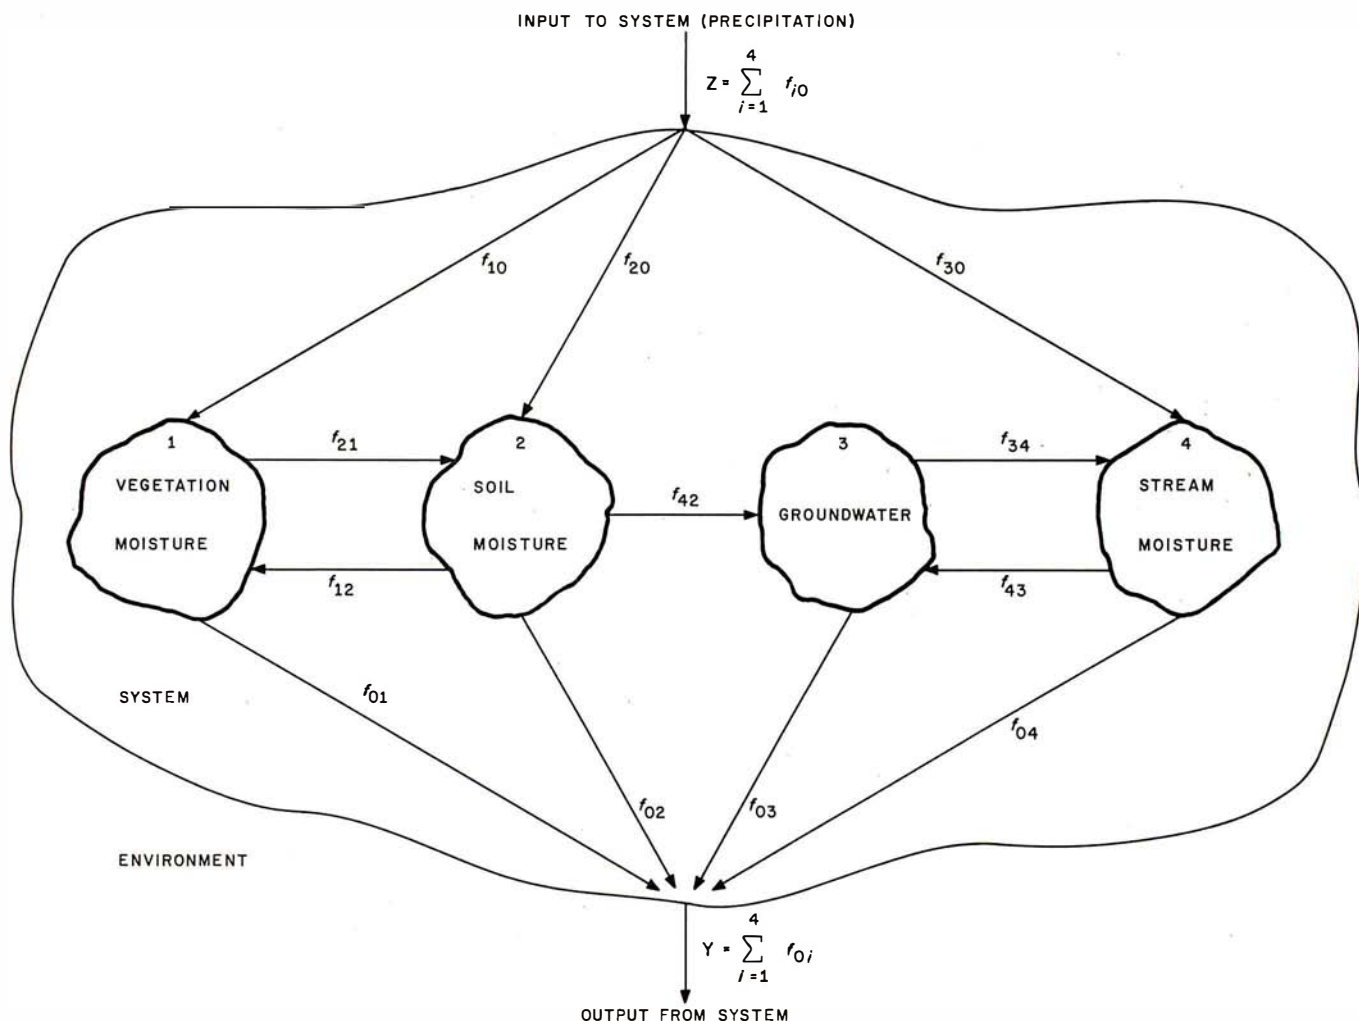

Figure 1: A conceptual model of the hydrology of the forested uplands surrounding Georgia's Okefenokee swamp. The model is subdivided into a system and its environment. The system receives environmental inputs (Z) and yields losses (Y) to the environment. Compartments represent areas of potential water accumulation. Flows and their direction are indicated by connecting arrows. Flows within the system are also given numerical designations. The first number represents the recipient-compartment number and the second represents the donor-compartment number.

Figure 2: Geometric interpretation of Euler's method for solving differential equations. Compartment size (x) is plotted versus time (t). Actual and predicted compartment sizes are shown.

one environmental input to the system: precipitation. Hence:

$$Z = f_{10} + f_{20} + f_{30} = z_1$$

where the numerical designation of z_k represents an input from environmental input k to the system. Flows within the system are represented by lines connecting compartments; arrows show the direction of flow. These flows are classified by two numbers. The first number indicates the compartment that receives the flow, and the second represents the compartment that yields (ie: produces) the flow. In figure 1, f_{21} designates an actual flow of moisture from vegetation moisture (compartment 1) to soil moisture (compartment 2). The output from the system (Y) back to the environment is the sum of the losses from each compartment i (f_{0i}). The purpose of the model is to be able to describe the response of each compartment (ie: how much water is present) at all times in the future.

New Hard Disk Control At Your Fingertips.

Introducing THE DAVID™ a giant step forward.

Konan, known for its innovative, versatile selection of high performance controllers, now offers THE DAVID.

THE DAVID is a series of intelligent HARD DISK CONTROLLERS for the Apple, S-100, Radio Shack, IEEE 488 and others.

Here are all the mighty things THE DAVID does:

- Error correction. 32 bit poly, 11 bit correct.
- Flaw mapping done by controller.
- Single high-speed bidirectional port.
- Fully buffered 256 and 512 byte sectors.
- Write pre-comp/data separation if required.
- Format command. Full or partial disk.
- Read next command.
- Power on diagnostics.
- Single/double density 5 1/4" and 8" floppy available in 8" hard disk products.

Hard disks currently supported include most 5 1/4's and CDC Finch. To come are all 8" hard disks with the SA1000 interface (7-81), and SMD drives (9-81). Other drive implementations available soon

These very low cost controllers are all host software and hardware compatible. That means total flexibility to change drive types or manufacturers, without rewriting software or designing new hardware.

In other words, THE DAVID is a giant in its own right...and every bit IN CONTROL. Put this powerful equipment to work for you. Give us a call on Konan's toll-free order line.

800-528-4563

Or write to: Konan Corporation
1448 N. 27th Avenue, Phoenix, AZ 85009
TWX/TELEX 9109511552

Konan offers a selection of other fine tape and disk controller products and is actively pursuing license agreements.

The Mathematical Model

The flows into and out of each compartment can be represented by a difference, or a differential, equation. In the model, the flows have been balanced so that no compartment will have a net gain or loss of moisture. The system is said to be at *steady-state*, and the corresponding model will be *static* in nature. The relationships in the flow diagram can be depicted by a system of linear differential equations. In the steady-state example, each differential equation representing a compartment is equal to 0, since inflows and outflows are equal.

For compartment 1 (vegetation moisture), the differential equation would be of the form:

$$\frac{dx_1}{dt} = \dot{x}_1 = f_{10} + f_{12} - f_{21} - f_{01}$$

(Note: In this equation, I have used a dot centered over a variable to simplify notation. Henceforth, this will mean the derivative of a variable with respect to time.)

The actual flows (f_{ij}) can be divided by the steady-state size of the corresponding donor compartment (x_j), or by the environment input (z_k), to give two types of coefficients: intercompartmental rate coefficients and environmental input coefficients:

$$a_{ij} = \frac{f_{ij}}{x_j}$$

and:

$$b_{ik} = \frac{f_{i0}}{z_k}$$

where:

i = the recipient compartment
 j = the donor compartment

and:

k = an environmental input number

Notice that the intercompartmental coefficients a_{ij} (of

matrix **A**) have the same numerical designation as their corresponding flows. Also notice that the environment is represented by a 0 in flows. When environmental input coefficients are formed, you subdivide the total environmental input **Z** into the different types (k) of environmental inputs. These coefficients (b_{ik} of matrix **B**) are dimensionless and express the percentage of an environmental input (z_k of vector **Z**) that each compartment receives. These numerical notations define the position of each coefficient in an appropriate coefficient matrix. For compartment 1 (vegetation moisture), the differential equation then becomes:

$$\dot{x}_1 = a_{12}x_2 - a_{11}x_1 + b_{11}z_{11}$$

After redefining all the differential equations into coefficients multiplied by the appropriate donor-compartment size or environmental-input size, you can organize the system of equations into a single matrix equation:

$$\dot{\mathbf{X}}_{n1} = \mathbf{A}_{nn}\mathbf{X}_{n1} + \mathbf{B}_{nm}\mathbf{Z}_{m1}$$

where:

n = the number of compartments
 m = the number of environmental inputs to the system
 $\dot{\mathbf{X}}_{n1}$ = a column vector of differential equations

$$\begin{bmatrix} \dot{x}_1 \\ \vdots \\ \dot{x}_n \end{bmatrix}$$

\mathbf{A}_{nn} = an n by n matrix of intercompartmental rate coefficients

$$\begin{bmatrix} a_{11} & \cdot & \cdot & \cdot & a_{1n} \\ \cdot & \cdot & \cdot & \cdot & \cdot \\ \cdot & \cdot & \cdot & \cdot & \cdot \\ \cdot & \cdot & \cdot & \cdot & \cdot \\ a_{n1} & \cdot & \cdot & \cdot & a_{nn} \end{bmatrix}$$

\mathbf{X}_{n1} = a column vector of initial compartment sizes

$$\begin{bmatrix} x_1 \\ \vdots \\ x_n \end{bmatrix}$$

\mathbf{B}_{nm} = an n by m matrix of input rate coefficients

$$\begin{bmatrix} b_{11} & \cdot & \cdot & \cdot & b_{1m} \\ \cdot & \cdot & \cdot & \cdot & \cdot \\ \cdot & \cdot & \cdot & \cdot & \cdot \\ \cdot & \cdot & \cdot & \cdot & \cdot \\ b_{n1} & \cdot & \cdot & \cdot & b_{nm} \end{bmatrix}$$

Photo 2: Zero-state response of the Okefenokee swamp hydrologic model simulated with the program in listing 2.

What has nine lives, three forms,
multiple faces and a price tag
that almost disappears?

The Magical Microline 80 Printer

It's magic! Well, almost. The Microline 80 will run all day at 80 cps with no duty cycle limitations. The head is warranted for 200,000,000 characters. That translates to over nine years on your TRS-80™, APPLE® or other small computer.

Want to change forms? The magical Microline 80 is three printers disguised as one. There is a whisper-quiet rubber platen for cut sheets and roll paper, pins on nine inch centers for pin feed stock and optional snap-on tractors that adjust to suit all your other forms. The Microline 80 also saves paper by letting you tear off as close as one inch from the last print line.

Want to change your image? The magical Microline 80 really does tricks. It prints upper

and lower case, condensed and double width characters and block graphics for charts, graphs and diagrams.

The Microline 80 is not a toy. With two motors, a rugged cast aluminum base and a head you never have to throw away, the Microline 80 is built to handle the most demanding business applications.

Which brings us to the biggest magic of all, the price tag, the one that almost disappears. If we're not the lowest, we are so close that it doesn't matter. There are stocking Microline distributors throughout the country. Call or write today for the name of the one near you and the price of the Magical Microline 80.

OKIDATA

Okidata Corporation, 111 Gaither Drive, Mount Laurel, New Jersey 08054 609-235-2600

Okidata is a subsidiary of Oki Electric Industry Company, Ltd.

and:

Z_{m1} = a column vector of environmental input sizes

$$\begin{bmatrix} z_1 \\ \vdots \\ z_m \end{bmatrix}$$

The matrices and vectors for the hydrologic model are:

$$A = \begin{bmatrix} -.369 & .035 & 0.0 & 0.0 \\ .189 & -.0483 & 0.0 & 0.0 \\ 0.0 & 0.0 & -.1632 & .000161 \\ 0.0 & .012 & .000444 & -.000623 \end{bmatrix} \times 1/(10 \text{ years})$$

$$X = \begin{bmatrix} 0.6500 \\ 2.8940 \\ 0.5250 \\ 55.4400 \end{bmatrix} \times 10^8 \text{ m}^3 \text{ water} \quad B = \begin{bmatrix} 0.60 \\ 0.07 \\ 0.33 \\ 0.00 \end{bmatrix}$$

and:

$$Z = [.233] \times 10^8 \text{ m}^3 \text{ water} / (10 \text{ years})$$

At best, this is a brief treatment of the use of linear differential equations in simulating the behavior of a collection of components. The hydrologic model herein is described by a deterministic general linear model (GLM) of donor-controlled differential equations. This type of model is among the simplest and the most straightforward to use; it has found wide acceptance in many fields. There are many books on general-systems theory and modeling that go into more detail than I can in this article. (For further reading, see references 4 and 5.) Higher-order differential equations can also be used to describe the time-varying changes in flows between compartments in a model. (See reference 2.) A nonlinear model would incorporate higher-order differential equations.

Numerical Solution of Differential Equations

Now that the model has been described with a system of linear differential equations, a method to solve these equations on a computer is needed. Several numerical methods are available for solving differential equations, but I will discuss only two methods and their implementation on microcomputers: the *Euler* and *Runge-Kutta* methods. I will briefly describe each method and list a corresponding algorithm written in BASIC (Disk BASIC 8001, for the Compucolor II microcomputer) for implementation on a microcomputer. For a more detailed description of these and other methods for solving differential equations, consult a book on numerical analysis or modeling. (See references 1 and 5.)

Euler's (Rectangular) Method

Euler's method is a simple but computationally inefficient method for solving finite differential equations. First, let's look at a geometric interpretation of this method. (See figure 2.)

Knowing the present value (state) of a compartment (x_t), you want to be able to predict the next value (x_{t+1}). Your differential equation for the compartment defines the slope of the line at time t . You project this slope to the next point in time ($t+1$), and add the change in x 's value (called Δx) to the value of x at time t (x_t). In many cases (such as in figure 2), the slope of the actual path of the compartment size may not be equal to the predicted value. In these instances, this algorithm has incorporated some error into the predicted value for the compartment size at the new time. In the Euler method, this error is proportional to the time step (Δt). This error can be reduced by decreasing the time step; however, that will increase the algorithm execution time on the computer.

The algorithm for the Euler method is:

1. $\dot{X}_t = f(X_t, Z_t, t)$
2. $X_{t+1} = X_t + \Delta t(\dot{X}_t)$

First, compute the slope of the line at t , which you assume is the same at $t+1$. In the hydrologic model, this is already determined by the time-invariant differential equations for each compartment. Second, you compute the new compartment size (x_{t+1}). Then you return to step 1 and continue the process for as many times as you wish. If you want to reduce the error in the algorithm, you can decrease your time step and perform the algorithm several times. In this way, you increase the number of iterations of the algorithm before you calculate your final value. Listing 1 is a program for the Euler algorithm written in Disk BASIC 8001.

Runge-Kutta Method

Runge-Kutta is a multistep, look-forward method for the numerical solution of differential equations. I will

Figure 3: Geometric interpretation of the fourth-order Runge-Kutta method for solving differential equations. Compartment size (x) is plotted versus time (t). Actual and predicted compartment sizes are shown.

NO MATTER WHAT MIRACLES YOUR COMPUTER MAY PERFORM, THE 739 PUTS IT DOWN ON PAPER.

To get full advantage of your computer's versatility you must have an equally versatile printer. One designed for your office. Suited to your budget. And built to deliver all the management information, correspondence – and graphics – that good management demands.

Introducing the Centronics Model 739.

Backed by Centronics 12-year reputation for rugged dependability and superior service, the Model 739 brings big printer technology into your office environment. Still, its desk-top size, super-quiet operation and handsome styling effectively mask the 12-hour-a-day workhorse within.

You can feed the Model 739 three different ways, fan-fold forms, bond sheets, roll stock. But that's just the beginning.

It's the end result that impresses you most. The high density dot matrix characters produce printout of superior quality. Correspondence quality. True descenders, proportionally spaced and justified right and left.

In short, one printer that will meet all your needs for under a thousand dollars.

The Centronics Model 739. The strong, silent miracle-maker. You can see and try it at your nearest dealer. Or contact Centronics Data Computer Corp., Dept. I-6, One Wall Street, Hudson, N.H. 03051. (603) 883-0111.

CENTRONICS® PRINTERS
THE REALITY OF COMPUTER TECHNOLOGY

discuss the fourth-order Runge-Kutta method. It is computationally more involved than Euler's method, but it incorporates less error into the prediction of the next compartment size (x_{t+1}). The geometric interpretation of this method is shown in figure 3.

As with the Euler method, knowing the present compartment value (x_t), you want to predict the next compartment value (x_{t+1}). First, you find the slope (XD) of the line at time t . Then, as in Euler's method, you calculate the compartment size (P), but at time $t + 1/2$. After you calculate the slope (XP) at P , make a second prediction of the compartment size (Q) at time $t + 1/2$. After you calculate the slope (XQ) at Q , make a third prediction of the compartment size (R), but at time $t + 1$. Again, calculate the slope (XR). Next, take a weighted average of all the slopes you calculated and determine your final prediction of the compartment size (x_{t+1}) at time $t + 1$. As with Euler's method, the Runge-Kutta method incorporates some error into your predictions; however, the error is now proportional to the fourth power of the time step (Δt) and is greatly reduced. The error can be reduced further by decreasing the time step.

The algorithm for the fourth-order Runge-Kutta method is:

1. $\dot{X}_t^D = f(X_t, Z_t, t)$
2. $X_{t+1/2}^P = X_t + \Delta t/2(\dot{X}_t^D)$
3. $\dot{X}_{t+1/2}^P = f(X_{t+1/2}^P, Z_{t+1/2}, t+1/2)$
4. $X_{t+1/2}^Q = X_t + \Delta t/2(\dot{X}_{t+1/2}^P)$
5. $\dot{X}_{t+1/2}^Q = f(X_{t+1/2}^Q, Z_{t+1/2}, t+1/2)$

Listing 1: *Compucolor II Disk BASIC 8001 program segment of Euler integration algorithm.*

6. $X_{t+1}^R = X_t + \Delta t(\dot{X}_{t+1/2}^Q)$
7. $\dot{X}_{t+1}^R = f(X_{t+1}^R, Z_{t+1}, t+1)$
8. $X_{t+1} = X_t + \Delta t(\frac{1}{6}(\dot{X}_t^D) + \frac{1}{3}(\dot{X}_{t+1/2}^P) + \frac{1}{3}(\dot{X}_{t+1/2}^Q) + \frac{1}{6}(\dot{X}_{t+1}^R))$

If you wish to reduce the error in the algorithm, you can decrease the time step (Δt), perform the algorithm several times, and save the last prediction of the compartment size. The Runge-Kutta integration method is incorporated into the GLM program in listing 2.

General Linear Model Program

So far, I have discussed the general linear model form and two different algorithms for the numerical solution of differential equations. I have combined these two topics and written a general-user program for mathematically modeling a system of components described by linear differential equations, solved for 100 time increments with a Runge-Kutta integration algorithm. This program was written in Disk BASIC and is given in listing 2. To use this program, you enter the number of compartments in and environmental inputs to your system, an intercompartmental rate coefficient matrix (**A**), the initial compartment values, an input coefficient matrix (**B**), and the environmental input values. You must also enter the desired number of iterations of the Runge-Kutta algorithm. This value is the reciprocal of the

NEW DISK SYSTEM POLISHES APPLE™

Plug into your Apple II or Apple II-plus with a Micro-Sci disk system, and you get Apple software compatibility. PLUS: Increased capacity, improved performance and higher reliability. And you save money, too!

COMPATIBILITY:

With thousands of programs currently available in Apple format—and many more being released every day—the ability to read and write diskettes interchangeable with the Apple disk II system is a MUST. The Micro-Sci disk subsystems offer this compatibility and more. Our disk system has a jumper-selectable boot PROM to move from DOS 3.2 to DOS 3.3, or to the language system at your fingertips.

CAPACITY:

The Micro-Sci A-40 system provides 40 tracks of storage (versus the Apple disk II system which offers only 35 tracks). The A-40's 5 extra tracks give you an additional 20,000 bytes of storage. And for even greater capacity, check out our A-70 system which offers a full 70 tracks of storage—exactly DOUBLE the storage capacity of the Apple disk II system!

PERFORMANCE:

Micro-Sci's disk systems' abbreviated track-to-track access time of 5msec (versus 15msec for the Apple disk II) means improved random disk access performance.

RELIABILITY:

Micro-Sci disk systems incorporate band-actuated head positioners for faster access and more accurate head positioning. Each disk system features Micro-Sci's improved media centering system which provides uncommonly accurate diskette registration, and virtually eliminates damage to the media centering hole.

PRICE:

The Micro-Sci A-40 drive, with controller, is priced at only \$549; the second A-40 drive is only \$449. The large-capacity A-70 disk drive with controller is only \$699, with the second drive priced at only \$599.

Call or write us today to order your new Micro-Sci disk system.

NEW CATALOGUE LISTINGS FROM **JOHN D. OWENS** ASSOCIATES, INC.

dBase II ASHTON-TATE...\$615

Brings power of mainframe database software to a microcomputer. Runs under CP/M®. Extremely easy to use. Manual and demo software\$50
MONEY BACK GUARANTEE.

DYNABITE SYSTEMS

Encompasses broad range of small business systems to sophisticated multi-processor, multi-user networking complexes. Hardware is modularly expandable. Extensive software includes business applications and word processing. Dynabite provides a whole package, complete with operator training, systems support, even business forms and furniture.

CAT 100 FULL COLOR GRAPHICS

Complete S-100 color imaging system with high performance video FRAME GRABBER. 3 fundamental functions are + digitization of video input in real time ++ image storage in dual-port, on-board memory +++ video input of buffered image in gray levels, NTSC color or RGB color.

Discount price \$1,875.
Write or call for option descriptions and pricing, too numerous to list here.

HOUSTON INSTRUMENTS HIPAD DIGITIZER

Create your own graphics using either stylus or optional cursor. Excellent for architectural drawing, business graphs, schematics, free form drawing, etc. More accurate and easier to use than keyboard input or joysticks. "Stream mode" allows continuous placement of coordinate pairs on 11" X 11" pad using either stylus or optional cursor. For S-100 systems and also Apple, TRS-80, PET.

Our discounted price \$ 755.

DMA-DOS North Star 8" FLOPPY SUBSYSTEM

A new operating system, completely CP/M® compatible that allows use of both 8" (Shugart single sided, double density via Tarbell controller) and 5¼" drives.

Complete hardware, software package \$1,910.

"Pascal-1 helps our customers meet complex, real-time needs."

Don Cutler, Chief Systems Engineer,
Electro Scientific Industries, Inc. (ESI), Portland, Oregon

More than 125,000 microcircuit resistors per hour can be adjusted by ESI's PDP-11/04 controlled laser trimming systems. The Pascal-1 compiler has given ESI fast, precise control since 1976. ESI's Don Cutler says, "Pascal-1 offers two big advantages—real-time performance and real problem-solving power."

Left: Pascal-1 controls ESI's laser trimming system. The laser repairs semiconductor memory chips, replacing faulty cells with alternates.

Below: ESI dominates the industry in the computer-controlled laser adjustment of microcircuits. Pascal-1 programming flexibility gives ESI access to many different markets.

Precise control in milliseconds.

Controlling a laser beam 4 to 8 microns in diameter, the ESI system moves the laser beam positioner at accelerations up to 3.5 G's, directs a trim cut, and decides where to go next, fast enough to trim 35 resistors per second. The Pascal-1 programs directly control all aspects of the trimming system. Some ESI customers use the laser trimmer to adjust the circuits of such devices as air flow transducers, audio filters,

and heart pacers, with the microcircuit activated to simulate operation. Pascal-1 handles these processes with speed and precision.

Easy-to-follow programming.

Writing correct code is easy because of the logical structure and clarity of

the language. ESI engineers save design and debugging time by writing control software in Pascal-1. ESI's customers also apply Pascal-1 to their own specialized production processes.

desired time step. The program will then simulate the system of compartments for 100 time units and plot a graph of the compartments versus time. To graph the compartment sizes, you must scale the simulation values and plot them on some output device. I have included code for this in listing 2, which will run unmodified on a Compucolor II microcomputer. If you intend to run this program on another computer, check to see if Disk BASIC 8001 coding is compatible with your system. See table 1 for information on the Compucolor PLOT command.

Using the GLM Program

When the Okefenokee swamp uplands hydrologic model is simulated with this program on a microcomputer (on an 8080 microprocessor), the execution time of the Runge-Kutta algorithm is 210 seconds. When Euler's method is used, the execution time is reduced to 51 seconds. This time savings can be beneficial, depending upon the computational accuracy of the microprocessor and systems software. It can be cost-effective to use the Euler algorithm if the computer computational error is larger than the difference in the error between the Euler and Runge-Kutta methods. To give you an idea of the memory requirements necessary for a simulation, the hydrologic model can be simulated with the program in listing 2 if your microcomputer has 8 K bytes of programmable memory.

You can solve the system of linear differential equations for the size of any compartment at any time t . When inputs (Z), rate (a_{ij}) and input (b_{ik}) coefficients are constant, and t is initially equal to 0, the solution is:

$$x_i(t) = e^{\lambda_i t} x_i(0) + \left(\sum_{k=1}^m b_{ik} z_k \right) \int_0^t e^{\lambda_i(t-\tau)} d\tau$$

zero-input response	zero-state response
------------------------	------------------------

where:

λ_i = eigenvalue of compartment i
 $= a_{ii}$ + behavior caused by intrasystem coupling

This is the general solution of the ordinary differential equations in the linear model. The solution has two distinct parts, which I call the zero-input response and the zero-state response. If you eliminate the zero-state response, then the solution of the equation will give you the values of each compartment when the system does not receive any environmental input (Z). This can be simulated by changing all the input coefficients (b_{ik}) to 0. In the case of the hydrologic model, you would, in effect, be asking, "How is the moisture in each compartment affected if there is no precipitation input?"

You can eliminate the zero-input response from the equation and ask, "How long would it take the system to

come to steady-state conditions if there were no moisture within the system to begin with?" This would be simulated by setting the initial compartment values (x_i) to 0. Photo 1 shows the zero-input response of the hydrologic model simulated with the program in listing 2. Photo 2 shows the zero-state response of the hydrologic model simulated with the same program.

You can start the simulation with different compartment sizes, a different environmental input size, or change the intercompartmental rate or input coefficients, and see how any or all of these changes will affect the outcome. I suggest that you devise a model that can be described with linear differential equations and simulate it at steady-state conditions. A good domestic simulation would be a model of heat losses, subsidies, and circulation within your home. If you have a slant toward business, you can simulate the flow of material or information into, within, and out of a commercial enterprise. As long as all the compartments and flows can be described in the same units, almost any type of measure can be simulated. Once you have completed the steady-state simulation, you can experiment with the GLM program to suit your taste. If you want to make the model more realistic, you can program the inputs to the system as sine waves, square waves, exponential functions, or an impulse function, instead of being constantly added as they are now. You can also test a compartment's sensitivity to a certain parameter by varying that parameter over its range and noting the differences in the compartment.

One warning: you must always be careful to analyze your simulations and decide if they actually mimic the real-world situation *before* you make sweeping generalizations and claims that you can predict how a system will behave under any given set of circumstances. With a little imagination, interesting and sometimes eye-opening results will be seen in mathematical simulations. ■

size-compatible floppy disk drive (except 14-inch model), controller,

DMA interface, chassis/power supply, cables, and DOS. And, they are completely compatible with most applications software on the market today.

Furthermore, LOBO's enhanced version of APPLEDOS™ permits you to build a data file as large as 16 megabytes.

No, you don't have to go on Safari to find mass memory. For the **BIG** story on Hard Disk Memory Systems, visit your nearest LOBO keeper, or contact our "Maha Roger"

Information Unlimited

The Dialog^{*TM} Information Retrieval Service

Stan Miastkowski, Technical Editor

No matter where we go or what we do, we're inundated with data. Each day magazines, newspapers, books, technical journals, and the broadcast media spew forth an amazing amount of material. One quickly learns that there is no way to possibly digest more than a tiny fraction of this material, and that's why this uncontrollable avalanche of paper and words has been aptly named the "information explosion." Fueling the frustration is the Herculean task of sifting through library-card catalogs and indexes to locate specific documents. It's a difficult and inefficient way to find the information you need. In addition, new problems crop up when you attempt to physically locate the texts you managed to find references to.

A much better method is available—if you have access to a modem (modulator-demodulator) and a terminal (or personal computer with communication software). The Dialog Information Retrieval Service (part of the Lockheed Missile and Space Company, Inc) offers on-line interactive access to literally millions of references and abstracts. With Dialog, you can locate information on any subject you can possibly imagine just by typing in words or phrases describing the topic you're interested in. You can search for references by names or companies, authors or publications, dates, product codes, or patent numbers (to name only a

few). By combining terms, the information you come up with can be as narrow or as broad as you want it to be. And, reprints of the articles or papers you've found references to can be ordered directly from your terminal.

When speaking of the amount of information available on the Dialog system, the numbers become mind-boggling. Dialog has some 50 billion bytes of information available on-line in some 130 individual data bases. That works out to a rough total of about forty million individual bibliographic abstracts and references (referred to as *citations*). If all the citations were printed on 8½-by-11-inch paper, the stack would reach higher than the Empire State building.

The newspaper and magazine indexes are among the most popularly oriented data bases—although Dialog also offers a number of specialized data bases for those in education, industry, applied science and technology, and social science and the humanities. Business information and forecasts are also available. Eighteen new data bases were added to the system in 1980, and at least a dozen more will be available by the end of the year. The system is available 110 hours a week in fifty countries, and all data bases are updated regularly. Each day tens of thousands of new citations are added. Also, if you wish to create your own private data bases for use on the system, Dialog provides this service.

Photo 1: The Lockheed Dialog computer room operator station. The system uses two mainframe computers—an IBM 3033 and an AS-9000 (sold in the United States by National Advanced Systems). Each computer contains a complete Dialog operating system; one handles Telenet calls, and the other Tymnet. Direct dial-in calls and leased lines are divided between the computers to even the loads. Because of the large amount of computer power available, the average wait for a response to a query is ten seconds—despite the fact that hundreds of users may be logged in during peak-use periods.

***TM** — Dialog is a registered trademark of the Lockheed Missile and Space Co, Inc.

TYPE-'N-TALK™ IS T.N.T.

The exciting text-to-speech synthesizer that has every computer talking.

- **Unlimited vocabulary**
- **Built-in text-to-speech algorithm**
- **70 to 100 bits-per-second speech synthesizer**

Type-'N-Talk™, an important technological advance from Votrax, enables your computer to talk to you simply and clearly — with an unlimited vocabulary. You can enjoy the many features of Type-'N-Talk™, the new text-to-speech synthesizer, for just \$345.00.

You operate Type-'N-Talk™ by simply typing English text and a talk command. Your typewritten words are automatically translated into electronic speech by the system's microprocessor-based text-to-speech algorithm.

The endless uses of speech synthesis.

Type-'N-Talk™ adds a whole new world of speaking roles to your computer. You can program verbal reminders to prompt you through a complex routine and make your computer announce events. In teaching, the computer with Type-'N-Talk™ can actually tell students when they're right or wrong — even praise a correct answer. And of course, Type-'N-Talk™ is great fun for computer games. Your games come to life with spoken threats of danger, reminders, and praise. Now all computers can speak. Make yours one of the first.

Text-to-speech is easy.

English text is automatically translated into electronically synthesized speech with Type-'N-Talk™ ASCII code from your computer's keyboard is fed to Type-'N-Talk™ through an RS 232C interface to generate synthesized speech. Just enter English text and hear the verbal

response (electronic speech) through your audio loud speaker. For example: simply type the ASCII characters representing "h-e-l-l-o" to generate the spoken word "hello."

TYPE-'N-TALK™ has its own memory.

Type-'N-Talk™ has its own built-in microprocessor and a 750 character buffer to hold the words you've typed. Even the smallest computer can execute programs and speak simultaneously. Type-'N-Talk™ doesn't have to use your host computer's memory, or tie it up with time-consuming text translation.

Data switching capability allows for ONLINE usage.

Place Type-'N-Talk™ between a computer or modem and a terminal. Type-'N-Talk™ can speak all data sent to the terminal while online with a computer. Information randomly accessed from a data base can be verbalized. Using the Type-'N-Talk™ data switching capability, the unit can be "de-selected" while data is sent to the terminal and vice-versa — permitting speech and visual data to be independently sent on a single data channel.

Selectable features make interfacing versatile.

Type-'N-Talk™ can be interfaced in several ways using special control characters. Connect it directly to a computer's serial interface. Then a terminal, line printer, or additional Type-'N-Talk™ units can be connected to the first Type-'N-Talk™, eliminating the need for additional RS-232C ports on your computer.

Using unit assignment codes, multiple Type-'N-Talk™ units can be daisy-chained. Unit addressing codes allow independent control of Type-'N-Talk™ units and your printer.

Look what you get for \$345.00. TYPE-'N-TALK™ comes with:

- Text-to-speech algorithm
- A one-watt audio amplifier
- SC-01 speech synthesizer chip (data rate: 70 to 100 bits per second)
- 750 character buffer
- Data switching capability
- Selectable data modes for versatile interfacing
- Baud rate (75-9600)
- Data echo of ASCII characters
- Phoneme access modes
- RS 232C interface
- Complete programming and installation instructions

The Votrax Type-'N-Talk™ is one of the easiest-to-program speech synthesizers on the market. It uses the least amount of memory and it gives you the most flexible vocabulary available anywhere.

Order now. Toll free.

Call the toll-free number below to order or request additional information. MasterCard or Visa accepted. Charge to your credit card or send a check for \$345.00 plus \$4.00 delivery. Add 4% sales tax in Michigan.

Type-'N-Talk™ is covered by a limited warranty. Write Votrax for a free copy.

At first glance, Dialog seems expensive. Each data base has an individual charge ranging from \$15 to \$300 per hour of connect time. (It should be stressed that the most-used data bases cost an average of \$50 an hour.) The cost becomes much more reasonable when you realize that an exhaustive search of any subject can be completed in an average of ten minutes. (Simple searches often take only a minute or two.) In addition, Dialog's response time is extremely fast because of the computer power available. Even during peak-use times, there is seldom a wait of more than ten seconds for the system to respond to a query.

It should be stressed that there are dangers inherent in using the Dialog system—especially if you're an "information junkie." It's extremely easy to become so enamored of Dialog's capabilities that you keep on calling up references and lose all track of time. The shock comes at the end of the month, when a very large bill arrives in the mail.

There are two ways to avoid this: the first is to *plan* what you'll be doing when you're logged on the system (explained in more detail below). The second is to keep track of your connect charges. Each time you log off or change data bases, Dialog prints an estimated charge. It's a good idea to keep a pad and a pencil next to your terminal and to keep a running total of charges at the end of every session.

Once you locate what you want, you can have the references and abstracts typed on your printer, although

this can get expensive at the normal speed of 300 bps (bits per second). A better way is to have the citations printed by Dialog's off-line high-speed printer. The cost is minimal (normally \$0.10 to \$0.25 per citation) and they are mailed out the next day. Or, as mentioned above, you can order actual reprints directly from your terminal.

Dialog History

Dialog started modestly as an in-house research and development project at Lockheed in 1963. At that time, an information sciences laboratory was established to deal with what was then recognized as the coming "information explosion." Two years later, what was essentially the first truly interactive information retrieval system was on-line for internal company use.

In 1968, Lockheed won a contract from NASA to design, program, implement, and maintain a computerized index for the half-million documents produced by the American space program. Called RECON (Remote Console Information Retrieval Service), the development process enabled Lockheed to fine-tune the specialized information retrieval command language, which was called Dialog.

After gaining more experience preparing information retrieval systems for the AEC (Atomic Energy Commission), the US Office of Education, and a number of other organizations, Lockheed, in 1972, decided to offer commercial service and officially named the system Dialog.

ATTENTION GOVERNMENT D P USERS AND PURCHASERS

We represent many fine micro products and manufacturers on the GSA Schedule, including

*Apple, Cromemco
and Computer Corporation of America*

Purchasing from the Schedule will save you the time consumed by the bid process. Products shipped throughout the United States and world-wide. Visit or write any of our stores for more information or to receive our catalogue of products represented.

State-of-the-art hardware demands state-of-the-art software

Operating Systems & Support Software from Technical Systems Consultants

To perform to its fullest capabilities, your hardware demands software designed to meet the specialized requirements of today's microprocessors. State-of-the-art software from Technical Systems Consultants keeps pace with the rapid advancements in computer technology so your hardware can live up to its full potential. Our complete line of state-of-the-art software includes:

The UniFLEX™ Operating System

UniFLEX, a true multi-user, multi-tasking system for the 6809 and 68000 microprocessors, supports such features as:

- hierarchical file systems
- device independent I/O
- four Gigabyte disk capacities
- full file protection
- inter-task communication via pipes
- I/O redirection
- task swapping
- full random-access files
- comprehensive shell command language

UniFLEX, structured for large-scale microprocessor systems, will not run with minimal systems and thus has avoided design compromise. (Off-the-shelf versions and OEM licenses are available.)

The FLEX™ Operating System

FLEX, a powerful, easy-to-use operating system designed for the 6800 and 6809 microprocessors, includes:

- dynamic filespace allocation
- random files
- batch job entry
- automatic space compression
- English error messages
- user environment control
- disk resident commands
- flexible device I/O
- printer spooling

Plus, FLEX can accommodate hard disks as well as floppies. The System is available off-the-shelf for a variety of systems and in a field-adaptable version. (OEM licenses available.)

FLEX and UniFLEX are trademarks of Technical Systems Consultants, Inc.

Support Software

Technical Systems Consultants offers a full line of state-of-the-art support software compatible to FLEX and UniFLEX, some of which are:

- native C and Pascal compilers for advanced programming
- extended BASIC for business and educational applications
- text editing and processing software
- sort/merge package for business applications
- variety of absolute and relocatable assemblers
- debug and diagnostic packages

... and more. Write or call today for our brochures describing our complete product line.

Sculpture by Joann Chaney

Industrial users continue to be Dialog's largest customers since much of the information in the specialized data bases (such as WORLD ALUMINUM ABSTRACTS or SURFACE COATING ABSTRACTS) is virtually unavailable anywhere else. Government agencies are also heavy users of Dialog's services—followed closely by educational institutions and libraries. Although personal computer users currently make up a very small percent-

age of Dialog customers, Lockheed officials told me they are in the process of adding more general-interest data bases to attract more individuals.

A Visit to Dialog

Dialog's facilities are located in Palo Alto, California. As might be expected, the hardware needed to handle the enormous amount of information contained within the Dialog system has taken over a large portion of its building. For those used to working with a personal computer and a floppy disk or two, a visit to Dialog's computer room is a humbling experience. Two mainframe computers (an IBM 3033 and an AS-9000) are both on-line at all times. When I visited Dialog in January, the AS-9000 had just been put on-line. This so-called "super-mainframe" is sold in the United States by National Advanced Systems. Since its claimed speed far exceeds that of any other mainframe, a Dialog spokesman told me he expects it to greatly increase the system's capacity.

The most interesting part of Dialog's facilities are the hard-disk drives—some 200 of them. Most are CDC (Control Data Corporation) units capable of storing 637 megabytes per drive. Although direct dial-up numbers are available, the majority of Dialog users access the system through Tymnet or Telenet (national data-communication networks that have local telephone numbers in many communities).

Lockheed officials term Dialog a value-added *on-line service supplier*. All of the approximately 130 data bases are put together by seventy *data base producers* who have contractual agreements with Dialog. The process of producing and updating each of the data bases is a large one involving literally thousands of people who review publications, journals, and newspapers—many on a daily basis. Many reviewers work at home and transfer their citations to floppy disks, which are sent to the data base producers. The final step is to transfer all the citations to IBM magnetic tape. Between ten and twenty of these tapes, each containing about 20,000 new citations, arrive at Dialog headquarters every day. Before the information is added to the system, *every word* in all citations is indexed. This is one of the most powerful searching features of the system.

Popular Data Bases

Although many of Dialog's data bases are extremely specialized (such as AQUACULTURE, BHRA FLUID ENGINEERING, or PHARMACEUTICAL NEWS INDEX), a number of the existing data bases are of general interest or of special significance to BYTE readers. Among them are:

- ERIC — One of the first Dialog data bases available, ERIC (Educational Resources Information Center) indexes some 700 publications of interest to every segment of the educational profession. About 3000 citations are added every month.
- COMPENDEX — This data base contains abstracted information from approximately 2000 of the world's

Photo 3: IBM reel-to-reel tape with new and updated data waiting to be placed on the Dialog system. Some twenty tapes arrive at Dialog each day from the outside organizations that prepare the data bases. Each tape contains approximately 20,000 individual references and/or abstracts.

Meet the Tiger with a bigger bite.

Introducing the remarkable 132-column Paper Tiger™ 560. The first full-width matrix printer to give you fully formed characters for a low \$1695.*

The new 560 features a staggered nine-wire ballistic type print head that overlaps dots in both horizontal and vertical planes. It bi-directionally prints up to 150 dense, text quality characters per second.

The 560 also features a reliable cartridge ribbon that lasts up to four times as long

presents a breakthrough in matrix printing, offering the user excellent print quality with the efficiency of a matrix printer. Employing a unique "staggered column" head manufactured by Integral Data Systems, the 560 creates high quality printouts by overlapping dots in both horizontal and vertical planes.

Paper Tiger 560 Print Sample

as spool and cassette ribbons, separate heavy-duty stepper motors to drive the print head and advance the paper, plus true tractor feed.

And famous Paper Tiger performance comes with every new 560. Like fixed or proportionately spaced text, programmable tabbing and business forms control, automatic text justification, print formats to 220

columns, parallel and serial interfaces, self-diagnostics, and more. All inside the most compact printer of its kind.

Need more stripes? Dotplot™, our high-resolution raster graphics package, is standard on every 560.

For data processing, word processing and small business applications, this is your Tiger. The business-sized Paper Tiger™ 560.

It's a Tiger you can count on.

Call TOLL FREE 800-258-1386 (In New Hampshire, Alaska and Hawaii, call 603-673-9100.) Or write: Integral Data Systems, Inc., Milford, NH 03055.

Paper Tiger 560

engineering and technical journals since 1969.

- **INSPEC** — This data base is similar to COMPENDEX except it also abstracts scientific bulletins and contains bibliographic references from scientific indexes. Included is a special section of computer and control abstracts.
- **ABI/INFORM** — This data base contains management and administration abstracts from some 400 business-related publications.
- **SCISEARCH** — This is an index to approximately 2600 scientific and technical publications since 1974.

Photo 4: IBM reel-to-reel tape drives used to load new and updated information into the Dialog disk drives.

SINGLE BOARD COLOR VIDEO
AND SOUND GENERATOR KIT \$350*
COLOR VIDEO KIT \$320*
*STANDARD KIT INCLUDES TMS 9918.
ADD \$25 FOR TMS 9918A.

COLOR VIDEO PROCESSOR

- Text, Graphics, Animation • 16 Colors • 256 x 192 Resolution • NTSC Composite Video Output • Uses TMS 9918
- Includes I/O Mapped 16K Video Memory • 3D Simulation with 32 Video Sprites • 2 Byte X-Y Positioning • Real Time Clock • 8 Level Interrupt Selection • Inexpensive RF Modulator allows easy connection to any color TV • Video over Video and Extended Graphics II Mode with TMS 9918A •

PROGRAMMABLE SOUND GENERATOR

- Music, Sound Effects, Tone Signaling, Ultrasonics • 27 Hz to 111 KHz Range • 3 Programmable Analog Channels with Separate Frequency, Volume and White Noise Control • 10 Selectable Envelope Wave Shapes under Software Control • Two 8-Bit Programmable I/O Ports for use as External Keyboard/Display Interface • Power Amplifier for driving External Speaker •

Texas residents add 5% sales tax. Prices include complete documentation with programming examples. PC board is solder-masked with gold contacts. Add \$100 for assembled and tested units. Send \$14.50 for 120 page manual, refundable with order. Compatible with Z80, 8085 and 8080 at 2 or 4 MHz on 5-100 buss.

ELECTRONIC DESIGN ASSOCIATES

P.O. Box 94055 Houston, Texas 77018 (713) 999-2255

This data base contains bibliographic references only.

- **MAGAZINE INDEX** — Perhaps the most popularly oriented Dialog data base, this is a cover-to-cover index of about 370 popular American magazines since 1976 and contains some 300,000 citations. It's particularly useful for most general-purpose reference questions since it indexes all articles, news reports, editorials, product evaluations, biographical pieces, short stories, poetry, recipes, and reviews. Approximately 5000 citations are added to this data base monthly.
- **SSIE CURRENT RESEARCH** — Compiled by the Smithsonian Science Information Exchange, this data base lists and summarizes most government-funded research projects either in progress or completed within the past two years.
- **GPO MONTHLY CATALOG** — This is the catalog (updated monthly) of US government publications.
- **ENERGYLINE** — This data base contains bibliographical citations as well as abstracts on all aspects of energy.
- **CONFERENCE PAPERS INDEX** — This is an index to meetings and symposia on all scientific and technical fields. Also included are references to conference papers (many of which have never been published). This is a very large data base to which about 10,000 citations are added each year.
- **NATIONAL FOUNDATIONS** — This lists all US private foundations that award grants for charitable purposes.
- **DISCLOSURE** — This data base, updated weekly, provides extracts of reports filed with the SEC (Securities and Exchange Commission) by all publicly owned companies in the United States.
- **NATIONAL NEWSPAPER INDEX** — This data base contains front-to-back indexing of *The New York Times*, *The Wall Street Journal*, and *The Christian Science Monitor* since January 1, 1979. It contains bibliographical references to everything included in the papers, with the exception of advertisements, weather charts, stock market tables, crossword puzzles, and horoscopes. About 15,000 new citations are added monthly.
- **NEWSEARCH** — This is a *daily* update of the MAGAZINE INDEX, MANAGEMENT CONTENT, the LEGAL RESOURCE INDEX, and the NATIONAL NEWSPAPER INDEX; it is invaluable for locating references within days of an article's appearance.
- **ENCYCLOPEDIA OF ASSOCIATIONS** — This data base contains detailed information on approximately 15,000 national nonprofit organizations. Included are listings for professional societies, trade associations, labor unions, and cultural and religious organizations.
- **STANDARD AND POOR'S NEWS** — Provides extensive news coverage as well as financial reports on

DIMENSION 3

COLOR GRAPHICS

Takes your PET™, CBM™ or TRS-80™ into the future

Our VDP color board features 256 x 192 pixel resolution, 15 exciting colors on 5 planes producing 3-dimensional graphics and true animation,

standard composite video output to either T.V. set or monitor (through optional R.F. Modulator)

Plus 3 channel digitally synthesized sound and 16k onboard RAM, driver software is available to maximize user flexibility. Install Dimension 3 in your present computer within minutes your-

self. No technical expertise required. Dimension 3 from Dimensional Design Inc. is available through Computer City, Canada (dealer enquiries welcomed).

PET, CBM are registered TM's of Commodore International. TRS-80 is a registered TM of Tandy Corporation. Dimension 3 is a registered TM of DDI Dimensional Design Inc. Artist's representation.

Photo 5: The Xerox 9700 high-speed printer used by Dialog for off-line printing of references. The printer operates at two pages a second and offers Dialog users a considerable savings over having their references printed out while logged onto the system. The average cost of having references printed off-line and mailed to you is \$0.10 to \$0.25 per citation.

Photo 6: Dialog's customer-service area, where specially trained personnel are available to offer advice. They can be reached by calling a toll-free number.

over 9000 companies. This data base is the equivalent of the Standard and Poor's *Daily News* and *Cumulative News* and often features full-length news stories.

- **DIALINDEX** — This is perhaps the most useful of the Dialog data bases and contains a collection of the file indexes for *all* data bases. DIALINDEX is a low-cost data base that allows you to ascertain which data bases contain the information you're searching for.
- **NTIS** — Compiled by the National Technical Information Service of the US Department of Commerce, this data base contains citations to more than 700,000 US reports covering government-sponsored research and development and engineering. Information on almost any subject imaginable is contained within this massive data base.

In addition, there are data bases covering psychology, chemistry, agriculture, medicine, biology, physics, and many other fields and disciplines. Dialog provides a free catalog of all the available data bases.

The Dialog staff and data base producers are continually adding new data bases to the system. By the end of this year, plans call for the addition of a biography index with over five million names, a book review index, an index of the Congressional Record, the Federal Index, a grants index, data from the Bureau of Labor Statistics, and Medline (a medical information data base designed for both physicians and consumers).

Accessing Dialog

There is no minimum fee or startup charges for the Dialog service. Once you've filled out an application and

Figure 1: Available Dialog data bases as of February 1981. Eighteen new data bases were added to the system in 1980; about a dozen more are planned to be operational by the end of 1981.

have been provided with a password, the easiest means of accessing the system is through either the Tymnet or Telenet networks. Currently, Tymnet charges \$8 per hour and Telenet charges \$5 per hour. The network connect charges are added to your Dialog monthly statement. (At the present time, Dialog bills monthly, but it is studying the possibility of billing through charge cards.) Dialog provides a list of telephone numbers and passwords/access numbers for both networks. If you have to make a toll call to access the networks, that's an addi-

tional charge. This expense is minimized, of course, for subscribers in Dialog's local area or those who have access to WATS (wide-area telephone service) lines. There are also direct-access lines to Dialog and incoming WATS lines are available at \$15 per month.

Using Dialog

There are a number of levels at which the Dialog system can be used. Most of the time, you'll find a simple search with a couple of terms the easiest way to go. A

16K BYTE 8/16 RAM

This fully static RAM board offers you the best of two worlds. Automatically switches between 8-bit or 16-bit operation, depending upon your CPU. High reliability, low noise design. 200 nsec. chips allow 8 Mhz. 8086 operation. Has extended addressing which can be disabled by a single switch. Prices: 1-9, \$280; 10-19, \$260.

OTHER RAM SAVINGS

16K PLUS RAM—this fully static RAM has become the standard of the industry. It features 200 nsec. chips and Cromemco style bank select using port 40H. Addressable to any continuous 16K on 4K boundaries. Any 4K block may be disabled. High reliability, low noise design. Prices: 1-9, \$280; 10-19, \$260.

16K STANDARD RAM—this fully static RAM is frequently used by OEMs in systems which do not require bank select. High reliability, low noise circuits. Uses 200 nsec. chips. Addressable to any continuous 16K on 4K boundaries. Any 4K block may be disabled. Prices: 1-9, \$265; 10-19, \$245.

64K STATIC 8/16 RAM

AVAILABLE JULY 6—This state-of-the art board uses 2167 16K static 70/100 nsec. chips in a "power down" mode. This means you can expect the first 64K in a system to use 1.6 amps with subsequent boards using about .8 amps each. Built for the same high reliability you have come to expect from using our other boards. Has 24-bit extended addressing which can be disabled. Initial quantities will be limited—reserve yours now to ensure early delivery. Prices: 1-9, \$1295; 10-19, \$1195.

All products fully assembled and guaranteed for one year.

NEW!

OEM PRICES

To obtain an OEM price list for the above memory boards, our 8086 and Interface product lines, write to us on your letterhead. Substantial additional savings for volume purchases.

TO ORDER: Many of your local computer stores have or can order these boards for you. They may also be ordered direct from the factory. Personal checks, CODs, VISA and MC accepted. Shipping paid by SCP for prepaid orders.

number of advanced searching functions are available; however, they probably won't be needed until you have quite a bit of experience on the system. Dialog's searching commands are simple, straightforward, and easy to learn. Dialog representatives do offer formal training classes on a regularly scheduled basis at locations

throughout the country. However, they're mainly designed for those with no computer experience and those who will be using Dialog as a regular part of their job (such as librarians). New users are given some free time on the system in order to have an opportunity to get a feel for how Dialog works.

Text continued on page 106

Listing 1: A typical search on the Dialog Information Retrieval Service—using the MAGAZINE INDEX data base. For the most efficient use of the system, as well as lower cost to the user, the search strategy (steps) should be planned on paper before logging in. See the text box of Basic Dialog Commands for a summary of the Dialog language. A SELECT statement can be up to 240 characters (when Boolean operators are used). Each search can create up to 98 sets, and there is a limit of one million citations per search.

Dialog system prompt

Self-Instruction for Assembly and BASIC Programming

Richer in knowledge

Once you build your own computer, you'll know it inside out. You'll know how to make it work for you, how to make it grow as your skills grow.

Richer in savings

Build-it-yourself kits cost less — about 30% less than comparable assembled computers. And you'll probably never need to pay someone for service because no one will know your computer better than you.

Is it hard?

Not at all. Heath makes it simple with easy-to-assemble designs and with step-by-step manuals that guide you from unpacking to final plug-in. And a Heathkit helping hand is always just a phone call away.

Innovative software

Heath offers you innovative programs for running your home or business, and exciting games for your family. You can have Microsoft™ BASIC™, one of the most powerful and widely used languages.

Heath User's Group (HUG) will share with you a library of over 500 programs to make your computer serve you in ways you never imagined.

Complete hardware

Choose from three computer systems:

The H89 All-In-One Computer gives you everything in one compact, convenient unit.

The flexible H8 gives you the freedom to combine memory and interfacing for exactly the system you require.

And the powerful H11A gives you 16-bit

power for your most complex programs. The Heathkit line includes video terminals, matrix and letter-quality printers and a complete selection of accessories. You'll even find award-winning self-instruction packages to teach yourself programming in BASIC or Assembly.

FREE CATALOG

It's all in the new 104-page Heathkit Catalog, along with nearly 400 electronic kits for your home, work or pleasure. Send for your free catalog today, or pick one up at your Heathkit Electronic Center.*

POWER-ONE D.C. POWER SUPPLIES

Our customers select their favorite models

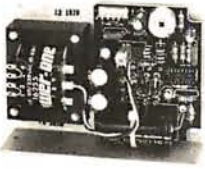

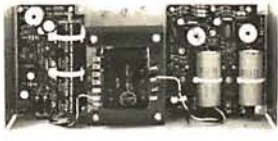

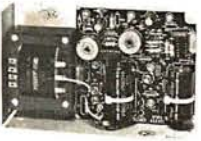

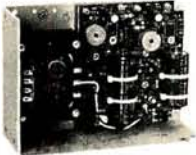

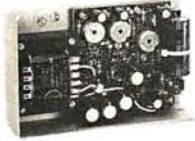

The choice wasn't easy. Not with 105 open frame linears and a full switcher line to choose from. Still, the top models of the past year — proudly pictured below — have been named.

Actually, this is a statement of Power-One's most popular D.C. power supplies — as determined by our customers. Obviously, applications vary widely, from

small floppies and micro-computers to large main-frame systems.

But one thing they all have in common. They're built by Power-One. Which means the most reliable power supplies available, at the lowest cost possible.

So take a look at our entire line. Send for our new 1981 Catalog and Facilities Brochure for details.

Text continued from page 102:

Searching

A Dialog spokesman stressed to me the importance of developing a general search *strategy*. This means sitting down with paper and pencil *before* logging on to the system, organizing questions or topics into logical groups, and then combining the groups through the use of logical (Boolean) relationships. This is an important point since wasting time with an inefficient searching strategy can become very expensive.

Since every word in every citation is indexed, the key to efficient searching is being as specific as possible. For example, the MAGAZINE INDEX contains 1.3 million individual citations; searching for all references to COMPUTER? (the ? is a "wildcard" character that matches any letters at the end of the word) yielded 4251 citations (see

listing 1). Obviously, steps must be taken to pare down the number of citations by being much more specific. Searching for MICROCOMPUTER? yielded 308 citations, still a healthy number. HOME(W)COMPUTER? OR PERSONAL(W)COMPUTER? yields 185 citations. (The (W) indicates the two words must be adjacent to one another.)

Besides the every-word indexing, all Dialog data bases contain special indexes that vary from file to file. If I wish to search for all home and personal computer articles in BYTE, I can AND my set of 185 citations with JN=BYTE—giving me a total of twenty citations. There are also special indexes which allow you to specify publication year, author name, article type (such as product review), or a number of other special features. Obviously, sitting down beforehand and planning your search

Can your word processor pass this screen test?

WordStar™ software does*! And does it better than any other word processing system. Not only do you get all the sophisticated features you'd expect from the high-priced WP system, with WordStar you have a true screen image of what your printout will look like **before you print it!**

With WordStar, you'll erase, insert, delete and move entire blocks of copy. Page breaks are

displayed and automatically revised on the screen. You can specify enhancements like underlining and boldfacing, and much more.

And WordStar's so much easier to learn because of its unique and extensive self-help menus. Every typist in your office can be an instant screen star. Call (415) 457-8990 and ask for a copy of our WordStar demon-

stration booklet. Remember, when you're the star, we're the star.

Basic Dialog Commands

Although there are many commands available in the Dialog searching language, a small number are the only ones used for the majority of searches. They include:

- **EXPLAIN** — an on-line help file that provides a detailed description of any specified command. The file also contains a list and description of all available data bases and system news.
- **SELECT** — sets aside index terms or groups of terms you specify into numbered sets (up to 98). More than one term can be combined into a single **SELECT** statement by inserting Boolean operators between terms. For example:

SELECT PETROLEUM AND PRICES AND OPEC AND PY=1979

A command line can contain up to 240 characters.

- **SELECT STEPS** — similar to **SELECT**, except that each individual item in a single command statement is assigned its own set number.
- **EXPAND** — used to display a listing of index terms that are alphabetically close to the term entered. Each term is given a reference number that can be **SELECT**ed, and the number of individual entries for each term is listed.
- **TYPE** — displays records on-line from the sets you've previously retrieved. A number of different formats and ranges can be entered. For example, the Dialog reference number, the title only, or the full record can be displayed.
- **PRINT** — orders the specified search results to be printed off-line using Dialog's high-speed printer. The printouts are normally received in three to four days. If you've retrieved a large number of references and/or abstracts, having them printed

off-line is considerably less expensive than using connect time to dump them to your own printer.

- **END/SAVETMP** — ends a search session and saves the search strategy (individual steps) you've used in an individual data base. The strategy is saved until the end of the calendar day and in that period can be used in other data bases by using the **.EXECUTE** command.
- **.EXECUTE** — searches a data base using the search strategy saved by the **END/SAVETMP** command. This eliminates the time and expense of having to enter individual steps every time a different data base is entered.
- **END/SDI** — ends a search session and instructs the Dialog system to run the same search strategy in the specified file each time the file is updated. If new information is found, it is printed off-line and mailed to you. (This service is not available on all Dialog files.)
- **KEEP** — saves the references and/or abstracts you specify in a special set from which documents may be ordered using **DialOrder**.
- **.ORDER** — automatically orders reprints specified by the **KEEP** command. The document supplier can be specified from a list supplied by Dialog.

For more information on Dialog and an application for service, contact:

Dialog Information Retrieval Service
Department 52-89/BT
3460 Hillview Ave
Palo Alto CA 94304
(800) 227-1617, ext 518
California (800) 772-3545, ext 518

makes the process proceed much more quickly, smoothly—and inexpensively.

If you have problems finding the correct search strategy, there is a toll-free hotline number to Dialog's Customer Service Department, which is open twelve hours a day. Besides helping beginning searchers, there is a specialist on each data base available who can help with a particularly complicated search.

Other Features

Dialog allows you to reconnect to the system within ten minutes of a disconnect (such as being dropped by one of the networks). Up until this time limit, all the set you've created will still be in the user area. Unfortunately, if the disconnect lasts longer, you'll have to start again from the beginning.

Users who wish to keep their own private data bases on the Dialog system can do so through the Private File Service. The cost for storage of data is \$12 per million characters per month. Currently, in order to take advantage of the Private File Service, users must supply Dialog with

IBM reel-to-reel tapes. However, Dialog's staff is in the process of developing a method that will enable users to build up their personal data bases from their own terminal.

Summary

Dialog is an invaluable service for anyone who needs to locate information on any imaginable subject from aardvarks to zymurgy. (Remember, the system is *not* designed to be everything to all people. Unlike the Source or Micronet, you can't play games or get the latest news from one of the wire services; not only are those services unavailable, but the cost of just "browsing" adds up very quickly.) Although the cost of the service seems expensive, the system's speed, efficiency, and interactive nature make it a net time and money saver when it's used for its intended purpose—finding references to information.

A Dialog staffer put it this way: "On the system, searching is an adventure." I can add that this adventure is *much* less frustrating than the computer game of the same name. ■

A Computer-Based Laboratory Timer

John Gibson
Physics Department
Alma College
Alma MI 48801

Accurate time measurement is a fundamental requirement of every elementary physics laboratory. Thanks to modern electronics, most laboratories now use digital timing devices that are activated by photocells or microswitches. This is a great improvement over the hand-operated mechanical stop-clocks that were prevalent only a few years ago, but most electronic timers are still unsatisfactory in one important respect: only the most sophisticated (and expensive) are able to rapidly make and record a succession of elapsed-time measurements.

Data acquisition and logging are natural provinces of the microcomputer. Since small microcomputers and microcomputer trainers are now so widely available, it is only natural to try to adapt them for use in a variety of laboratory measurements. This article will show how a very modest microcomputer can be wired and programmed for use as a sophisticated laboratory timer.

First we will examine the system-

independent design considerations for a microcomputer-based, two-channel, data-logging, millisecond timer. Then we will build this design on a Heath ET-3400 microprocessor trainer used with the ETA-3400 expansion accessory.

The Programmable Timer

The heart of this design is a microcomputer peripheral device called a *programmable timer*. This device connects directly to the microcomputer bus and may be configured (by software) to perform the timing measurements required. When the programmable timer and microcomputer are connected for use as a laboratory timer, there is a clear division of labor: the programmable timer performs the time measurements, and the microcomputer records the results.

Figure 1 is a programming model of a common programmable timer. In addition to its connections to the microcomputer bus, the timer also has a gate input \overline{G} , an external clock

input \overline{C} , and an output O. Inside the timer are three addressable registers:

- An 8-bit, write-only *control register* that is used to establish the timer's operating mode, in much the same way as a control register configures the operation of a common PIA (peripheral interface adapter);

- A 16-bit write-only *latch*. Its contents are divided into two 8-bit bytes, called M, for the more-significant (or high-order) byte, and L, for the less-significant (or low-order) byte. The latch's contents are preset to hexadecimal FFFF on system power-up or \overline{RESET} , and they may be changed at any time by the program running in the microcomputer;

- A 16-bit write-only *counting register*. A momentary logic-0 level at the timer's gate input causes this register to be loaded with bytes M and L from the latch. The counting register then decrements on each cycle of a specified timing signal. Further operating details are dictated by the timer's operating mode.

Text continued on page 114

At Hayes, we don't believe in second best. Or planned obsolescence. We believe in taking the state of the art to the limit. Our new Smartmodem, for example, is the most sophisticated 300-baud originate/answer modem you can buy. And yet, it is perhaps the easiest-to-use modem ever.

RS-232C Compatible. Smartmodem lets any RS-232C compatible computer or terminal communicate by phone with other computers and time-sharing systems located *anywhere in North America*. You get full and half-duplex operation with both Touch-Tone® and pulse dialing.

Auto-Answer/Dial/Repeat. Smartmodem can answer the phone, dial a number, receive and transmit data, and then hang up the phone—automatically! If desired, Smartmodem will even repeat the last command. You can depend on Smartmodem for completely unattended operation.

Completely Programmable. Smartmodem can be controlled using

Hayes Stack™

Microcomputer Component Systems

any programming language. Over 30 different commands can be written into your programs or entered directly from your keyboard.

Smartmodem also includes several switch-selectable features that let you tailor performance to your exact needs. You can "set it and forget it" for the ultimate in convenience.

Built-in Audio Monitor. Thanks to an internal speaker, you can actually listen to your connection being made. You'll know immediately if the line is busy or if you reached a wrong number—

and you don't even need a phone!

Status at a Glance. Seven LED's indicate Smartmodem's current operating mode: auto-answer, carrier detect, off hook, receive data, send data, terminal ready and modem ready. You're never left in the dark!

Direct-Connect Design. Smartmodem is FCC registered for direct connection to any modular phone jack—there's no acoustic coupler to cause signal loss and distortion.

Smartmodem, Smart Buy. Professional quality features. Versatile performance. A full two-year limited warranty. A suggested retail price of only \$279.

What more could you want? Perhaps the matching Hayes Stack Chronograph, an RS-232C compatible calendar/clock system.

Check out the Smartmodem wherever fine computer products are sold. And don't settle for anything less than Hayes.

Smartmodem.
The ultimate concept in modems
is now a reality.

Photo 1: Heath ET-3400 microcomputer trainer wired for use as a two-channel, data-logging, millisecond timer. The picture shows all circuit components except the phototransistors, which are connected to the type-555 integrated circuits (used as input comparators) via the two yellow-black twisted pairs of wires at the lower right.

Text continued from page 110:

The programmable timer is a versatile device with several operating modes, two of which are useful for elapsed-time measurements:

- *Pulse-width-comparison mode*, in which the timer measures the length of time its gate input is held at logic 0;
- *Frequency-comparison mode*, in which the timer measures the time between two successive logic 0s at its gate input.

These two types of time measurement are illustrated in figure 2.

Time-Interval Measurement

Each elapsed-time measurement

consists of six steps. The first three steps are performed by the programmable timer, and the last three are performed by the microcomputer.

The following three measurements are those performed in sequence by a timer programmed for operation in the *pulse-width-comparison mode* (by storing hexadecimal 58 in its control register):

1. The timer's gate input, normally at logic 1, is pulled to logic 0 at the beginning of the timed event. This loads the timer's counting register with bytes M and L from the latch.
2. The counting register then decrements on each cycle of a timing

Photo 2: Lamp and phototransistor attached to one end of the air track. For best timing resolution, the lamp is mounted so that its filament is vertical.

signal applied to the timer's external-clock input and continues to do so while the gate input is held at logic 0. 3. The gate input is driven back to logic 1 at the end of the timed event. If this occurs before the counting register reaches zero, the count stops, and the timer generates a program interrupt by pulling the microcomputer's active-low $\overline{\text{IRQ}}$ (interrupt-request) line to logic 0.

The three measurement steps performed by a timer programmed for operation in the *frequency-comparison mode* (by storing hexadecimal 48 in its control register) are as follows:

1. The timer's gate input, normally at

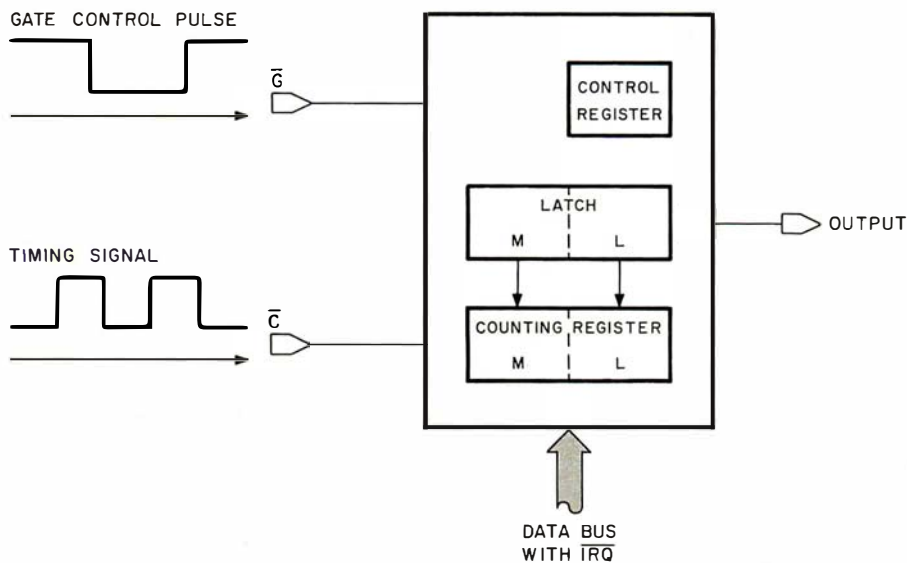

Figure 1: Model of the programmable timer, showing gate input \overline{G} , external-clock input \overline{C} , output O , the connection to the microcomputer bus, and the addressable registers. The arrows pointing from the latch to the counting register indicate the data transfer that takes place at the beginning of each count. Output O is not used in either the pulse-width-comparison or frequency-comparison modes of operation.

logic 1, is momentarily pulled to logic 0 at the beginning of the timed event. This loads the timer's counting register with bytes M and L from the

latch.

2. The counting register then decrements on each cycle of a timing signal applied to the timer's external-

clock input and continues to do so, even though the gate input returns to logic 1.

3. The gate input is again momentarily pulled to logic 0 at the end of the timed event. If this occurs before the counting register reaches zero, the count stops, and the timer generates a program interrupt by pulling the microcomputer's \overline{IRQ} line to logic 0.

For either operating mode, the timer ends its three-step sequence by signaling the microcomputer over its \overline{IRQ} line. The microcomputer's task begins when it receives the interrupt signal indicating that the timer has finished a count. The microcomputer then takes over the last three steps and:

4. Reads the timer's counting register.
5. Transforms the count into a useful measurement of elapsed time.
6. Saves the result.

We will now examine all of these

- Electronic Message Delivery

Interactive Business Solutions has contracted with **GTE/TELENET** for the corporate **TELEMAILSM** electronic communication system. Electronic message systems are the start of a complete revolution in human-to-human and human-to-machine communication.

We have decided to open our account to the general micro-computer public to encourage use of this exciting new technology. Now, for the first time, the individual user can access the same system that corporate customers have been enjoying. With any terminal and modem every user can send electronic mail and access multiple bulletin

board systems for only \$3.50 per hour during non-prime time. Non-prime time is normally 6 PM to 7 AM and weekends in the callers' local time zone.

We feel that overpriced telecommunications or exorbitant membership fees severely limit reaching thousands of computer enthusiasts who might otherwise be unable to use this revolutionary system.

Interactive Business Solutions is a software company, not a telecommunications company; by offering this low cost service we will be able to reach potential customers who might otherwise be unaware of our products.

Compare the following estimated costs of competitive systems and sign-on soon!

Text continued from page 115:

measurement steps in detail.

Step 1 is initiated by the gating device (eg: a photocell) that is connected to the programmable timer's gate input. Figure 3 shows two circuits for coupling phototransistors to the timer.

In figure 3a, the phototransistor is illuminated normally, and the programmable timer's gate input is held at logic 1. An object passing in front of the phototransistor will cause the programmable timer's gate input to be pulled to logic 0 and held there for as long as the light is blocked. If the timer is operating in the pulse-width-comparison mode, it will measure the length of time the light is blocked. If it is operating in the frequency-comparison mode, the timer will measure the elapsed time from the first extinction of the light to the second.

In figure 3b, both phototransistors are normally illuminated, and the timer's gate input is held at logic 1. An object passing in front of either phototransistor produces a momentary logic 0 at the programmable timer's gate input. A second momentary logic 0 occurs as the object passes in front of the second phototransistor. If operated in the frequency-comparison mode, the timer will measure the time from the first extinction of the light (at one phototransistor) to the second (at the other phototransistor).

THE HARD EDGE

IN SYSTEM PERFORMANCE...

31 MByte Formatted Capacity

The ADES S33 MByte Hard Disk Subsystem is the *HARD EDGE* in System Performance. The S33 transforms your S100 computer from a slow, floppy-bound machine into a high performance system. The S33 is a complete subsystem which includes the ADES PS100 S100 compatible hard disk controller card, the Priam DISKOS (TM) 3350 hard disk, an attractive desktop cabinet, power supply, CP/M* BIOS software, and ribbon cable. With its 31MB formatted capacity and a CP/M data transfer rate greater than 40K bytes/second the S33 can instantly increase the performance of any S100 computer system.

S33 FEATURES. The PS100 single card controller, which is IEEE-S100 compatible, contains an on-board processor, a 528-byte host interface RAM, and the hard disk interface. It has a fifteen command repertoire, on-board CRC to guarantee data integrity, user selectable base address, bank select feature, phantom RAM disable, and full S100 interrupt capability. It controls up to four Priam drives. In addition, the S33CBIOS software package allows easy integration into most CP/M systems. Application notes cover CBIOS integration and system boot directly from the hard disk.

EXPANDABILITY. With the S33 subsystem, you have freedom to grow in two different directions. First, the PS100 controller supports all Priam 8- and 14-inch hard disk drives, including the 68 MByte and 158 MByte models. As your database expands, so does your system's capability. Second, one PS100 controller handles up to four drives of any size and in any combination, providing a full range of capacities.

The S33 is only the first in the expanding line of ADES mass storage products. When you need an edge on your competition or more power in your personal system, look to ADES for the "HARD EDGE in System Performance."

HEI DEALS IN CARD READERS!

Whether you're looking for an optical read head for OEM use, or a complete microprocessor-controlled card reader with multiple features, bet on HEI for the best in price and performance!

- Our Model 121-1-10 read head is the most adaptable marked/punched card reader you can buy. Thirteen self-biasing channels, shaped-TTL output.
- The panel-mounted 122-1 is another useful OEM card reader. For punched cards only. Parallel output, TTL level, manual feed. Low-cost and accurate.
- For simple hand-fed applications, the parallel output

Model 121-1 is your best buy. Six-in./sec.* non-reciprocating feed through.*

- Need serial UART output in RS-232 format? Choose the Model 121-3. Reciprocating or feed through at 11-in./sec.
- The Model 121-4 is microprocessor-controlled, with a family of switch-selected options. Card feed-through or return at 6-in./sec., Hollerith to ASCII conversion,

parity bit, self-test, parallel/serial output, strobe or non-strobe. A powerful reader, accurate, compact and economical.*

**These units read marked or punched cards interchangeably, either pen or pencil, and a variety of colors. All have motorized drive of hand-fed cards, and are available with or without case, with or without power supply.*

Call us and talk card readers with the HEI specialists. We have even more to tell you about the low-cost, high-performance HEI line. For data collection tasks, you can't beat HEI card readers. Bet on it!

Text continued from page 118:

Step 2 states that the counter decrements on each cycle of an external timing signal. The period of this timing signal therefore becomes the *limit of resolution* of any time measurement. My applications required elapsed-time measurements that were accurate to the nearest ms (millisecond). This resolution was achieved by applying a 1 kHz timing signal to the timer's external-clock in-

put. (Later I will describe how this timing signal is produced by using another programmable timer to scale the microprocessor's clock frequency.)

Step 3 says that the count stops, and the microcomputer is signaled, if the timed event ends before the counting register decrements to zero. Recall that the timer's latch is preset to unsigned 65,535 (hexadecimal

Text continued on page 126

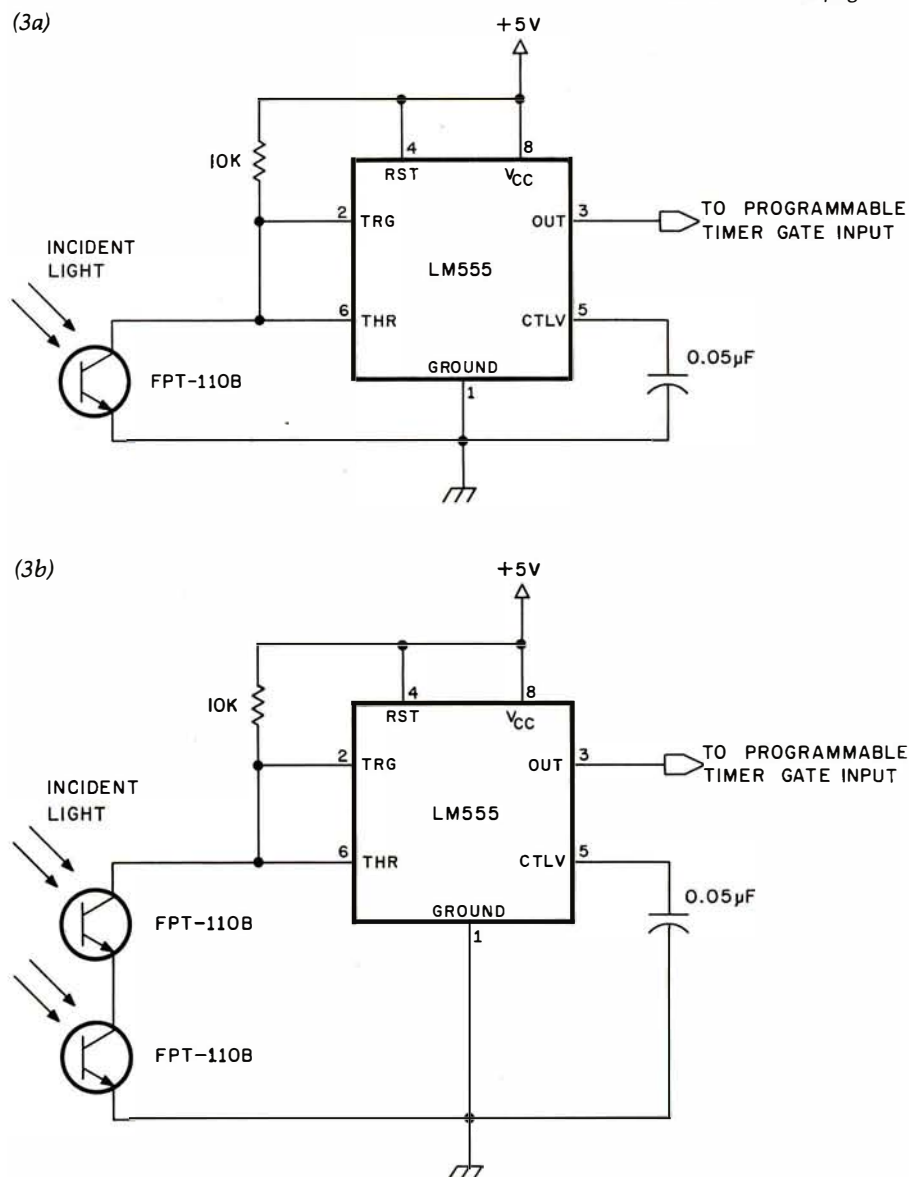

Figure 3: Two circuits for connecting phototransistors to programmable-timer gate inputs. Figure 3a shows control of the timer gate by a single phototransistor; figure 3b shows control by two phototransistors.

These type-555 integrated circuits are **not** used as timers; instead, they serve as inverting comparators. A 555 component connected in this manner has an input hysteresis in excess of 1.6 V, twice that of a type-7413 Schmitt trigger.

The 10 k-ohm resistor is chosen to saturate the phototransistor when illuminated, and hold it near its cutoff point when the light is blocked. The 10 k-ohm resistance is optimal for a 1 W incandescent bulb located 5 cm (approximately 2 inches) in front of the phototransistor. Other setups may require a different resistor.

The tool you need to chop your software backlog can be yours now

TRAM Drastically Cuts Development Time and Can Increase Your Productivity by 2000%

TRAM is an advanced TRAnsaction Access Method developed in PL/I to run on a variety of CPU's and operating systems. With its screen manager, you are completely freed from the burdens of screen communication such as location, length, rendition and even text itself. In addition, TRAM takes care of full data validation, default value generation and housekeeping of past values.

Look at what TRAM can do for you:

 **will assist you in design:**

TRAM forms, kept with your specifications, describe in detail the layout, along with the information and processing required to get and validate data. This documentation is of tremendous help when modification is required.

As an option, TRAM provides a multiple-level up-and-down generalized menu and chaining system allowing you to create tree-structured applications along with parameter passing.

 **will boost your productivity:**

TRAM takes care of line-column positions and all video attributes. TRAM has a unique "no show" feature which extends the versatility and scope of your software. TRAM has a powerful exception processing handler. TRAM controls protected areas and echoing. TRAM formats and redispays accepted data. TRAM retains past values for each item. TRAM builds default values based on past events. TRAM checks input for consistency, magnitude, match in a predefined list and even provides an interface for a search against your own external files, or, as an option, against a built-in fast direct access code file.

All those benefits lead to a deep reduction in the actual number of lines you have to code.

 **will give you environment freedom:**

All TRAM features can be used on any display video terminal with cursor addressing. TRAM will also work on a variety of CPU's and operating systems from micros to minis and even mainframes. Any displayable text is program independent and can be in any foreign language. Even more, the date format can be any arrangement of day, month and year, with or without month spelling. And the decimal point is what you want it to be. The

menu option gives you drive independence: programs, parameters and data files are freely scattered on different disk drive, with run-time choice.

CHECK IT BEFORE YOU BUY

Ask for the demo kit and you will see how a 2000 line program is reduced to 100. Send the coupon below, along with \$50 and here is what you get:

- The screen generator and editor. You will immediately start creating and editing your own screens.
- The screen examiner. You will display and examine your new screens and see TRAM features at work.
- The utility programs you need to adapt TRAM to your environment.
- The demo program with source listing and documentation.
- The full TRAM screen manager manual set.
- A sample of TRAM screen forms.

The demo kit is for Z80, 8080 CP/M based systems with a minimum of 48K and comes on an 8" single side single density soft sector diskette. TRAM's screen manager price is \$295 and can be yours for \$245 if bought less than 30 days after the demo.

(CP/M, MP/M and PL/I-80 are registered trademarks of Digital Research)

Purchase price includes a 6 month maintenance and update period.

So act now to see how TRAM will solve your problem.

Concentrate on your application, TRAM concentrates on the technical burden.

TRAM is available now for Z80, 8080 CP/M and MP/M systems with 48K minimum and requires the PL/I-80 compiler (or the PL/I-80 run-time library if your application is not in PL/I).

Coming soon are versions for 8086/8088, Prime Computers, Data General, Digital Equipment (LSI 11, PDP 11 and VAX), IBM and others. Coming soon also are the multi-key multi-user file management system, the report writer, the file inquirer and the transaction processor.

It isn't just for small business anymore!

CAMBRIDGE, MA. 02139

Circle 67 on inquiry card.

Listing 1: Interrupt-service routine for reading a programmable timer's counting register, converting the number to a decimal elapsed time and saving the result.

Line	Label	Op Code	Comments
1		LDA A M	Read the timer's counting register and clear the timer's
2		LDA B L	interrupt request.
3		LDX POINT	Fetch the pointer.
4		CPX #LAST+3	Are all memory locations loaded?
5		BEQ DONE	Branch if all are loaded.
6		COM A	Complement the count to get the hexadecimal elapsed
7		COM B	time.
8		STA A 1,X	Save the hexadecimal elapsed time in this memory loca-
9		STA B 2,X	tion.
10		LDA A #\$80	Set bit 7 to show that this memory location has been
11		STA A 0,X	loaded.
12		BSR BD	Perform a subroutine that converts the 2-byte hexa-
			decimal number in 1,X and 2,X to a 2½-byte BCD
			number in 0,X, 1,X and 2,X.
13		INX	
14		INX	Advance the pointer to the next 3-byte memory loca-
15		INX	tion.
16		STX POINT	Save the new pointer value.
17	DONE	RTI	

FFFF) on system power-up or RESET. Unless changed by the program, this value is automatically loaded into the counting register at the beginning of each timed event. The counting register cannot decrement more than this number of counts. A 1 kHz timing signal will therefore permit a maximum time measurement of 65,535 ms, or 65.535 seconds.

Step 4 begins the program's interrupt-service routine by reading the timer's counting register. Aside from fetching the counting register's contents, this step has another purpose: the read operation causes the programmable timer to release the microcomputer's *IRQ* line. This is important, because it is the *only* way the timer's interrupt request can be cleared.

Step 5 indicates a need for transforming the count. The quantity read from the timer's counting register (for a 1 kHz timing signal) is the *hexadecimal* number of milliseconds *remaining* until the counter decrements to zero. To be useful, this number should be transformed into the *decimal* number of milliseconds *elapsed* during the timed event. This transformation is a two-step process:

5a. Convert the hexadecimal milliseconds remaining to hexadecimal milliseconds elapsed during the timed event.

5b. Convert the hexadecimal milliseconds to decimal milliseconds.

Step 5a is easily performed. If the timer's counting register is set to hexadecimal FFFF at the beginning of the count, the hexadecimal number of elapsed milliseconds is equal to $FFFF - n$, where n is the remainder read from the counting register at the end of the timed event. But, since $FFFF - n$ is just the one's complement of n , step 5a simply requires taking the one's complement of the number read from the counting register.

Step 5b is a hexadecimal-to-decimal conversion routine. Any appropriate routine may be used here. Listing 2 contains a fully documented demonstration program that includes a suitable hexadecimal-to-decimal conversion routine.

DOCUMATE/PLUSTM

Indexes and Sorts WordStarTM

DocuMate/PlusTM Features . . .

- 8-Level Indexing
- Table of Contents Generation
- New Self-Contained Sort Feature
- "See" and "See Also" References
- New Output Format Control
- New Cross-Document Index Generation

DocuMate/Plus generates completely collated tables of contents and alphabetical multi-level indexes from WordStarTM text files of any length . . . as detailed as you desire.

DocuMate/Plus is refreshingly easy to use, and its internal sort feature can save you the cost of an expensive stand-alone sort program. Just type simple DocuMate commands right into your text file. DocuMate/Plus's "Extract" feature automatically finds and places all index references in a separate work file for sorting and collating.

DocuMate/Plus builds master indexes for many documents, such as research notes, books and articles, speeches, hardware and software documentation, and business correspondence.

DocuMate/Plus is today's most flexible indexing program available for professional word processing.

DocuMate/Plus is available on standard 8" CP/M and 5¼" Northstar diskettes.

- DocuMate/Plus Program with Manual \$125.00
- Manual Only \$ 10.00
- Special Pricing to update existing DocuMate users.

INTRODUCING A REVOLUTIONARY DOT MATRIX PRINTER WITH JUST ONE HAMMER. AT AN INCREDIBLE PRICE – JUST \$399.

The Uni-Hammer Replaces Seven... or More.

Revolutionary? We don't know what else to call it. An impact printer with a single rugged hammer, rather than the seven or more individual solenoids and print wires found in conventional dot matrix printers.

At an incredible unit price of \$399!

Because of the unique Uni-Hammer design, the GP-80M is smaller and simpler than other dot matrix printers yet costs considerably less. Which makes it a natural for OEMs needing compact, reliable, low cost printers for system use, and also for the personal or small business user who wants a quality impact printer at the lowest possible price.

How the Uni-Hammer Works

The GP-80M, which prints both graphics and alphanumerics, uses a rotating platen with protruding splines positioned behind the paper (see diagram). The character or graphics image is created by multiple hammer strikes in rapid succession as the print head advances across the paper. The precision gear train assures exact positioning of the print hammer relative to the splines on the platen, to provide excellent print quality.

A Complete Printer

The GP-80M has features comparable to printers selling for thousands of dollars. These include upper/lower ASCII character sets, ribbon cartridge, 80 columns at 12 characters per inch, adjustable tractor feed, original and 2 copies, 30 characters per second, and full graphics with a resolution of better than 60 dots per inch in both horizontal and vertical axes.

Plenty of Interfaces

Interfaces include Centronics parallel, RS232C, serial TTL, 20mA current loop, IEEE-488, Apple, TRS-80, PET, HP-85... and more.

See the GP-80M in action at your local computer store, or write for the distributor in your area.

A Product of the Seiko Group

The GP-80M is manufactured by Seikosha and exclusively distributed in the USA by Axiom. It took a company such as the Seiko group, world's largest watch manufacturer, with vast experience in the design of small, intricate, precision products, to come up with a totally new concept in dot matrix printing.

Step 6 states that the microcomputer must save the result (ie: save the transformed time measurement). If several time measurements are made in rapid succession, the computer must log these results in a manner that permits easy access.

Successive time measurements are saved in successive 3-byte memory locations in a reserved memory block. Why 3 bytes? Although the binary number read from the timer's counting register is contained in only 2 bytes, that number converted to decimal form may require five BCD (binary-coded decimal) digits (for a maximum elapsed time of 65,535 ms). Stored in "packed" BCD form, such a number occupies $2\frac{1}{2}$ bytes of memory. I allow 3 bytes, because I use bit 7 of the most-significant byte as a flag that is set when the memory location has been loaded with a measured time.

Listing 1 is a set of MC6800 instructions for accomplishing steps 4, 5, and 6 of the measurement sequence. This interrupt-service routine reads

the timer's counting register, transforms the count into a decimal-radix elapsed time, and saves the result.

Lines 3, 4, and 5 of the listing merit further explanation. POINT always contains the address of the next memory location in which a time measurement will be stored. Line 3 loads the index register with this pointer. Line 4 examines the pointer to see if the allocated memory space has been exceeded. If it has, line 5 causes a skip of the remaining steps.

Notice that the testing of the pointer does not occur until *after* the timer's counting register has been read (lines 1 and 2). The counting register must *always* be read, whether or not the results are to be saved. Otherwise the timer's interrupt request will not be cleared.

A Programmable-Timer Module

Thus far, I have described how a single programmable timer may be used with a microcomputer to measure and log elapsed times of suc-

cessive events. I now wish to show how a particular commercial device, the Motorola MC6840 programmable-timer module, may be used in the design of a two-channel event timer.

Figure 4 is a pin-assignment diagram for the MC6840. This integrated circuit contains three independent programmable timers, each with gate input, external-clock input, and output. There are ten addressable registers. Nine of these are the control registers, latches, and counting registers for the three timers; the tenth is a status register containing interrupt flags. (Details of register selection for the MC6840 were described in my earlier article, "A Computer-Controlled Light Dimmer," January 1980 BYTE, page 56.)

A two-channel event timer requires the use of one programmable timer for each channel. If timer 1 is assigned to channel 1 and timer 2 is assigned to channel 2, then timer 3 may be used to scale the microprocessor clock frequency to provide the timing signal required by timers 1 and 2.

To operate as a frequency scaler, timer 3 must be configured for use in the *continuous operating mode*. This is achieved by grounding the timer's gate and loading hexadecimal 82 into its control register. The timer then produces a square wave whose frequency is equal to that of the micro-

TYPEWRITER TURNS PRINTER FOR UNDER \$300

Our simple plug-in module converts Olivetti or Olympia electronic typewriters into computer printers or computer terminals!!

- No modifications to the typewriter
- Takes only minutes to install
- NO EXPERIENCE NECESSARY
- Does not affect Olivetti warranty
- Does not affect normal typewriter functions
- All typewriter functions can be computer controlled
- RS232C, IEEE and parallel interfaces available
- KSR version turns typewriter into a computer terminal
- Fully assembled, tested and burned in

Available for the following:

Olivetti ET121 R/O \$295
KSR \$445
Olympia ES100 R/O \$295
KSR \$445

All prices in U.S. funds.

Please make cheque or money order payable to:

MEMORY

Blackout!

A PROBLEM FOR YOUR PRESENT RAM?

Don't Curse the darkness. Get our non-volatile memory and watch elephants turn green with envy!

Are you looking for a reliable non-volatile memory on a rugged industrial-standard IEEE-696 S-100 card? Your search is over. Our CMOS memory modules have a battery backup that is guaranteed to keep programs and data intact for a year. We didn't sacrifice performance for non-volatility in the design of our CMEM module, so you get all the card you're looking for . . . we even supply the battery.

- ☐ 32K on a single board, 8 or 16-bit cpu compatible.
- ☐ Switch selectable addressing on 4K boundaries.
- ☐ Extended memory addressing through 24-bit lines.

- ☐ 250 nanosec access time, no wait states required.
- ☐ Runs at 4 MHz for both 8 and 16-bit S-100 systems.
- ☐ Programs developed & stored w/out disks or tapes.
- ☐ Power fail interrupts.
- ☐ Software programmable write-protect window.
- ☐ 8K bytes-\$695, 16K bytes-\$895, 32K bytes-\$1095.

The DUAL 77 Data Acquisition and Control System is a turnkey system built to industrial standards and it comes ready to perform. As with all our systems and modules, our computer was designed with the wicked environment of the real world in mind. BASIC language makes programming easy and the built-in interface simplifies access to hundreds of sensors. The enormous expandability of the system allows its growth to meet your increasing needs, even if you enjoy learning new languages. The DUAL 77 is economical; \$9995 or higher with options.

A/D CONVERTER

This S-100 based module is designed to withstand the rugged environment of the laboratory or in industry for general use in converting analog signals to digital information.

- ☐ 32-channel single-ended, 16-channel differential.
- ☐ 12-bit resolution and accuracy.
- ☐ 30-microsecond conversion time.
- ☐ Instrumentation amplifier on board.
- ☐ BASIC program for use provided.
- ☐ \$695 or \$785 w/1-1000 gain transducer amplifier.

D/A CONVERTER

The AOM-12 analog output module is an industrial level digital-to-analog (D/A) converter which converts digital commands from the computer into analog voltages.

- ☐ 12-bit $\pm 1/2$ L.S.B accuracy over full 0-70°C temperature range.
- ☐ Voltage outputs of 0-10 volts, ± 5 volts, or ± 10 volts.
- ☐ Short circuit protection on all voltage outputs.
- ☐ Switch-programmable port base address for multiple boards.
- ☐ \$575

NON-STOP CLOCK

Now you can keep time even with the main power off. Our industrial level clock module utilizes a backup battery circuit for a full year.

- ☐ Day, date, hours, minutes and seconds.
- ☐ Features new LSI CMOS chip.
- ☐ Vectored interrupt capability.
- ☐ Dip switch selectable port address.
- ☐ Simple BASIC or Assembly language program.
- ☐ Precision quartz crystal clock. ☐ \$250

DEALER AND OEM INQUIRIES INVITED

Circle 52 on inquiry card.

Figure 5: Connection of the MC6840's timer-section 3 for use as a frequency scaler. The microprocessor's clock frequency is divided by $2(n+1)$ to provide a timing signal to timers 1 and 2.

comparison mode or the frequency-comparison mode, then its individual interrupt flag is set whenever the timer completes a time measurement before its counting register decrements to zero. The flag is automatically cleared when the status register and the timer's counting register are read (in that order).

The composite interrupt flag is the logical OR of the individual interrupt flags. For the operating modes that I have selected for the three timers, the composite interrupt flag will be clear only if both the timer 1 and timer 2 flags are clear. (Timer 3's configuration as a scaler prevents it from affecting the composite interrupt flag.)

Bit 0:	Timer 1 individual interrupt flag.
Bit 1:	Timer 2 individual interrupt flag.
Bit 2:	Timer 3 individual interrupt flag.
Bit 3:	Composite interrupt flag.
Bits 4 thru 7:	All read as zero.

Table 1: Assignment of bits in the status register of the Motorola MC6840 programmable-timer module.

The MC6840 pulls the microcomputer's $\overline{\text{IRQ}}$ line low when the composite interrupt flag is set, which, for these operating modes, is whenever the timer 1 or timer 2 individual interrupt flags are set. The $\overline{\text{IRQ}}$ line is released only when both timer 1 and timer 2 individual interrupt flags are cleared.

Upon receipt of the interrupt request ($\overline{\text{IRQ}}$ line pulled low), the microcomputer performs an interrupt-service routine that examines the status register to find which timer's interrupt flag is set. With that deter-

COBOL.

The language of business. The language of Micro Focus.

CIS COBOL.

We've spoken for five years . . .

. . . nothing but COBOL. We've put more thought into COBOL than anyone else. And more investment.

Our CIS COBOL product family brings you the most successful business programming tool ever devised — COBOL — on the most cost effective hardware.

It is designed to meet the needs of business software users through the 80's. Comprehensively. From the smallest microsystem to sophisticated, multiprocessing distributed architectures.

We speak Standard COBOL . . .

. . . as defined by the ANSI X3.23-1974 standard. Thanks to ANSI and GSA, COBOL has the most rigorously defined and enforced standard of any software. You can buy CIS COBOL with complete security. GSA has already fully evaluated it for you — buy their Validation Summary Report.

CIS COBOL's second year of GSA certification qualifies it for government bids and other blue-chip contracts. CIS COBOL's performance and reliability are objective facts.

We speak COBOL innovatively . . .

. . . we pioneered simple but powerful language extensions for interactive screen-handling. CIS COBOL also provides other powerful facilities vital in the microcomputer environment, like dynamic loading of segments and CALled programs.

We also take full advantage of unique hardware features. Our Apple II implementation gives you color graphics — and tone generation — all from within a CIS COBOL program!

We have our products speak COBOL too . . .

. . . to boost your programming productivity. Our FORMS-2 utility is a COBOL source code generator. It makes possible our unique demonstration "How to create a COBOL program in 20 minutes."

The code generated by FORMS-2 is standard COBOL. You can build on it to create highly sophisticated interactive programs. We ourselves will be building on it to create even more powerful productivity tools for the 80's.

We speak COBOL on a great many systems . . .

. . . giving you a large available market if you're developing software for resale. And a high degree of hardware independence if you're an in-house user. CIS COBOL is available off-the-shelf for any systems based on:

8080/Z80	with CP/M
8086	with CP/M-86
DEC LSI-11	with RT-11
Apple II	with CP/M.

CIS COBOL is also sold under license by over 25 computer manufacturers worldwide.

. . . and we will speak it soon on many more

. . . thanks to our System Transfer Technology, which enables us to port COBOL to new processors and operating systems more quickly than ever before. It has already enabled us to be first on a number of processors—a tradition we mean to continue.

Ask your supplier for more information or for a demonstration. Or call us direct at (408) 496-0176 for an in-depth brochure.

New JAWS-IB

The Ultrabyte Memory Board

Due to the tremendous success of our JAWS I, we were able to make a special purchase of first-quality components at below-cost prices for JAWS-IB. And we are sharing our cost saving with you. But don't be surprised if the next time you see this ad the prices have gone up substantially. Better yet, order now, and get the best memory on the market at the best price on the market.

ONE CHIP DOES IT ALL

Jaws-IB is the Rolls-Royce of all the \$100 dynamic boards. Its heart is Intel's single chip 64K dynamic RAM controller. Eliminates high-current logic parts... delay lines... massive heat sinks... unreliable trick circuits. JAWS-IB solves all these problems.

LOOK WHAT JAWS-IB OFFERS YOU

Hidden refresh... fast performance... low power consumption... latched data outputs... 200 NS 4116 RAM's... on-board crystal... RAM Jumper selectable on 8K boundaries... fully socketed... solder mask on both sides of board... phantom line... designed for 8080, 8085, and Z80 bus signals... works in Explorer, Sol, Horizon, as well as all other well-designed \$100 computers.

10-DAY MONEY-BACK TRIAL: Try a fully wired and tested board for 10 days — then either keep it, return it for kit, or simply return it in working condition.

mined, it then performs the remaining steps (4, 5, and 6) of the program's data-acquisition routine.

Building the Timing System

I have just described the system-independent design details of a two-channel, data-logging, millisecond timer using a Motorola MC6840 programmable-timer module; I will now show you how to implement this design on a Heathkit ET-3400 microprocessor trainer.

We have seen that a millisecond-resolution timer requires a 1 kHz external timing signal, and we have seen how this external timing signal can be scaled from a 1 MHz microprocessor clock. The implementation assumes the use of an ET-3400 trainer with a 1 MHz crystal-controlled clock. This 1 MHz clock is a feature of all trainers modified for use with the Heathkit ETA-3400 expansion accessory.

The demonstration program (see listing 2) assumes the availability of

340 bytes of memory for program storage. This exceeds memory available in the trainer alone, unless some page-zero memory is used for this purpose. Addition of the ETA-3400 expansion accessory easily provides the additional program-storage space required.

Figure 6 is a complete circuit diagram for the two-channel, millisecond timer. The entire circuit (except for the phototransistors) may be wired on the trainer's built-in breadboard socket (see photo 1).

Figure 6 contains one system-dependent feature that requires explanation. The ET-3400 trainer uses a bidirectional buffer to couple its data bus to outside devices. Normally set in the write (output) state, this buffer is placed in the read (input) state by pulling the trainer's RE (read enable) line low. The 7445 binary-to-decimal decoder in figure 6 provides the address decoding needed to do this each time the trainer reads the MC6840 registers. *Text continued on page 144*

Listing 2: Complete timer-demonstration program for using the Motorola MC6840 with Heath's ET-3400 microcomputer trainer. The program (written in 6800 assembly language) assumes the availability of 340 bytes of memory for program storage, so an ETA-3400 memory-expansion module must be installed.

New from HIPLØT™

6-pen plotting for as little as \$1480*.

FCC class B tested.
UL listed.

the Houston way

And you can retrofit your present single pen HIPLØT for only \$395.

The new HIPLØT DMP Series 6-pen option makes high performance multi-pen plotting affordable. It's available on all six models in the HIPLØT family so you can enjoy the advantages of multi-colored plots on surfaces of 8½" × 11" (DIN A4) or 11" × 17" (DIN A3). Of course, you also get the standard HIPLØT range of capabilities such as intelligence, controls, interfaces and resolutions. There's a model for virtually every plotting application.

Big Performance in a Small Plotter

Since its introduction, the HIPLØT DMP Series has been recognized as the innovative plotter

line which made low-cost, high performance digital plotting a reality.

Now, with our new 6-pen option, there's an exciting new dimension in the DMP Series' versatility. Imagine two standard models with RS-232-C and parallel interfaces, four intelligent models with RS-232-C or Centronics® compatible interfaces, a choice of controls, resolutions, and pen speeds. Add to this the ability to plot with 6-pens on paper, vellum or mylar (ideal for overhead projectors) and you have the ultimate plotter price/performance combination — the perfect choice for the user or OEM.

Easily Retrofitted to Existing HIPLØT Models

If you already have a single pen DMP-2, 3 or 4, don't despair. For as little as \$395* you can upgrade these models with our 6-pen conversion kit. It's simple to do . . . and the complete change can be made by the user in only six minutes.

So why wait? Let us send you complete information on this breakthrough in affordable, multi-pen plotting. Contact Houston Instrument, One Houston Square, Austin, Texas 78753. (512) 837-2820. For rush literature requests, outside Texas, call toll free 1-800-531-5205. For technical information ask for operator #5. In Europe contact Houston Instrument, Rochesterlaan 6, 8240 Gistel, Belgium. NEW STATE-OF-THE-ART SS16K/IEEE 16K STATIC RAM BOARD ONLY \$179⁹⁵

Expand your system beyond
64K — add universal bank
select option for only \$20.00

New: SS16K/IEEE RAM

It's everything you need in a 16K static RAM board — at the lowest price you've ever seen. The SS16K/IEEE comes with all the high performance features listed below. And unlike obsolete-design RAM's (without bank select) you can add-on our universal software bank-selector system anytime, now just \$20.00. This makes the SS16K/IEEE capable of addressing 2,048 different banks. You can add memory beyond the 64K limit. You can expand to a multi-terminal system.

FEATURES OF SS16K/IEEE :

- Low-power 2114's
- All inputs and outputs meet the proposed IEEE standards for the S100 bus.
- 4.0 MHz operation.
- Schmitt trigger buffer on all signals for maximum noise reduction.
- Addressable on 16K boundaries, 0-64K, dip switch selectable.
- Phantom option, dip switch selectable.
- PWR/MWRITE option, dip switch selectable.
- Glass epoxy PC board with gold-plated contacts and double-sided solder mask.
- Fully socketed.
- Four separate regulators, for maximum stability.

WITH BANK SELECT OPTION (now just \$20.00)

YOU ADD THIS:

- Software bank selector featuring a universal decoder works with Cromenco, Alpha Micro, Netronics, most other systems, or your design. On-board dip switches: Bank Select Enable, Reset Enable, Reset Disable, Port Address, Port Data.
- LED Indicator to display status.

10-DAY MONEY-BACK TRIAL: Try a fully wired and tested board for 10 days — then either keep it, return it for kit, or simply return it in working condition.

SAVE \$50

We design and manufacture a complete line of industry compatible microcomputer assembled and tested boards and kits for your system. All are S-100 bus compatible and use the Z-80 microprocessor.

With over 25,000 boards and hundreds of computer systems installed throughout the world, SD Systems offers you both proven and state-of-the-art products! We provide you with a complete family of kits for all your systems needs —

SBC 100/200 — A 2.5/4 megahertz range of single board computers which are effective standing alone or combined with the complete SD board range.

ExpandoRAM I/II — For use with 250/200 nanosecond RAM, these high density boards offer 16 to 64K memory; the ExpandoRAM II can achieve RAM capacities up to 256K using 64K chips.

Versafloppy I/II — A floppy disk controller for up to four drives, supporting single/double density and single/double-sided disk formats.

VDB-8024 — A full function visual display board with a Z-80 controller that adds display capabilities to your system.

Z-80 Starter Kit — A low-cost entry into the world of microcomputers designed primarily for education and experimentation.

Prom 100 — A specialty board of SD Systems which allows you to program 2708/2716/2732 proms.

for S100, Elf II, Apple, TRS-80 Level II*

From \$99.95 kit

Now — teach your computer to talk, dramatically increasing the interaction between you and your machine.

That's right: the **ELECTRIC MOUTH** actually lets your computer talk! Installed and on-line in just minutes, it's ready for spoken-language use in office, business, industrial and commercial applications, in games, special projects, R&D, education, security devices — there's no end to the **ELECTRIC MOUTH's** usefulness. Look at these features:

- ★ Supplied with 143 words/letters/ phonemes/ numbers, capable of producing hundreds of words and phrases.
- ★ Expandable on-board up to thousands of words and phrases (just add additional speech ROMs as they become available).
- ★ Four models, which plug directly into S100, Apple, Elf II and TRS-80 Level II computers.
- ★ Get it to talk by using either Basic or machine language (very easy to use, complete instructions with examples included).
- ★ Uses National Semiconductor's "Digitalker" system.
- ★ Includes on-board audio amplifier and speaker, with provisions for external speakers and amplifier.
- ★ Adds a new dimension and excitement to programming: lets you modify existing programs and games to add spoken announcements of results, warnings, etc.
- ★ Installs in just minutes.

Principle of Operation: The ELECTRIC MOUTH stores words in their digital equivalents in ROMs. When words, phrases, and phonemes are desired, they are simply called for by your program and then synthesized into speech. The ELECTRIC MOUTH system requires none of your valuable memory space except for a few addresses if used in memory mapped mode. In most cases, output ports (user selectable) are used.

Westico-The Software Express Service that really delivers.

The professional wants good software, wants it fast and backed by expert service — There's one answer — Westico, the Software Express Service that really delivers...

Call (203) 853-6880 for overnight delivery or... when you need expert service.

— Quality Software!

Westico constantly improves its quality software in a wide range of categories including: Accounting, Professional Time Accounting, Text Processing, Planning and Analysis, Telecommunications, Data Management, Development Tools, Language Processors.

— Your Program Overnight!

Westico knows that the speed in which you receive a program is often a key consideration in your selection. That's why Westico is the only software company to offer overnight delivery.

— Our 24-Hour Computer Hotline!

For detailed program information or for quick access ordering, just dial-up the Westico computer (300 baud) (203) 853-0816.

— The Software for a wide variety of CP/M™ and other computer systems:

TRS-80 Model II, Apple, Vector Graphic, iCom, Cromemco, North Star, Micropolis, Ohio Scientific, Altos, Dynabyte, SuperBrain and more.

— Professional Service

Westico is staffed by experts who understand your software and the equipment on which it runs. It's nice to know when you need service or advice, a Westico expert is standing by.

Send for our **NEW FREE** Catalog.

— Professional Software

Current Westico products with **new prices** for complete systems and documentation alone:

New from Westico

LYNX a friendly overlay linker.

LYNX is an overlay linker for creating executable programs from relocatable files produced by Microsoft's FORTRAN, COBOL, and MACRO-80 languages.

LYNX allows the construction of programs that use all available memory including that used by LYNX itself. Maximum size programs under Microsoft's L80 linker can be increased at least 9K using LYNX without overlays.

The overlay capability of LYNX is vital for programs larger than available memory. With overlays, many large programs on minicomputers or large mainframe computers can be easily moved to a microcomputer.

LYNX offers many features not found in L80. For example, LYNX can be told to get commands from a disk file. The "HELP" feature displays a complete list of LYNX commands. Mapping information can be sent to the screen, printer or disk files. LYNX can decode Microsoft REL files for inspection.

LYNX uses overlays in a tree structure. Any routine is available to any overlay that is higher on the branch than the routine itself.

Complete system with documentation \$250. Documentation alone \$25.

4 WAYS TO ORDER

- Write Westico, Inc., 25 Van Zant Street, Norwalk, CT 06855.
- Call (203) 853-6880.
- Telex 643-788.
- Dial-up our 24-hour computer (300 baud) (203) 853-0816.

MasterCard and VISA accepted.

Prices do not include shipping and are subject to change. In CT add 7½% sales tax.

Manual price may be credited toward purchase of software.

Dealer inquiries invited.

XASMF8.....F8/3870
XASM400.....COPS400

Assemblers....\$200.00 each
Manual only....\$25.00

8048 DEVELOPMENT PACKAGE

Now you can use the 8048 family of single-chip microcomputers without buying expensive equipment. Develop 8048 software with the XASM48 cross-assembler. Then plug our EPR-48 board into your S-100 system to program the 8748 EPROM version. (Similar packages for 8051 and TMS9940E coming soon.)

8048 Development Package...\$574.00
EPR-48 alone.....\$449.00

PROM EMULATOR BOARD

Debug dedicated systems quickly. Our PSB-100 PROM Emulator is an S-100 board with up to 8K of RAM. Cable with 24-pin plug replaces PROM(s) in your target system for instant program testing.

PSB-100 PROM Emulator..\$445.00 w/
2K RAM

C ~~AND~~ Pascal

Efficiency ~~AND~~ Portability

Flexibility ~~AND~~ Strong Typing

Now you don't have to compromise!

Whitesmiths Ltd. now offers portable language development systems for four families of computers. Approximately one thousand installations use our software.

We support complete versions of both C and Pascal, as compilers and cross-compilers. You get C automatically when you license Pascal, and you get native support with each cross-compiler. Test the software on your VAX before burning PROMs for your 68000 or 8080.

Whitesmiths Ltd. offers a variety of licensing arrangements, the simplest being a binary license for use on a single CPU. The full source code is available with internal documentation. Maintenance, training and sublicensing rights may also be obtained.

Call or write for more information.

The next generation of business software

If you are still searching for quality software for your small business computer, search no more. *Designer Software™* is pleased to announce *PHOENIX™*, the first line of microcomputer software to include professional word processing and general accounting.

WORD PROCESSING

We know word processing. A year-and-a-half ago the owners of *Designer Software™* wrote a well-known word processor for another company. In the last 18 months we've learned about other features you want in a word processing package. *PHOENIX™* Word Processing reflects our experience. It is more powerful and flexible than other word processing packages you can buy. And since we designed "human engineering" into *PHOENIX™* Word Processing from the beginning, it can compete, feature for feature, with expensive dedicated word processors.

Many people have remarked that the user's manual we wrote earlier was the best ever for microcomputer software. Even so, we felt that we could have made it more accessible to the non-technical user. With *PHOENIX™* Word Processing we have a separate Training Manual with beginning, intermediate and advanced levels. By allowing you to work at your own level, we have made the learning process easier and less intimidating.

ACCOUNTING

All five *PHOENIX™* general accounting packages (General Ledger, Accounts Receivable and Payable, Payroll and Inventory) were designed by CPA's based on similar packages from mini and mainframe computers. The programs are COBOL with an integral

assembly-language data base. They are fully integrated to allow automated posting to the General Ledger. An internal screen handler permits full-screen data entry for speed and ease of use. Although we made cosmetic enhancements prior to distribution, the basic programs have been user-tested for at least eighteen months.

PHOENIX™ Accounting also includes a growing number of specific application packages. We have completed or scheduled for completion Fixed Assets, Tenant Processing, Mail Management, Financial Projections and Time/Billing. Each package stands alone, but many also work in conjunction with other *PHOENIX™* packages. For example, *PHOENIX™* Mail Management will work very well by itself, but we also designed it to fit in easily with the merging capabilities of *PHOENIX™* Word Processing.

With *PHOENIX™* Accounting we have, as always, given special attention to documentation. Not being content to describe which buttons to push, we have taken the time to explain the accounting principles behind the programs and how each package fits into an automated office. To this end we created the fictional town of Smallville with a fictional company, Moustache Manufacturing. By seeing how Mr. Small and his employees use *PHOENIX™* Accounting at 2M, you learn to apply it to your office as well. The Smallville sections are amusing as well as informative, and you will likely read the manual just to find out what Sidney, Mr. Small's incompetent brother-in-law, will do next.

Designer Software™

HOUSTON

If you want to know what *PHOENIX™* Word Processing and accounting can do for your business, call, write, telex or use *The Source* to request more information.

The demonstration program was used to time the motion of two colliding air cars on a linear air track. [This apparatus is a cousin to an air-hockey table....RSS] Each timer was

sistor. With timers 1 and 2 operating in the pulse-width-comparison mode, the microcomputer measured how long each phototransistor was blocked as the cars approached and then recoiled from the collision. These measured times, the known lengths of the opaque vanes, and the cars' masses were then used to calculate momenta before and after the collision.

I required that each timer be able to record three elapsed times. Each timer therefore has three memory locations reserved for saving its measurements. Labeled T11 thru T23 in the demonstration program, these memory locations are accessed during readout as times A, B, and C for timer 1 and times D, E, and F for timer 2.

The trainer's six 7-segment LEDs (light-emitting diodes) are used for data display. Each experimental trial begins with the LEDs dark. The 7-segment LEDs then light individually to show letter labels of the elapsed times as they are measured (see photos 3 and 4). When the experimental trial ends, each of the keys A thru F, when pushed, will produce a display of the corresponding elapsed time (see photo 5). Pushing the zero key clears all six memory locations to prepare for another trial.

Although the demonstration program specifies operation of timers 1 and 2 in the pulse-width-comparison mode, it will just as easily support their operation in the frequency-comparison mode. To make the conversion, simply change the number stored at hexadecimal location 010D from hexadecimal 59 (for pulse-width-comparison mode) to hexadecimal 49 (for frequency-comparison mode).

This computer-based timer has been a stable and dependable measurement tool in my introductory physics laboratory. The students enjoy using it and appreciate the repeatability of results attained with it. I hope that you too will find it useful, and I would be interested to hear from readers who develop their own applications. ■

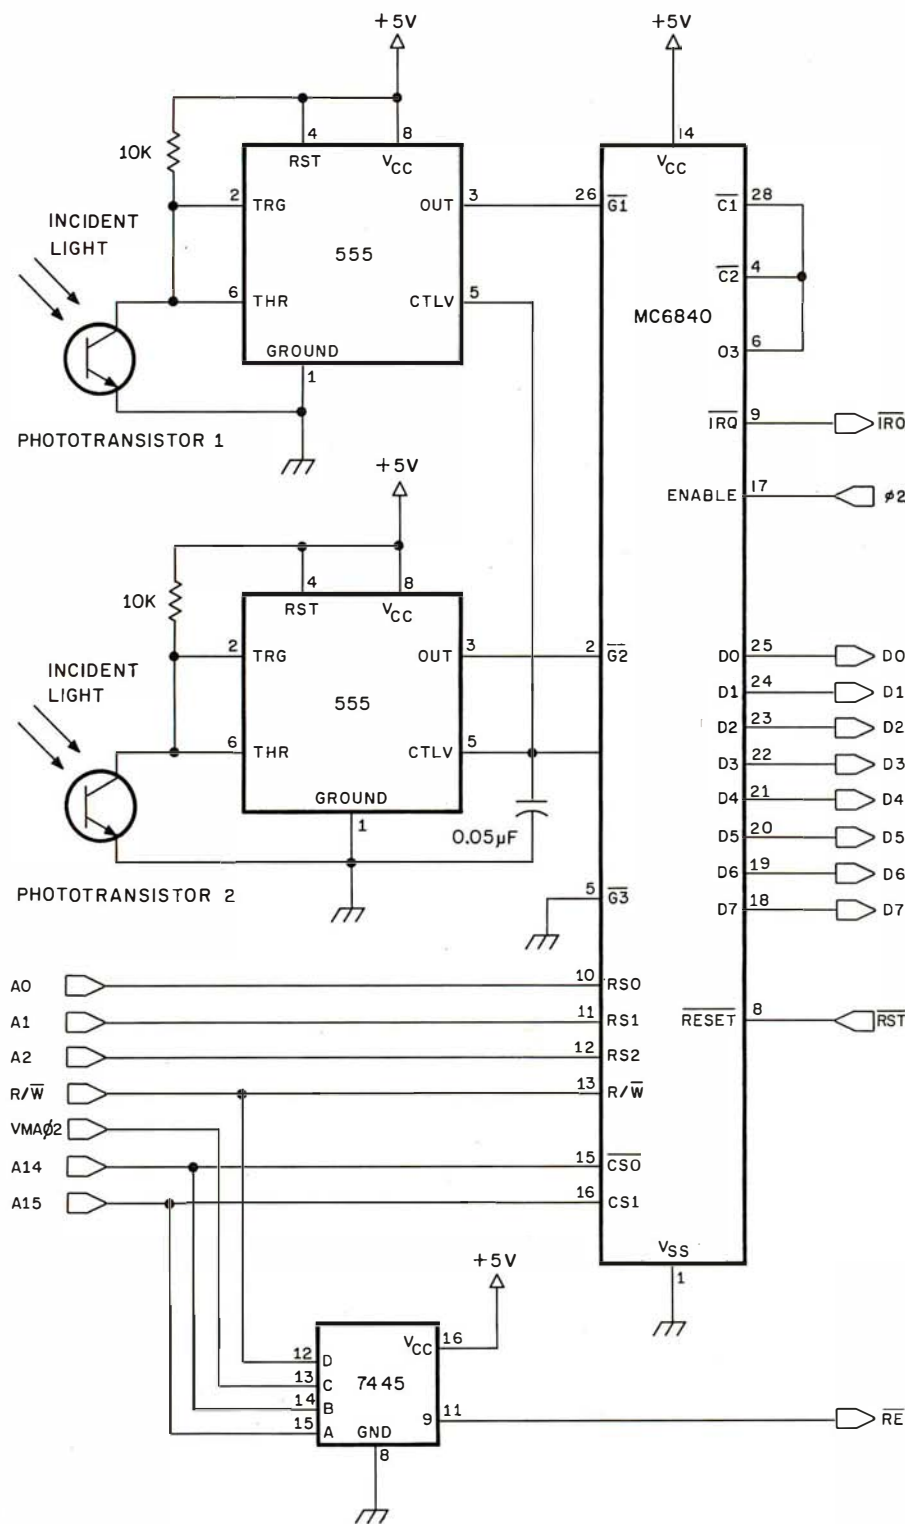

Figure 6: A complete circuit schematic diagram for the two-channel, data-logging, millisecond timer. This is designed to work with the Heath ET-3400 microprocessor trainer.

MULTIPROCESSOR**

ACTION COMPUTER ENTERPRISE, Inc. Pasadena, California

POWER

THE DISCOVERY MULTIPROCESSOR

The dedicated power of this complete single board computer is provided to each user, making the DISCOVERY MULTIPROCESSOR unique among multi-user systems. With the power and expandability of distributed processing • With the economy of shared peripherals • With the flexibility of shared and public files • And all of this with full CP/M* and S-100 compatibility.

Multiprocessing Software Multiprocessing Hardware

Our Distributed Processing Operating System, **dpc/os**®, resides in the Service Processor, establishing a CP/M environment for each user and managing access to the shared system resources. Multiuser facilities are provided for print spooling, for interprocessor communication and for private, public and shared-update files. Several processors can be employed concurrently by a single user via the enhanced batch submit facilities. And with **DISCOVERY** all CP/M compatible programs will execute without modification, thus protecting your software investment.

The ACE 64K Distributed Processing Single Board Computer, the **dpc-180**™ gives the **DISCOVERY** MULTIPROCESSOR its own unique architecture. One DPC is dedicated to each user providing exclusive use of the onboard Z-80, 64K ram and serial I/O. Access to the shared resources is provided by an expanded DPC used as a Service Processor. Additional users can be added at any time by simply inserting additional DPC's into the standard S-100 bus — up to a total of sixteen user processors in a single chassis!

*CP/M is a registered TM of Digital Research, Inc.

DISCOVERY has been proven in installations throughout the World. If you need the Power of Multiprocessing ... it's time you discovered us!

The ACE **DISCOVERY MULTIPROCESSOR** dedicates a complete 64K Z-80 Distributed Processing single board Computer, the **dpc-180**™ to each user. An expanded DPC coordinates all of the system activities.

Multiuser mainframes with 192K ram start at under \$6000. The 64K **dpc-180**™ is priced at \$1395. Immediate delivery. A complete line of standard peripherals including a 26M byte hard disk subsystem can be supplied on request. Dealer and OEM inquiries are invited.

Microcomputers in Education: A Concept-Oriented Approach

George Wolfe, James Madison University
Harrisonburg VA 22807

In the wake of new technologies, there generally comes an abundance of dreams and possibilities. Inherent in these possibilities is the seed of some new transformation of great or modest proportion. Such a transformation first occurs externally, manifesting itself in the conveniences or specialized abilities the new technology offers. But soon it touches us subjectively and we find ourselves perceiving reality differently. We construct new paradigms to help us understand our changed relationship with the world, and structure new vocabularies of experience.

Familiar examples of such technologies surround us—the electric light bulb, radio and television, satellite communication, medical technology, and nuclear energy. Each of these has altered our way of life to such an extent that any citizen of our culture from a century ago could not have entertained the world view we, by nature, have today. But, the technology that possesses the greatest potential to transform society and human life is just now entering the home: the microcomputer. Unlike some previous technological advances, the computer is not merely a specialized device fulfilling a specialized function. The convenience it provides is less tangible than bringing light into the home or Broadway entertainment into the living room. The computer's role and potential are much more abstract and profound. The new promise it offers is that of AI (artificial intelligence), which we not

only create, but also, via the computer, communicate and interact with.

One of the most constructive fields to apply AI (to capitalize on its capacity to transform) is education. Various applications of microcomputers are already in the classroom and their effect has been found to be highly reinforcing to the learning process. These applications can be placed into the following categories:

- cataloging and processing of information
- learning to program a computer
- using the computer as an instructional tool; ie: CAI (computer-aided instruction)

The first two categories are self-explanatory and may even be somewhat familiar. There is no doubt that the computer can greatly increase the efficiency of a system through data processing, and that skill in computer programming is a growing necessity in our society. The third category may be somewhat less known, but clearly it is growing in use. It involves using computer programs designed to supplement students' assignments in the classroom. Such programs are usually in the form of drills, information exercises, or educational games. They often provide students with a moderate degree of interaction with the computer.

CAI has been defined in various ways and various opinions have been expressed as to its effectiveness. Certainly the value and success of CAI lies in the creative design of the programs and the appropriate setting for their use. Unfortunately, many teachers seem to view CAI as merely an automated drill instructor. Indeed, there is some value in having the computer play this role—it can hold pupils' attention and effectively reinforce their learning. Also, students learn to operate a computer long before any formal programming skill is acquired. But there is one application of CAI which as yet is relatively

About the Author

George Wolfe is a music graduate of Indiana University and has been teaching at James Madison University for the past three years. He is a member of the Association for Integrative Studies and has been privately researching integrative education and the role of the microcomputer in the classroom. Mr Wolfe has also been developing integrative arts related television programs on a grant from the School of Fine Arts and Communications at James Madison University.

SUPERBRAIN® & COMPUSTAR™ USERS' GROUP

JOIN SUPER★STAR INTERNATIONAL FOR THE REGULAR YEARLY MEMBERSHIP FEE AND RECEIVE A FREE DISKETTE WITH THE FOLLOWING PROGRAMS:

- ★ "RECOVER", it allows you to recover an erased program.
- ★ "AUTO LOAD", it enables you to load and run a program automatically.
- ★ "RETURN", it gets you back into a crashed program from CP/M.
- ★ the game "OTHELLO".

Since our first ad in March 1981, we have been contacted from as far away as South America, Europe, Australia, and Indonesia. Super★Star International is becoming a world-wide family whose members will enjoy the benefits of a wide range of hardware and software developments.

Our full color, monthly magazine will print a free program in every issue—programs like an appointment calendar and personal finance record keeping. You'll also find technical information, tips for beginners, special business uses, equipment reviews, and the Intertec Story—the people, ideas, and machines behind your computer.

WE GIVE YOU VALUE! Purchase just one commercial program and you will save more than the price of our membership fee. Rent a car or stay in a hotel offered in our discount program and save even more, not to mention insurance discounts, a market place for your personal software, and a shoulder to lean on if something isn't working quite right.

Super★Star International—with savings, service, and efficiency—we're here to win your heart.

WE NOW OFFER A WIDE RANGE OF PRODUCTS

A few may still be under development at the date of this issue.

SOFTWARE

- ★ DIAGNOSTICS—for the CPU, Memory, Disk Drives and more
- ★ WORD PROCESSING—WordStar¹, MailMerge², WordMaster³, Magic Wand⁴
- ★ LANGUAGES—COBOL, FORTRAN, Pascal, FORTH, BASCOM Compiler⁵
- ★ UTILITIES—Assemblers, Disassemblers, Monitor
- ★ GAMES—Chess, Adventure, Star Trek, Analiza⁶, and more

- ★ BUSINESS—Real Estate Acquisition Package; Systems Plus⁷, Peachtree⁸, and other Accounting Packages; Plus the most powerful, easy to use business package, which automatically updates all information at the point of entry; SuperSort⁹, DataStar⁹, dBASE II⁹, FMS-80⁹

HARDWARE

- ★ S-100 Adaptor
- ★ External Controls
- ★ Add-on Disk Storage

ENHANCEMENTS

- ★ Upgrades for ALL SuperBrains
- ★ SuperDOS (Fantastic!)
- ★ Add-on character sets—including graphics
- ★ MTT Upgrade for the Intertube

REQUEST™

U.S.A. BEATS I.B.M. TO MARKET WITH TRUE RELATIONAL DATA BASE!

On Feb. 1, 1981, I.B.M. announced a relational data base for 370/3033 users... U.S.A. introduced REQUEST™ 3 months earlier for the APPLE & PET!

DATA BASES ARE A DIME A DOZEN!

Flip through any computer magazine and one company after another will promise you that their product is the ultimate in data base programs.

WE DON'T TAKE THEIR WORD FOR IT!

A recent ad for data base management even provided it's own comparison checklist to prove that their data base surpassed all other data bases on the market today.

"COMPARE...DON'T TAKE OUR WORD FOR IT," THEY SAID.

WE DID
COMPARE

21

UNTIL TODAY THERE WERE MORE THAN 20 DATA BASE MANAGERS FOR THE APPLE II.
NOW THERE'S ONLY ONE!

REQUEST

THE APPLE DATA BASE MANAGER YOU'VE BEEN WAITING FOR!

If you want an easy-to-use, flexible, and versatile data base manager, you have a choice of one. DB MASTER from Stoneware Microcomputer Products - soon to become the standard by which all others will be judged.

But don't just take our word for it. Compare the many advanced features of DB MASTER with the data base manager you're now using. Or for that matter, compare it with any data base manager on the market. No one will even come close.

FEATURES		DB MASTER	REQUEST	REPORT GENERATOR
FILING SYSTEM:				
Maximum search time to find any record by its primary key	UNDER 3 SECS.	under 1 sec.	Yes	Yes
True ISAM file system with multi-field primary keys	YES	Yes	Yes(16)	Yes
Multiple secondary keys for rapid access (5-7 seconds) to records by any field	YES	Yes (approx 1 sec)	Yes(99)	Yes
Primary & Secondary keys maintained automatically—no need to rebuild keys after adding records	YES	Yes	Yes(16)	Yes
Maximum record size (bytes)	1020	4064	999	100
Maximum number of fields/record	100	999	Yes	Yes
Handles files with more than one diskette of data	YES	Yes	Yes	Yes
Custom disk operating system (DOS) for faster data retrieval and program chaining	YES	No	Yes(16)	Yes
User-designed screen formats	YES	No	Yes(15)	Yes
Up to 9 screen "pages" per record	YES	Yes(16)	Yes	Yes
Ten field types, including dollar/cents, phone & social security number, date, etc.	YES	Yes(15)	Yes	Yes
Automatic data compaction for increased disk storage capacity.	YES	Yes	Yes	Yes
Wild card, partial string, range and Boolean search capabilities	YES	Yes	Yes	Yes
Dynamic prompting (tm) - lists all available functions on screen—no need for quick reference card.	YES	Yes	Yes	Yes
Password file protection	YES	Yes	Yes	Yes
Four function calculator mode	YES	Yes	Yes	Yes
Daily update lists for printout of all records added/edited on any day or range of dates	YES	Yes	Yes	Yes

While a custom DOS is nice for speed, it does place the user in a bind, since it makes the data incompatible with APPLE'S DOS & other software. REQUEST™ is fully compatible!

REQUEST™ utilizes a sophisticated screen generation algorithm to produce screens pleasing to the eye and easy to use, AUTOMATICALLY.

REQUEST'S™ additional search functions include:

- context search
- arithmetic expression evaluation search
- multi-field relational search

AND REQUEST™ GIVES YOU ALL THESE EXTRAS

- Multiple formats for mailing labels
- REQUEST™ can be used with a modem
- On the APPLE™ REQUEST™ is compatible with 80 column boards
- High level query language or screens used to form query
- Query library stores executive queries for Run-On-Demand
- REQUEST™ will interface with Source™, VisiCalc™, and word processing packages
- Disks are readable and copyable by normal DOS

ONLY \$225

THINKER™

THE INTELLIGENT ACCOUNTING SYSTEM

THINKER™ & REQUEST™ CAN BE USED
SEPARATELY OR TOGETHER AND
DATA MAY BE INTERCHANGED.

THINKER'S™ ADDITIONAL FEATURES INCLUDE —

- Compatible with REQUEST™
- Customized access to THINKER™ data via REQUEST™
- Relational analysis of THINKER™ data via REQUEST™
- Utilizes a 9 digit ZIP Code compatible with Canada & Europe
- Password protection for system security
- Daily audit trails for system integrity
- Dynamic system configurator will expand data to additional drives when needed, AUTOMATICALLY!
- Employs industrial psychological approach to achieve superior human engineering.

SOFTWARE THAT THINKS FOR ITSELF

Before The **THINKER™**, microcomputer business systems have fallen short in two distinct areas: *FLEXIBILITY* and *INTEGRATION*. Every business is different and requires software to be pre-set to fit its own particular needs. A nip here, a tuck there, and files are extended to where the business was expected to be. . . But, a single file too short can cause the system to fail, or a single file too long wastes costly disk space. The **THINKER™** takes the guess work out of your business data processing by thinking for you.

EASY TO USE—FULLY INTEGRATED ACCOUNTING SYSTEM

The **THINKER™** consists of 6 comprehensive *interactive* modules, with all transactions applied immediately and the results are instantaneously accessible. They are;

- ACCOUNTS RECEIVABLE • ACCOUNTS PAYABLE
 - SALES ORDER ENTRY • PURCHASE ORDER ENTRY
 - INVENTORY CONTROL • MAILING LIST
- (General Ledger available in June)

FLEXIBILITY— SOFTWARE THAT GROWS WITH YOUR BUSINESS

The **THINKER™** utilizes the **DYNAFILE™** *Keyed File Allocation Scheme* which dynamically manages file length and records to meet the businessman's needs and will automatically extend itself to work on hard disks without any program modification. No disk space is wasted because the system automatically recaptures space when records are deleted. **DYNAFILE™** utilizes a sophisticated indexing scheme, allowing direct access to any record. Machine language programming insures **DYNAFILE™** speed, reliability, and integrity.

The **THINKER™** is currently available for 6502 based
microcomputers. 80 column PET/CBM Computers
80 column Apple Computers

Education Forum

unexplored. This is the use of the microcomputer to aid students in developing the ability to conceptualize. It is my belief that the transforming value of the microcomputer will be most fully realized through a concept-oriented approach to computer-aided instruction. The purpose of this article is to awaken educators to the solutions concept-oriented computer instruction offers our educational system.

Artificial Intelligence and Specialization

Inherent in the growth of technology is the need for specialization. New information and research, vocational training, and industrial development must accompany advancing technologies. Along with these also comes the expertise necessary to maintain that growth. With the surge of technological and industrial growth in the twentieth century modern education has shifted away from the liberal arts toward pragmatism and specialization. As this trend has increased the classical ideal of a liberal arts education has fallen by the wayside. (See reference 2, page 407.)

While certainly necessary in a technological society, there is a danger which emerges if specialization is carried too far. This danger is dependence and the loss of comprehensive viewpoints. We have seen how a technological society can become dangerously dependent on foreign energy sources needed to drive that society and maintain its standard of living. We have also witnessed how the interaction among nations, motivated by their own individual interests, demands a perspective in world leaders that must be holistic if a stable peace is going to be achieved and sustained. Thus, the many specialized technologies that have brought nations closer together and made them dependent on one another have ironically recreated the need for the Integrated Person; someone who is able to recognize and effectively apply fundamental concepts to numerous, rapidly changing, and adaptively taxing circumstances. Such an individual must necessarily possess a more comprehensive understanding of the various academic disciplines, so that he or she can make decisions that are universally beneficial.

The common belief among educators today is that this ideal is impossible to achieve. It certainly appears that way when we examine the flood of information present within every discipline. Education, in keeping pace with technology, has become so oriented toward information gathering and retention that the conceptual links among

Education Forum is an occasional feature in **BYTE** intended to foster debate about the uses of personal computers in the schools and colleges. We encourage reader participation. Contributors should supply their full names and addresses for publication, along with their telephone numbers, which will not be published.

Say Ahh...

Our New grafixPLUS™ 80-column printer opens wide for easy servicing.

Introducing the newest members of our grafixPLUS™ family—the DP-9000 Series 80/132 column printers—built on the same tradition of quality printout, solid design and low cost of ownership established by our 132/220 column DP-9500 Series.

A Case for Serviceability

Not that it comes up often, but want to get inside? Simple. Just remove a few screws and the clam-shell case swings open exposing all major components. This easy access plus built-in self-test and minimum component count yields an MTTR of one-half hour. The 9-wire print head replacement's even simpler... two screws and it's out. Without opening the case. And without a service call.

Performance Plus

The DP-9000 Series prints the full ASCII 96 character set, including descenders and underlining, bi-directionally, at up to 200 CPS. Number of columns can go up to 80 or 132, depending on character density—switch or data source selectable from 10 to 16.7 characters per inch. And all characters can be printed double width. The print head produces razor-sharp characters and high-density graphics with dot resolutions of 72X75 dots/inch under direct data source control.

Interface Flexibility

The three ASCII compatible interfaces (parallel, RS-232-C and current loop) are standard, so connecting your computer is usually a matter of plug-

it-in and print. Also standard are: a sophisticated communications interface for printer control and full point-to-point communications, DEC PROTOCOL, and a 700 character FIFO buffer. An additional 2K buffer is optional.

When you're ready for a printer (or several thousand), look into the grafixPLUS DP-9000 Series from Anadex—you'll find an open and shut case for quality. Contact us today for details, discounts and demonstrations.

LISP

for TRS-80 Models I & III

SuperSoft LISP allows the TRS-80 to become a complete Artificial Intelligence laboratory! It is the tool that takes you to the frontier of Computer Science.

The SuperSoft LISP is a *complete and full* implementation. (It is NOT a subset!) It contains an efficient garbage collector which optimizes the usage of user RAM, and supports the TRS-80 graphics. Below are some features:

- Runs in 16k level II (with only 6K overhead)
- Fully implements atom property list structure.
- PROG is supported.
- FUNARG device is implemented.
- Efficient garbage collection.
- Complete with LISP editor and trace.
- Allows complete range of single precision numeric data.
- Works with old as well as new ROMs.
- Contains 97 functions.
- Sample Programs.

The LISP package is supplied on tape or discette and with a complete user manual.

cassette version: \$75.00
(requires 16K level II)

Disk version: \$100.00
(requires 16K disk)

(manual only: \$15.00)

Education Forum

the academic disciplines have been all but lost. The advent of artificial intelligence has the potential to change this, because computer technology provides a means through which information within all disciplines can be effectively handled, processed, and made available. It turns out that mechanical brains manage information better than human brains (ie: a computer's memory and processing capabilities are in many ways superior in efficiency and organization to our own). Thus, the availability of information can be increased in quantity and reliability with microcomputers in the learning environment. The preoccupation of education with information can now be relieved somewhat. Rather than gearing students primarily for absorbing and retaining data, their attention can be directed toward the abilities to conceptualize, abstract, and apply available information creatively. These higher abilities remain uniquely human. We should no longer neglect their formal development for the sake of having students retain enormous amounts of information.

A movement in American education dedicated to promoting a concept-oriented approach to teaching began several decades ago with a small circle of scientists, most of whom had been strongly influenced by general systems theory. Among this group's members were Henry Margenau of Yale University and author-scientist Ervin Laszlo. Their efforts enjoyed a brief period of international recognition during the 1950s and 1960s under the auspices of the Center for Integrative Education. (See reference 1, pages v thru vii.) Their ideas have never been fully realized in the American classroom, but the microcomputer now makes the fulfillment of their approach a definite possibility. The computer is certainly the catalyst through which the integration of knowledge can be achieved in modern education and the direction of teaching changed to include principles and fundamental concepts, as well as specialized information.

Fundamentals of an Integrative Approach

The first and foremost demand of concept-oriented education is the development of thinking skills. Today, we devote much time to cultivating reading and mathematical skills, artistic abilities, and other talents in our students. But we tend to ignore the abilities to think rationally, evaluate circumstances and information accurately, and integrate two or more disciplinary perspectives. As a result, high school and college students often lack the intellectual faculties needed to grasp issues in a sharp and accurate focus.

As with other abilities, developing thinking skills takes practice, something teachers do not always have the time and understanding to offer. Properly structured and applied computer programs, however, can provide the time and mental exercise needed to sharpen students' reasoning faculties.

Education Forum

It is possible, for example, to develop a series of logic programs ranging in difficulty from simple reasoning using concrete ideas, to complex reasoning employing abstract ideas. The relationship between logical and mathematical proof can also be incorporated into such programs. The format could be a kind of logical dialogue between student and computer. For example,

Computer: What do you say to us having a philosophical discussion? I'll start by making a simple statement, and you tell me if you think it is true or false.

"Seeing is believing."

Student: True.

Computer: I take it then, that if you see something, you believe it to be really happening or really there. Is this correct?

Student: Yes.

Computer: OK. So far you are thinking very logically. But now, let me ask you another question.

"Have you ever seen the sun rising in the morning sky?"

Student: Yes.

Computer: Do you know that the sun is not actually rising in the sky? What is actually happening is that the Earth is revolving on its axis, and in doing so, creates the illusion that the sun is moving upward. Now that I have pointed this out, do you still believe the sun is really rising in the sky?

Student: No.

Computer: But do you still see the sun rising in the morning sky?

Student: Yes.

Computer: Well then, you have to reconsider my original statement which was "seeing is believing." You said that this was a true statement, yet you just admitted that even though you have seen the sun rise in the morning sky, it is not really rising. Do you still think that in all cases "seeing is believing."

Student: No.

Computer: Very good! We simply have to recognize that illusions do exist and that seeing something does not always mean that what we are seeing is really happening or really there.... Now consider this next statement.

"The sun appears to be rising in the sky." Is this statement true or false?

Student: True.

Computer: Correct. The word "appears" is what makes the statement true because it suggests that the rising sun is indeed an illusion.

ALL THE PROGRAMS YOU'LL EVER NEED. FOR \$600.

Say goodbye to the costs and frustrations associated with writing software: The Last One® will be available very soon.

More comprehensive and advanced than anything else in existence, The Last One® is a computer program that writes computer programs. Programs that work first time, every time.

By asking you questions in *genuinely* plain English about what you want your program to do, The Last One® uses those answers to generate a totally bug-free program in BASIC, ready to put to immediate use.

What's more, with The Last One®, you can change or modify your programs as often as you wish. Without effort, fuss or any additional cost. So as your requirements change, your programs can too.

In fact, it's the end of programming as you know it.

And if, because of the difficulties and costs of buying, writing and customising software, you've put off purchasing a computer system up to now, you need delay no longer.

The Last One® will be available very soon from better computer outlets. To place your order, take this ad into your local dealer and ask him for further details. Or in case of difficulty, please write to us direct.

THE LAST ONE®

YOU'LL NEVER NEED BUY ANOTHER PROGRAM.

We've lowered the

No, the low CompuServe \$5.00 per hour charge hasn't changed, but the world of information we offer is growing steadily.

Of CompuServe's 22 large computer systems, 10 are housed here in our Dublin, Ohio Computer Center.

More Computer Power

The number of CompuServe customers keeps growing — now more than 8,000 strong. The more customers we have, the more computer power and access lines we dedicate to our Information Service. Our 22 mainframe computer systems provide sufficient power and capacity to serve thousands more.

More News

In addition to the Associated Press, we've added more news. Read The New York Times and all the news that's fit to print, including Broadway show and movie reviews, stories from Pulitzer Prize-winning

writers and more. We are continually adding new features to the information service, so check our "What's New" section regularly to see what other information is available.

TRS-80™ Color Computer and Videotex™

The CompuServe Information Service is sold in Radio Shack® Stores and, in addition to all the major brands of computers and terminals, can be used with the new TRS-80 Color Computer and Videotex terminal. Our special software formats the information in easy-to-read pages. Go forward, backward, anywhere in the CompuServe Information Service databases — even directly to a page of information.

Big System Reliability

When we say we're reliable, we mean it. In fact CompuServe computers were up and running for a 99.6 percent reliability factor last year. We've also built in many "invisible" features like data error detection and retransmission — all those technical enhancements which add up to the CompuServe Information Service being ready to use when you're ready to use it.

Radio Shack, TRS-80 and Videotex are trademarks of Tandy Corporation. ATARI is a trademark of ATARI, Inc.

cost of the world.

Access to all the CompuServe services, including electronic mail; bulletin board; CB simulation; newsletters from Radio Shack®, Atari®, and others; up to 128K storage free plus all the services listed here are yours. Access time is only 8½ cents per minute between 6 PM and 5 AM weekdays and all day weekends, billed to your charge card. It's a local phone hook-up in more than 260 U.S. cities.

There's an energy management system, home repair tips, discount information, personal health information and more. Better Homes & Gardens provides household information such as recipes, nutritional analyses and meal plans.

All kinds of games (including some for the kids), book and movie reviews, astrology and the latest sporting event news — even point spreads and injury lists. There's the CompuServe line printer art gallery and even a national user opinion poll for instant feedback on current events.

A complete program. The AP financial wire, newspaper financial pages, Raylux Financial Advisory Service, the Commodity News Service and personal financial programs. At a slight additional charge, you can retrieve fundamental financial data on more than 1,700 companies from Value Line, and MicroQuote offers current and historical data and special market reports on more than 40,000 stocks, bonds and options, updated daily.

While the CompuServe Information Service is designed for everyone, MicroNET Personal Computing is for the knowledgeable computer hobbyist or business

person. You can buy software and have it downloaded directly to your person computer. Use programming languages such as *APL-SF*, *EXTENDED BASIC*, *MACRO-10*, *SNOBOL*, *EXTENDED FORTRAN* and *PASCAL*, use word processing and text editing programs.

Not 1985, NOW!

See for yourself what a state-of-the-art electronic information service can do. Get a demonstration at a Radio Shack® computer center or store — or write to us for further information.

Education Forum

Another series of programs can be composed to help students learn to discriminate between objectively, rationally, and intuitively derived conclusions. The aim is to develop discernment in the student and provide the time and practice necessary for one to become adept at applying such thinking skills.

Interdisciplinary perspectives can be the theme of still another thinking-model program. Here, the goal is to arrive at the most plausible explanation for something by considering information from various disciplines. For example, students examine explanations based on economic influences, historical factors, or any other perspectives that are appropriate to the subject being considered.

Such a program, in addition to the ones mentioned above, can be designed for educational levels ranging from junior high school through college. (Anyone interested in more information regarding the programs discussed in this article can write the author in care of the Music Department, James Madison University, Harrisonburg VA 22807.)

With thinking skills heightened, we are now ready to pursue the second most important aspect of integrative education, concept development. Concept development often utilizes basic rules and principles, many of which have several exceptions. The idea is for the students to find the exceptions and be able to adapt the principles to suit varying circumstances. To illustrate this, let us compare the steps of an information-oriented approach to a concept-oriented one.

The information-oriented approach is basically an inductive one. That is, we begin by giving out specific facts and data, then we draw conclusions, and finally derive our concepts. (Unfortunately, many teachers today never follow through to the final step of deriving the basic concept!) A concept-oriented approach is deductive rather than inductive. After prerequisite definitions are given, students are taught a generalized concept. From there, students speculate on probable conclusions and hypotheses, then search out the necessary information in an effort to test the conclusions. What the deductive, concept-oriented approach develops is the ability to apply a general concept, and the skills to resourcefully and efficiently locate the information needed to test one's speculative conclusions. To accelerate, simplify, and reinforce this process, the needed information could be made available through a computer retrieval system.

Let us consider how this method can be employed within a discipline through the use of the microcomputer. The following example pertains to basic music theory. The prerequisite information required of the student are knowledge of the definition and labeling of music intervals, the definition of a triad, and how to read treble clef.

Computer: Now I am going to show you how to derive various types of triads by teaching you a simple harmonic concept. This concept is:
"Triads are built with intervals."

CASH FLOW PROBLEMS?

IT'S NICE TO KNOW SOMEONE WHO HAS THE SOLUTION.

MicroAge is your Solution Store . . . that means at MicroAge Computer Stores we have a wide selection of time-saving computerized business systems designed specifically to solve the daily cash flow problems every businessman faces.

MicroAge has computerized business systems that

quickly and affordably allow you to regain control of your critical accounts receivable . . . at last making it possible for you to carry out effective collection procedures on a consistent basis. MicroAge has accounts receivable program packages to automatically display and update account information; prepare trial balance including a balance due and delinquency aging

report, and take care of dozens of other tasks that eat into your time and profit!

Computerized business systems from the MicroAge Computer Store are available in the \$5,000 to \$15,000 range, to suit the individual budget of your small business or professional practice. MicroAge backs up every system with personalized service, warranty service and repair, installation, systems consulting, even customer training. Visit the MicroAge Computer Store in your area soon with your business problems, and let us help you with the solution.

Figure 1: See text for details.

This means that by choosing an interval, and stacking notes on top of one another at the interval you have selected, you can form various types of triads and harmonic textures.

Let us begin by selecting one of the following notes on the treble clef staff shown in figure 1.

Student: A.

Computer: Now choose one of the following intervals:

- second
- third
- fourth
- fifth

Student: Fourth.

Computer: Very good. Now build the triad out of fourths using the note you selected as the

Figure 2: See text for details.

root of the chord. (List the two added notes.)

Student: D and G.

Computer: Correct! (See figure 2.)

Because this triad is built in fourths, it is called a quartal triad. Quartal harmony has been used by many twentieth-century composers. Now check the text file for information on quartal harmony and answer the following questions....

Now choose another interval...(etc)

Computer: This is a basic principle for building triads. Usually, students only learn about tertian harmony (chords built in thirds) in the early years of music theory. But by using this concept, you can jump ahead and learn to write triads which are usually considered advanced...

A third important element of concept-oriented education is the interdisciplinary transfer of knowledge. Here, we are dealing with unifying relationships among disciplines, usually closely related disciplines. In the arts for example, there are certain fundamental aesthetic elements that are common to media. Among these are contrast, intensity, and proportion. The techniques used to employ these elements in an artwork are different for every medium, but the aesthetic purpose served is essentially the same. Microcomputer programs could be developed to teach such interdisciplinary, isomorphic relationships. If used early enough in a child's education, a network of unity could be structured among the disciplines. Then, even when specialization becomes necessary later on, a holistic perspective would always remain with the student. ■

Chief Relief

For years many small business system buyers thought that in order to get "real" performance and enough storage to be a "real" business system they would have to sacrifice the family jewels.

But with the introduction of the Smoke Signal Chieftain series office computers a lot of people's minds have been changed.

Because we designed the highly reliable Chieftain small business system with the most innovative combination of performance and efficiency around.

At your fingertips there are 64,000 characters of random access memory and you can address anywhere from 740,000 characters to 2 million characters with Smoke Signal's new double density controller. For larger concerns, there's a 20M byte hard disk available.

At a time when other small computer manufacturers tell you "you're on your own", Smoke Signal offers an abundance of easy-to-use software programs such as order entry, inventory control,

accounts receivable, invoice entry, payroll, word processing and much, much more. There's BASIC, COBOL and FORTRAN — even a multi-user BOS (Business Operating System) that allows for numerous users simultaneously.

Chieftain systems starting at under \$200.00 per month display performance on par with systems costing twice to three times as much.

So call (213) 889-9340 for your nearest authorized Smoke Signal dealer — he'll be glad to demonstrate the Chieftain's high reliability and ease of operation.

We Interrupt This Program...

Gary V Small
Rt 1 Box 126
Scarborough ME 04074

The phrase "we interrupt this program to bring you an important announcement" is as applicable to computers as it is to radio or television. The interrupt system of a computer stops the program being processed to perform a more important task.

What is an interrupt? It is a computer control-signal input that is sampled by the microprocessor during every instruction cycle. If an external device has *asserted* (activated) the interrupt line, the microprocessor will cease processing the normal flow of instructions, put an *interrupt vector* on the address lines, and load the program counter with the address pointed to by the interrupt vector. The microprocessor can then begin execution of the interrupt-handling program found at this address.

Simply stated, an interrupt is a forced, immediate branch to some specified memory address in response to an externally generated control signal. A computer system will generally use additional hardware to implement a number of possible interrupts, each with its own priority and interrupt-handling routine.

Why Interrupt?

At present, few microprocessor-based systems are interrupt driven. Any program requiring I/O (input/output) operations, or timing functions, must employ a timing loop (a sequence of instructions that takes a known interval to execute) until the operation is complete. As an example, writing eighty characters to a teletypewriter at a rate of 110 bits per second would require about eight seconds. The processor uses most of this time to constantly sample the *transmitter ready* status of the interface involved. In eight seconds, an 8080A microprocessor could process about four million instructions. As you can see, sitting in a status-checking loop is not an efficient processing method.

Now suppose that the transmitter-ready signal from the interface is used to assert the interrupt line to the microprocessor. Whenever the interface is ready to accept another character, the processor is forced to branch to the output routine. It sends the next character, then returns to the main program. For the specific example we are using, this fairly simple

procedure results in making four million additional instruction periods available.

Obviously, in many low-level applications, it really doesn't matter how much time is spent in an I/O loop because the user won't be proceeding with the program until the output is complete. However, in many higher-level applications, such as multiprogramming and high-speed instrumentation programs, it becomes imperative that the processor not be tied up. Interrupt-driven software and hardware become essential. Multiuser, multiprogramming systems become feasible only in an interrupt-driven environment.

Any programming that requires timing or periodic functions can also benefit from the use of interrupts in conjunction with a programmable timer. Tasks such as keyboard scanning or display refreshing are very simple to accommodate using an interrupt system. There is very little impact on the main program task by occasional interrupts, and a little software can replace additional hardware.

**SOFTWARE
SUPPORT**

Reliable/low cost single board design w/Z80 CPU.

Supports 1 to 4 single density floppy disks.

External S100 Bus available for extended adaptability (12 slots).

Four serial RS232 ports (parallel option available).

Random Access Memory: 64K RAM standard.

Data Communications: Integrated modem or any RS232 compatible external modem.

Data Storage Power with 0.5 to 96 Megabytes available. The S100 Bus and SMD disk controller access a variety of hard disk systems:

BASF	8, 24, 40 Megabytes (fixed Winchester system)
AMPEX	32, 64, 96 Megabytes (fixed Winchester + removable cartridge)
CDC	32, 64, 96 Megabytes (fixed Winchester + removable cartridge)

Multiprocessing: Multiple computer boards can be mounted within the System 4000 chassis and each can support a separate user station with its own display terminal and printer. The terminal network is controlled by a master CPU and each slave has the computational speed and memory size necessary to execute sophisticated programs without burdening the other user stations.

Technical Forum

Multiple programs can also run under an interrupting, time-sharing system. Each program may be assigned a certain percentage of the total processing time. A timed interrupt and executive routine are used to rotate the processor between programs. The executive program, from which the interrupt branches, acts as a "traffic cop" to give each program its fair share of time.

Multilevel Interruption

A computer system generally has

several interrupting devices. To sort out these interrupts a priority scheme is generally used. The priority scheme assigns each device in the system a priority level, according to its importance. This allows the most important I/O devices to be serviced before those of lower priority. Except in the simplest interrupt implementations, a higher-level interrupt is allowed to interrupt the current routine of a lower-priority interrupt. In this way, several interrupt routines could conceivably be nested in a busy system.

Most microprocessors have only one general-purpose interrupt input, and external hardware must be used to resolve priorities between the various interrupt lines. The hardware may also provide for additional functions, such as individually selectable interrupt levels and nesting of interrupts. The hardware involved in a very simple interrupt system is shown in figure 1a. In this system, once an interrupt occurs, the interrupt system should remain disabled until completion of the interrupt routine. With this very simple implementation a high-level interrupt may not interrupt a lower-level routine once it is in progress.

For an interrupt to be recognized by the microprocessor an *enable interrupts* instruction must have been previously executed by the program. Additionally, some devices will require that a special interrupt register be set with the proper vectoring data. When an interrupt is recognized, the contents of the program counter will be pushed onto the stack, and the start address of the interrupt routine will replace the old program-counter data.

When an interrupt occurs, the return address is saved on the stack, and the processor branches unconditionally to the interrupt routine. The microprocessor will also disable its internal interrupt system whenever an interrupt occurs. Software must enable interrupts again before other interrupts will be recognized by the device.

An interrupt routine should also do some housekeeping to insure a successful return to the interrupted program. First, the contents of all the registers should be saved so that their contents can be restored prior to resuming the interrupted program. Depending upon your hardware, you may need to output the priority level of the current interrupt for comparison with incoming interrupts.

In the case of serial devices, such as terminals or cassette decks, the microprocessor is usually interfacing with a UART (universal asynchronous receiver-transmitter). These devices have signals indicating "receiver ready" and "transmitter ready" to assert interrupt lines. The signals can be used as independent interrupts (one per device) or can

PERSONAL COMMUNICATIONS

VersaModem™...BIZCOMP's Auto-Dial, Auto-Answer Intelligent Modem for Personal Computers

We started with a new bare-bones design for the Intelligent Modem.™ Then we fine-tuned our manufacturing process to bring you the BIZCOMP Intelligent VersaModem — the most cost-effective auto-dial, auto-answer data comm peripheral available!

It's no secret that the latest microcomputer applications need automatic dialing and automatic answer. The secret is in VERSATILITY and EASE OF USE. Other auto-dialing modems commit you to a particular computer bus. Not so with the VersaModem. It gives you full dialing control using an RS232 interface. One Intelligent Modem serves computers made by Apple, Radio Shack, Commodore, Atari and many others. That's right — RS232 compatibility protects your modem investment. Ease of use is assured with BIZCOMP's unique Code-Multiplexed Design. And the message command set is designed to simplify your applications software.

Before you buy a computer modem, look at BIZCOMP's versatility. Look at BIZCOMP's quality. With BIZCOMP's VersaModem you won't need another modem. If your local computer store doesn't already have a VersaModem on display, ask them when they will!

Spelling Checker for Professionals.

SPELLGUARD eliminates spelling and typographical errors in documents prepared with CP/M¹ or CDOS² word processors.

SPELLGUARD is a unique program that leads the microcomputing industry in its efficiency, ease of use, and reliability.

FAST

- Proofreads 20 pages in under one minute.*

POWERFUL

- 20,000 word dictionary, expandable with single keystroke.
- Properly handles hyphens and apostrophes.
- Allows multiple, technical dictionaries.

RELIABLE

- Over 500 shipped by March 1981.
- 30-day money-back limited warranty.
- Industry leading SoftguardTM feature ensures diskette copy of program is undamaged.

EASY TO USE

- On-line help feature.
- Misspelled words marked in text for easy, in-context correction.
- Examples of all functions in 120 page manual.

COST EFFECTIVE

- SPELLGUARD'S unique speed and accuracy easily recovers the suggested \$295 price.

*Time estimates based on double density 8" diskettes and 4Mhz system.

Trademarks: ¹Digital Research, ²Cromemco

Contact your local dealer or write ISA for a SPELLGUARD brochure.

INNOVATIVE SOFTWARE APPLICATIONS
P.O. Box 2797, Menlo Park, CA 94025
(415) 326-0805

Technical Forum

be combined into a single interrupt. In the latter case, software can examine the device status to determine the required operation. The act of servicing the UART will clear the condition of the signals.

In dealing with parallel devices such as printers, the usual feedback is in the form of a "busy" signal; inverted, this becomes a "ready" signal that can be used to generate an interrupt. Here again, servicing the device will clear the interrupt signal.

In a good system, the interrupt

hardware will allow interrupt nesting and individual selection of interrupts (see figure 1b). The computer interrupt system is a truly useful and efficient tool for increasing the throughput and general capabilities of a microprocessor-based computer system. With interrupts a whole world of high-level applications, such as multiuser systems, becomes feasible. Once understood, the interrupts system becomes an indispensable programming tool. ■

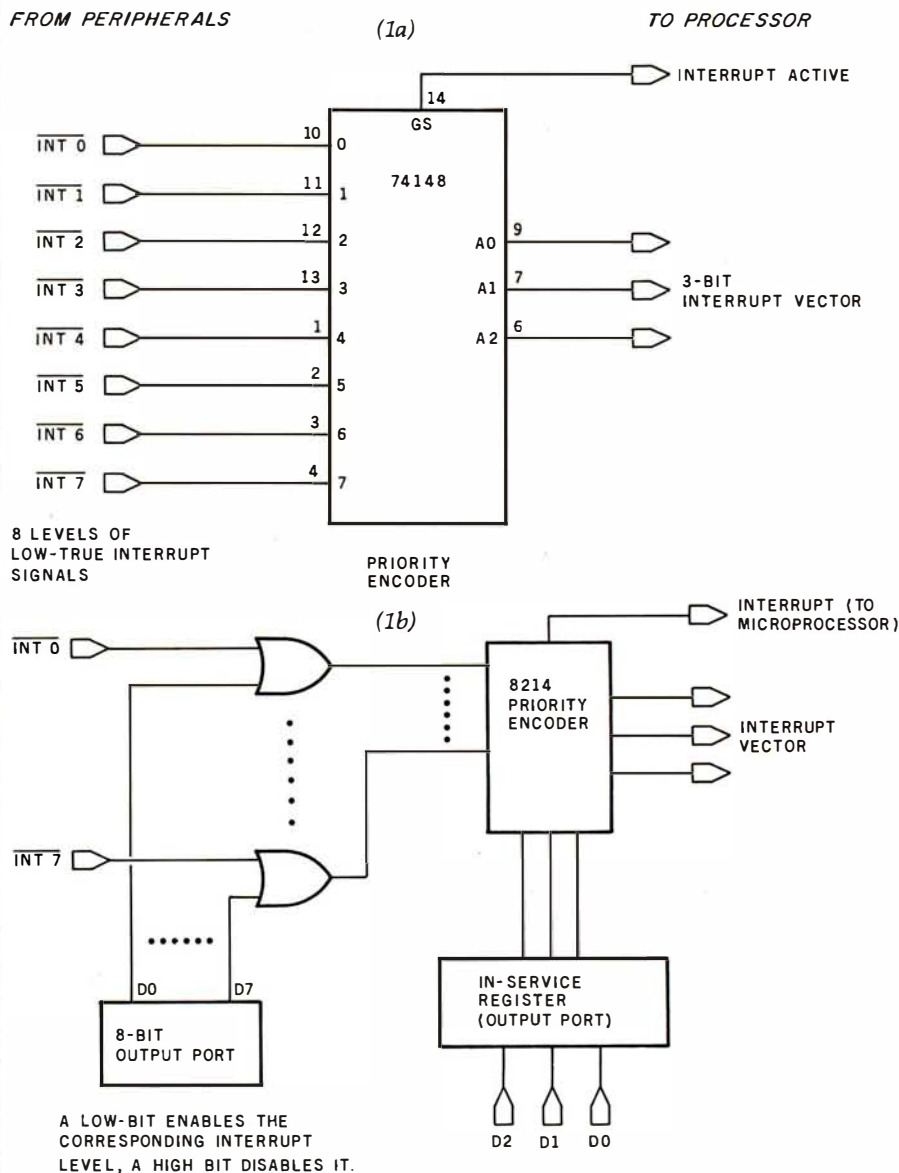

Figure 1: Hardware for handling multiple-level interrupts. This system allows a computer to handle the requests of peripheral devices in order of priority. The arrangement in figure 1a has the capacity to service eight separate priority levels. Each interrupt is completed before others are allowed. A more sophisticated scheme is shown in figure 1b. It has the ability to halt current interrupt service if a higher-level interrupt occurs (when the higher-level interrupt is finished, control is returned to the lower-priority interrupt and its service is completed).

Move Up to Tarbell

The Serious Business Machine

Do you have a small computer system that operates with mini-floppies and has limited storage capacity? Then it's time to move up to the Tarbell Empire Series System. Tarbell starts where small systems leave off, providing storage from 1 to 20 megabytes. This means Tarbell is capable of growing right along with your business. (It also makes sense to start with Tarbell if you're a first-time computer buyer.)

Tarbell is the serious general purpose business machine, backed by years of experience with disk systems. It gives you word processing, inventory control with bill of materials, mailing lists — all in addition to accounting applications: general ledger, payables, receivables, payroll with cost accounting and order entry. Whatever your need may be, Tarbell can provide the working software that gets the job done.

With the Tarbell System you get a Z80 4 Mhz CPU with memory management, timer and full interrupt capability, 2 RS-232 serial ports with handshaking, 64 K bytes of random-access memory, double density floppy disk interface, 2 double density floppy disk drives, cabinet, power supply, and cables.

The software includes: CP/M™ 2.2 disk operating system, Tarbell Disk BASIC, Tarbell Database System, and all manuals and documentation.

Tarbell also offers the MP/M™ Multi-User Operating System and 4 additional RS-232 serial ports.

The Tarbell Empire Series is delivered assembled, tested, and with a FULL six-month warranty on parts and labor.

And when you need even more mass storage, Tarbell also has a hard disk that's system-compatible and provides easy back-up.

If your business is growing or you need more than a few hundred K bytes — it's time to move up to Tarbell. Call your local Tarbell dealer for competitive prices.

Z80 Table Lookup

Thomas McCloud, 26572 Hickory Ave, Hayward CA 94544

Among the problems familiar to experienced programmers is that of table lookup: given a value (the argument, or *key*), search through a list of values of the same kind to find a matching entry. Then, once a match is found, extract the corresponding entry (the function, or *result*) from a second list, often of a different kind of data. This article discusses a single table-lookup routine (written specifically for a Zilog Z80 microprocessor) that, given an 8-bit value, finds a corresponding 16-bit value. As such, this article is of primary interest only to Z80 programmers. But it shows them how the special instructions peculiar to the Z80 can be used to good effect.

The routine, ZTL, is shown in listing 1. It achieves a great economy of program size, and a good economy of execution time, by using the special Z80 block-search instruction, CPDR (Compare, Decrement and Repeat). The

similar search instruction, CPIR (Compare, Increment and Repeat), may seem more natural to use. But for the routine presented here, CPDR provides more easily used "leftover information" in the BC register pair.

To show how the routine works, consider the following example. A computer-system monitor is being written. The system user types a single character command, and the system responds by performing an indicated action. The commands are:

- I — Initialize system
- D — Display hexadecimal memory dump
- G — Get a file from external media
- X — Execute a program
- E — Enter hexadecimal data into memory
- B — Set a breakpoint

Some of the commands need additional data, such as the address at which a breakpoint is to be set. However, the only current concern is to identify the command and branch to the address of the corresponding command-handling routine. Listing 2 shows the memory arrangement of the table for ZTL. (Values given for the addresses of the command-handling routines are purely arbitrary.)

The call to use the ZTL routine is shown in listing 3. Listing 4 shows a step-by-step illustration of the contents of each register involved, assuming that the program has extracted a G command from the typed input.

The first two instructions simply copy the contents of the BC register pair (used to hold the byte count) into the DE register pair (to be used later). The next instruction is the Z80 CPDR. It is executed four times in the current example. On the first execution, the G in register A is compared to the B at the location (hexadecimal 12F5) indicated by the HL register pair, the contents of HL are decremented from hexadecimal 12F5 to 12F4, and the byte count is decremented from 6 to 5. Since the bytes compared did not match, and the byte count did not go to zero, the instruction is repeated, using the new values in the HL and BC register pairs.

On the fourth execution of the CPDR instruction, the G in register A is compared to the G at the location indicated by the HL register pair (hexadecimal 12F2), the contents of HL are decremented from hexadecimal 12F2 to 12F1, and the byte count is decremented from 3 to 2. Since the bytes compared did match, the instruction is not repeated. Notice that the HL register no longer points to the G in the table; it points one location below the G. This is a nuisance caused by Zilog's choice of a "post-test

ROCHESTER DATA

incorporated

3000 Winton Road South, Rochester, N.Y. 14623

Play with a full deck.

Introducing the RM 65 line of microcomputer boards.

The RM 65 line gives you the options and flexibility to design precisely the microcomputer systems you need.

And you can do it quickly and economically. Because you're offered so many design alternatives.

Application software for the RM 65 line, for example, can be programmed in a number of languages: BASIC, PL/65, FORTH and Assembly Language.

RM 65 uses a mother-board interconnect concept so any card will fit any slot.

You can choose either edge connector or Eurocard versions.

And a set of card cages allows a broad variety of packaging options.

Single Board Computer Module
R6502 CPU, 2K bytes static RAM, 16K bytes PROM/ROM capacity, an R6522 VIA and support circuitry on a single RM 65 module.

RM 65 MODULES

loop" approach instead of a "pre-test loop." It is not difficult to compensate for it, but it is easy to forget.

The next instruction executed is a RET NZ (return on not zero), which provides an exit when the byte for which a match is sought does not occur in the table. In the current example, this return is not taken. Following the RET NZ is an instruction to increment the contents of the HL register pair. This instruction is used to compensate for the incorrect value stored in the HL register, described above.

The next two instructions compute the address of the first (low-order due to high/low storage reversal) byte of the sought argument—the corresponding entry in the second part of the table. Suppose B is the beginning address of the first part of the table, L is the length of the first part of the table, and I is the position of the sought byte in the table, I ranging from 1 to L . The second part of the table starts at address $B + L$, and the sought entry starts at address $B + L + (I - 1) \times 2$. At this point in the execution of the routine, BC holds $I - 1$, because the CPDR decrements the byte count once too often, as well as the address in HL. Furthermore, the address in HL is $B + (I - 1)$ (compensated). So, when the routine adds BC to HL:

$$HL = B + (I - 1) + (I - 1)$$

Then, adding the table length L , saved in DE:

$$HL = B + (I - 1) + (I - 1) + L$$

so:

$$HL = B + L + (I - 1) \times 2$$

which is the address of the sought argument.

Text continued on page 174

Listing 1: ZTL, a table-lookup routine for the Z80 microprocessor. The use of the Z80's block-search instructions makes this routine short and fast, but some of the microprocessor's idiosyncrasies need compensation.

```

S-100 USERS: GIVE YOUR COMPUTER THE GIFT OF SIGHT!

The DS-80 Digisector® is a random access video digitizer. It works in conjunction with a TV camera (either interlaced or non-interlaced video) and any S-100 computer conforming to the IEEE standards. Use it for:

- Precision Security Systems
- Moving Target Indicators
- Computer Portraiture
- Fast To Slow Scan Conversion
- Robotics
- Reading UPC Codes, schematics, paper tape, musical scores

● IMAGE PROCESSED BY DS-80 ●

CHECK THESE FEATURES:

- ☐ **High resolution** — a 256 × 256 picture element scan
- ☐ **Precision** — 64 levels of grey scale
- ☐ **Speed** — Conversion time of 14 microseconds per pixel
- ☐ **Versatility** — scanning sequences user programmable
- ☐ **Economy** — a professional tool priced for the hobbyist; comes fully assembled, tested and burned in, with fully commented portrait printing software.

Price: \$349.95 MasterCharge and Visa

**"If your database system
is so terrific,
why doesn't the world
beat a path to your door?"**

It is.

And the way is paved by the MDBS product line: database management systems second to none.

None.

The reasons are as plentiful as our product features. Such as the most important of all: increased productivity — thanks to the successful management of peopleware, hardware and software.

With MDBS database systems, you tailor the software to fit the organization easily: because our system is the most flexible around, offering speed; low cost

going in; fast startup; less programmer time... plus you can use it on a variety of hardware configurations using an even more extensive variety of languages.

(One example: with MDBS you can transform a programming language from an ordinary file management system into a full fledged database system without missing a beat.)

So, please take our invitation and give us a call, write or TWX. Instead of beating the *bushes*, beat the *path*... to success.

MDBS: We manage success.

EPSON PRODUCTS

MX80/70 FRICTION FEED KIT by Orange Micro

HERE AT LAST! A friction feed kit for your EPSON MX80/70. The kit allows the user to convert his Epson printer to a friction feed and pin feed mechanism.

The friction feed will accept single sheets of your letterhead, or multiple copy forms such as invoices with up to 4 part carbon copies.

The pin feed replaces the adjustable sprocket mechanism. It allows use of 9½" wide continuous fan-fold paper which is an industry standard size.

No drilling required. Installation takes about 15 minutes. All parts are included with easy to follow instructions.

APPLE INTERFACE For Epson

The Grappler™ interface card is the first to provide on-board firmware for Apple high resolution dot graphics. No longer does the user need to load clumsy software routines to dump screen graphics — it's all in a chip. Actually, it's our E-PROM, and it is replaceable to accommodate the Anadex, Epson MX80 & MX70, IDS Paper Tigers, Contronics 739, and future graphics printers. The Grappler™ accepts 17 software commands including Hi-Res inverse, 90° rotation, double size, and much more.

Text continued from page 170:

The next instructions pick up the low-order byte, increment HL, and pick up the high-order byte of the sought argument word. They are put directly into the DE register

pair by means of the HL register indirect instructions. If the answer is useful in DE, the routine can be ended here with a return; but, since an answer is generally more useful in the HL register pair, the routine as shown includes an exchange of DE with HL.

Finally, the routine ends with a simple unconditional return statement. It is important to note that *none* of the instructions following the CPDR will affect the zero flag. This allows the calling routine to easily determine if a match was found by examining the zero flag. The fact that the 16-bit ADD (without including previous carry) instructions do not set the zero flag is often a nuisance. But in this routine it is an advantage.

Beyond Tables

This article described a simple routine with a great deal of power. The example of usage presented dealt with finding the address of a software routine when given a single character command. However, the same routine can be called whenever you want to find 16 or fewer bits of information from a single 8-bit value. For example, it could be used to interpret single-byte codes used to store 3-digit telephone prefixes. Or it might be useful in a compiler to store a table of kinds of variables and their attributes. Hopefully, you will find that problems of your own can be solved with this simple and efficient routine. ■

for your TRS-80® Model I & III****CHEXTEXT** (pronounced Check Text)

Apparat, Inc. announces CHEXTEXT, a variable length dictionary which interacts with SCRIPTSIT®, to highlight potential **spelling** and **typographical** errors in a text file.

Some of the CHEXTEXT features are:

- Variable Length Dictionary: The dictionary may be supplemented, depending on your system hardware (i.e. disk drive storage).
- Menu Driven.
- User Oriented.
- Dictionary may be complemented with unique industry jargon.
- A dual 80 track drive supports an approximate 50,000 word dictionary. Smaller dictionaries are provided with Basic CHEXTEXT Package (10,000 to 20,000 words.) Minimum system requirement—2 disk drives and 48K.
- Complete documentation.
- Reduces time required for proofreading.

**Available from Apparat, Inc. for only
\$79⁹⁵
Catalog No. 2-148**

TRS-80 DIGITAL TALKER:

A low cost alternative to the TRS-80 Voice Synthesizer.

Allows voice synthesis with no additional hardware on your TRS-80 Model I Level II or Model III 16K versions. The voice signals are generated via the cassette output port. A Radio Shack external speaker/AMP can be used for sound output.

"On-going Support for Microcomputers"

®REGISTERED TRADEMARKS OF TANDY CORP.

Four Word Processors for the Apple II

The world of word processors has expanded rapidly in the past few years, and it appears to be only the beginning. We have seen a flourish of office automation machines from the big manufacturers, but with few exceptions the small machine software manufacturers have led the way. And, after reviewing some of the word-processing systems designed for microcomputers, we discovered that they have several advantages.

It was a temptation when reviewing these word processors to compare them to their large mainframe brothers. Eventually we stopped resisting that temptation. Both Steve and I have access in our work to such mainframe word processors as those by Wang and Honeywell. The com-

Keith Carlson
43 McDill Rd
Bedford MA 01730

Steve Haber
14 Larchmont Dr
Nashua NH 03062

parison hardly seems fair, but in reality most of the microcomputer word processors offer the features found in their larger brothers: in fact, a few of them are easier to use and learn, while still providing all of the features a user could possibly want. This will be evident in specific reviews.

There are two kinds of word processors: *screen-* or *cursor-oriented*, and *line-oriented*. Cursor-oriented

means that the editing and entry take place at the cursor, which is moved throughout the text. In line-oriented word processors, all text is entered and referred to with line numbers. Neither method appears to have a distinct advantage over the other: they are merely different ways of referencing the text.

Super-Text

Super-Text is a super word processor that, despite minor problems, exhibits some of the power-packed features you would expect in a word processor designed for a much larger machine. Super-Text (from Muse Software) can be easily adapted to your current equipment, as well as any you may acquire in the future.

Photo 1: Apple word processors: the Datacopia Scribe, the Rainbow Write-On!, the IUS EasyWriter Professional system, and the Muse Super-Text II. (The cream-colored binder in the upper left corner is for Super-Text I, which has been discontinued by Muse.)

Now proven baZic can be run on any Z80® computer under CP/M® baZic is written entirely in Z80 code — runs faster than any other BASIC interpreter. The greater execution speed is significantly advantageous for heavy number crunching, multi-user and multi-tasking operations.

baZic has all the features of North Star® BASIC — and then some. baZic, with minor exceptions, is 100% compatible with existing North Star BASIC programs. Our new baZic runs under all Micro Mike's timesharing and hard disk operating software.

CHECK THESE FEATURES AT YOUR COMPUTER DEALER:

- Takes full advantage of the Z80 instruction set.
- Can be used on any Z80-based microcomputer operating under North Star® DOS or CP/M.
- Support North Star floating point board for even faster execution of compute-intensive programs.
- The most friendly BASIC available.

- Improves performance of multi-user hard disk systems.
- baZic adds functions to assist in screen formatting, as well as features to simplify programming, e.g. APPEND as a statement, ON GOSUB, cursor-addressable PRINT, enhanced editing features, etc.
- baZic as shipped includes 8, 10, 12, and 14 digit precisions, including both software and hardware floating point versions.
- baZic is also available for the Apple II® under CP/M with the SoftCard™

OEMs and dealers contact Silverman Associates for details. 4010 Opal Street, Oakland, CA 94609. (415) 428-2954. All other inquiries should be to your dealer or Micro Mike's.

Hard fact:

\$150 makes your Z80-based computer run up to 40% faster!

With the Dan Paymar lowercase adapter (which allows the Apple to display lowercase letters), this processor supports true lowercase.

Super-Text also allows conversion of files for use with the Paymar lowercase adapter. However, it does not allow the reverse, so you must either keep two copies of the text file or always use an Apple II with the lowercase adapter. Most of the other Apple II word processors use reverse-video to represent uppercase letters on the screen. If you don't have a Paymar lowercase adapter, Super-Text places a reverse-video A in front of the character to be capitalized, instead of highlighting the character it-

self. This can be confusing until you get used to it, because the reversed A does not print when you print the file. We found that we had a tendency to compensate for the nonprinting character when lining up text. You have to use the control key as a shift, but Super-Text will support the use of the shift key with a minor modification to the keyboard. (Muse provides the short piece of wire and instructions for the modification.)

Super-Text does not support an 80-column board, but it simulates 80 columns by using a preview mode. This mode allows you to see what your text will look like on paper, with obvious limitations on color, super-/

subscripting, and underlining. (In any case, these limitations are dependent upon the printer that you use.)

Since you can only see the leftmost 40 columns on the screen, the preview mode allows you to move the left margin to the right to see the other half of the document; however, we found the operation awkward to use because the text scrolls past quickly. Still, this arrangement is better than wasting paper to see what you have written.

Super-Text uses the wraparound method of text entry (ie: if a word will not fit on a line, the entire word is automatically moved to the next line). Some word processors use a

WE'RE ABOUT TO DISCLOSE OUR SECRET FORMULA

THE FORMULA™ represents a new concept in report generation. It takes information management one step further into the future. **THE FORMULA™** now makes it possible to visually describe the format of desired reports by using a unique full screen editor. All types of reports (including invoices, financial statements, legal forms, letters, etc.) can be defined interactively on a terminal simply by typing the format on the screen. It is programmed for multiple file access, algorithmic calculations and conditional printing. Incorporating DMA's information manager, The Configurable Business System.™ **THE FORMULA™** provides a flexible framework you can easily adapt to your own individual needs.

Complete System \$595. Manual only \$60.

THE FORMULA™ runs on any 8080 or Z80 computer with CP/M*, 48K RAM, 300K total disk storage, and a CRT (min. 16x64).

DMA • WE SPEAK YOUR LANGUAGE.

We ship prepaid and COD orders. Shipping & handling charges extra: \$5 UPS areas; \$7 non-UPS areas. Mexico, Canada: \$10+ elsewhere. MasterCard and VISA accepted.

Mark of the Unicorn

Amethyst

puts you in Command
of your text

Talk with Amethyst about words, sentences, paragraphs, chapters, quotations, footnotes, and more—it understands. Its ability to edit and display several documents and programs at once is absolutely unequalled by any other system.

Amethyst can be modified to suit your needs because we supply the source for the commands. You can arbitrarily alter the behavior of any command!

One year's support is included—we don't leave you to fend for yourself. And our thorough, readable documentation has received high acclaim from our users. Amethyst comes with the BDS C compiler. How many other word processing systems let you write programs as well?

Amethyst \$350 (less C compiler \$250) manual \$35

Mince (Amethyst text editor) \$125 manual \$15 demo disk \$10

Scribble (Amethyst text formatter) \$125 manual \$15

Mince and Scribble ordered together \$175

48K CP/M^R required. Available on 8" soft sector diskettes. Mince and Amethyst require a cursor-addressable terminal. Dealer, site, OEM, and **NIX versions and licenses available.

OFFER EXPIRES 6/30/81

TERMS: Prices and specifications are subject to change. HARDSIDE accepts VISA & MASTERCARD. Certified checks and Money Orders; Personal checks accepted (takes 3 weeks to clear). HARDSIDE Pays all shipping charges (within the 48 states) on all PREPAID orders OVER \$100.00. On all orders under \$100 a \$2.50 handling charge must be added. COD orders accepted (orders over \$250 require 25% deposit) there is a \$5.00 handling charge. UPS Blue Label, and Air Freight available at extra cost. TRS-80 is a trademark of Tandy Corp.

"hot zone" to prompt for hyphenation, but if you want hyphenation with Super-Text you must perform it manually. By embedding control characters in the text, you can instantly invoke format changes, tab stops, automatic paragraph indentation, word centering, and left margin changes. These control characters appear as reverse video letters. Super-Text formats the text upon printout, so the effects of these control characters are visible only on printout or during preview mode.

The only files Super-Text will accept, other than those written by itself, are Dr Memory files. (Dr Memory is the predecessor of Super-Text.) Muse also has add-on modules that can produce form letters (available for \$100), input files by telecommunication (\$75), and plot graphs (no price quoted).

Super-Text's ability to edit is excellent. The word processor is cursor-oriented, and it gives the user a full set of commands to move the cursor about the text. The cursor scrolls backward or forward by operator choice, and the direction is clearly marked in the lower left-hand corner. The replacement, deletion, insertion, and rearrangement of text processes are all easy to use and understand. However, one minor problem appears with insertion: normally insertion occurs in front of the current cursor location—with Super-Text, it occurs *after* the cursor location. This is unnerving and hard to get used to. Super-Text can also copy blocks of text easily throughout the text file, and it can save and load blocks of text separately, a feature that is especially helpful with "boilerplate" files used in business correspondence.

Find-and-replace operations are easy and efficient. The operations even include a "wild card" notation that will match any number of intervening characters (including none). For example, an attempt to find "COMPUT#WORLD" would match "COMPUTER WORLD" or "COMPUTING WORLD". Super-Text is loaded with prompts that make find-and-replace operations easy for the operator.

DYNACOMP

Quality software for*:

ATARI
PET
APPLE II Plus

TRS-80 (Level II)*
NORTH STAR
CP/M 8" Disk

GAMES, SIMULATIONS, EDUCATION AND MISCELLANEOUS

BRIDGE 2.0 (Available for all computers) Price: \$17.95 Cassette/\$21.95 Diskette
An all-inclusive version of this most popular of card games. This program both BIDS and PLAYS either contract or duplicate bridge. Depending on the contract, your computer opponents will either play the offense OR defense. If you bid too high, the computer will double your contract! BRIDGE 2.0 provides challenging entertainment for advanced players and is an excellent learning tool for the bridge novice.

HEARTS 1.5 (Available for all computers) Price: \$14.95 Cassette/\$18.95 Diskette
An exciting and entertaining computer version of this popular card game. Hearts is a trick-oriented game in which the purpose is not to take any hearts or the queen of spades. Play against two computer opponents who are armed with hard-to-beat playing strategies.

CRIBBAGE (TRS-80 only) Price: \$14.95 Cassette/\$18.95 Diskette
This is simply the best cribbage game available. It is an excellent program for the cribbage player in search of a worthy opponent as well as for the novice wishing to improve his game. The graphics are superb and assembly language routines provide rapid execution.

STUD POKER (ATARI only) Price: \$11.95 Cassette/\$15.95 Diskette
This is the classic gambler's card game. The computer deals the cards one at a time and you (and the computer) bet on what you see. The computer does not cheat and usually bets the odds. However, it sometimes bluffs! Also included is a five-card draw poker betting practice program. This package will run on a 16K ATARI. Color, graphics, sound.

POKER PARTY (Available for all computers) Price: \$17.95 Cassette/\$21.95 Diskette
POKER PARTY is a draw poker simulation based on the book, POKER, by Oswald Jacoby. This is the most comprehensive version available for microcomputers. The party consists of yourself and six other (computer) players. Each of these players you will get to know (them) has a different personality in the form of a varying propensity to bluff or fold under pressure. Practice with POKER PARTY before going to that expensive game tonight! Apple Cassette and diskette versions require a 32 K (or larger) Apple II.

NOMINOES JIGSAW (Atari, Apple and TRS-80 only) Price: \$16.95 Cassette/\$20.95 Diskette
A jigsaw puzzle on your computer! Complete the puzzle by selecting your pieces from a table consisting of 60 different shapes. NOMINOES JIGSAW is a virtuoso programming effort. The graphics are superb and the puzzle will challenge you with its three levels of difficulty. Scoring is based upon the number of guesses taken and by the difficulty of the board set-up.

CRANSTON MANOR ADVENTURE (North Star only) Price: \$19.95
At last! A comprehensive Adventure game for the North Star. CRANSTON MANOR ADVENTURE takes you in mysterious CRANSTON MANOR where you attempt to gather fabulous treasures. Lurking in the manor are wild animals and robots who will not give up the treasures without a fight. The number of rooms is greater and the associated descriptions are much more elaborate than the current popular series of Adventure programs, making this game the top in its class. Play can be stopped at any time and the status stored on diskette. Requires 32K.

VALDEZ (Available for all computers) Price: \$14.95 Cassette/\$18.95 Diskette
A simulation of super-tanker navigation in the Prince William Sound and Valdez Narrows. The program uses an extensive 256X256 element radar map and employs physical models of ship response and tidal patterns. Chart your own course through ship and iceberg traffic. Any standard terminal may be used for display.

FLIGHT SIMULATOR (Available for all computers) Price: \$17.95 Cassette/\$21.95 Diskette
A realistic and extensive mathematical simulation of take-off, flight and landing. The program utilizes aerodynamic equations and the characteristics of a real aircraft. You can practice instrument approaches and navigation using radials and compass headings. The more advanced flyer can also perform loops, half-rolls and similar aerobatic maneuvers.

STARTREK 3.2 (Available for all computers) Price: \$ 9.95 Cassette/\$13.95 Diskette
This is the classic Star Trek simulation, but with several new features. For example, the Klingons now shoot at the Enterprise without warning while still among the stars. The Klingons also attack with both light and heavy cruisers and most when shot at. The situation is hectic when the Enterprise is besieged by three heavy cruisers and a starbase. O.S. is received. The Klingons get even!

CHESS MASTER (North Star and TRS-80 only) Price: \$19.95 Cassette/\$23.95 Diskette
This complete and very powerful program provides five levels of play. It includes castling, en passant captures and the promotion of pawns. Additionally, the board may be preset before the start of play, permitting the examination of "book" plays. To maximize execution speed, the program is written in assembly language (by SOFTWARE SPECIALISTS of California). Full graphics are employed in the TRS-80 version, and two widths of alphanumeric display are provided to accommodate North Star users.

BLACK HOLE (Apple only) Price: \$14.95 Cassette/\$18.95 Diskette
This is an exciting graphical simulation of the problems involved in closely observing a black hole with a space probe. The object is to enter and maintain, for a prescribed time, an orbit close to a small black hole. This is to be achieved without coming so near the anomaly that the tidal stress destroys the probe. Control of the craft is realistically simulated using side jets for rotation and main thrusters for acceleration. This program employs Hi-Res graphics and is educational as well as challenging.

HODGE PODGE (Apple only, 48K Integer BASIC) Price: \$19.95 Cassette/\$23.95 Diskette
Let HODGE PODGE be your child's baby-sitter. Pressing any key on your Apple will result in a different and intriguing "happening" related to the letter or number of the chosen key. The program's graphics, color and sound are a delight for children (ages 1 1/2 to 9). HODGE PODGE is a non-intimidating teaching device which brings a new dimension to the use of computers in education. HODGE PODGE requires a 48K Apple running with Integer BASIC.

TEACHER'S PET I (Available for all computers) Price: \$ 9.95 Cassette/\$13.95 Diskette
This is the first of DYNACOMP's educational packages. Primarily intended for pre-school to grade 3, TEACHER'S PET provides the youngsters with counting practice, letter-word recognition and three levels of math skill exercises.

SPACE TILT (Apple only) Price: \$10.95 Cassette/\$14.95 Diskette
Use the game paddles to tilt the plane of the TV screen to "roll" a ball into a hole in the screen. Sound simple? Not when the hole gets smaller and smaller! A built-in timer allows you to measure your skill against others in this habit-forming action game.

MOVING MAZE (Apple only) Price: \$13.95 Cassette/\$18.95 Diskette
MOVING MAZE employs the game paddles to direct a puck from one side of a maze to the other. However, the maze is dynamically (and randomly) built and is continually being modified. The objective is to cross the maze without touching (or being hit by) a wall. Scoring is by an elapsed time indicator, and three levels of play are provided.

ALPHA FIGHTER (Atari only) Price: \$14.95 Cassette/\$18.95 Diskette
Two excellent graphics and action programs in one! ALPHA FIGHTER requires you to destroy the alien starships passing through your sector of the galaxy. ALPHA BASE is the on/off of an alien UFO invasion; let five UFO's get by and the game ends. Both games require the joystick and get progressively more difficult the higher you score!

INTRUDER ALERT (Atari only) Price: \$16.95 Cassette/\$20.95 Diskette
This is a fast-paced graphics game which places you in the middle of the "Dreadstar" having just stolen its plans. The Dreadstar has alerted and are directed to destroy you at all costs. You must find and enter the proper key to escape with the plans. Five levels of difficulty are provided. INTRUDER ALERT requires a joystick and will run on 16K systems.

GIANT SLALOM (Atari only) Price: \$14.95 Cassette/\$18.95 Diskette
This real-time action game is guaranteed addictive! Use the joystick to control your path through slalom courses consisting of both open and closed gates. Choose from different levels of difficulty, race against other players or simply take practice runs against the clock. GIANT SLALOM will run on 16K systems.

CRYSTALS (ATARI only) Price: \$ 9.95 Cassette/\$13.95 Diskette
A unique algorithm randomly produces fascinating graphics displays accompanied with tones which vary as the patterns are built. No two patterns are the same, and the combined effect of the sound and graphics are mesmerizing. CRYSTALS has been used in local stores to demonstrate the sound and color features of the Atari.

CHOMP-OTHELLO (Atari only) Price: \$11.95 Cassette/\$15.95 Diskette
CHOMP-OTHELLO is really two challenging games in one. CHOMP is similar in concept to NIM; you must bite off part of a cookie, but avoid taking the poisoned portion. OTHELLO is the popular board game set to fully utilize the Atari's graphics capability. It is also very hard to beat! This package will run on a 16K system.

GAMES PACK I (Available for all computers) Price: \$9.95 Cassette/\$13.95 Diskette
GAMES PACK I contains the classic computer games of BLACKJACK, LUNAR LANDER, CRAPI, HORSEACE, SWITCH and more. These games have been combined into one large program for ease in loading. They are individually accessed by a convenient menu.

GAMES PACK II (Available for all computers) Price: \$9.95 Cassette/\$13.95 Diskette
GAMES PACK II includes the games CRAZY EIGHTS, JOTTO, ACEY-DEUCEY, LIFE, WUMPLUS and others. As with GAMES PACK I, all the games are loaded on one program and are called from a menu.

Why pay \$9.95 or more per program when you can buy a DYNACOMP collection for just \$9.95?

NORTH STAR SOFTWARE EXCHANGE (NSSE) LIBRARY Price: \$9.95 Diskette
DYNACOMP now distributes the 20+ volume NSSE library. Most of these diskettes offer an outstanding value for the purchase price. Write for details regarding the contents of this library and quantity (four or more) purchases.

Availability

DYNACOMP software is supplied with complete documentation containing clear explanations and examples. Unless otherwise specified, all programs will run within 16K program memory space (ATARI requires 24K). Except where noted, programs are available on ATARI, PET, TRS-80 (Level II) and Apple (Apple II) cassette and diskette as well as on North Star single density (double density compatible) diskette. Additionally, most programs can be obtained on standard (IBM format) 8" CP/M floppy disks for systems running under MIBASIC.

BUSINESS and UTILITIES

MAIL LIST 2.2 (Apple, Atari and North Star diskette only) Price: \$34.95
This program is unmatched in its ability to store a maximum number of addresses on one diskette (minimum of 1100 per diskette, more than 2200 for "double density" systems!). Its many features include alphabetic and zip code sorting, label printing, merging of files and a unique keyring routine which retrieves entries by a virtually limitless selection of user-defined codes. A very valuable program!

FORM LETTER SYSTEM (FLS) (Apple and North Star diskette only) Price: \$21.95
Use FLS to create and edit form letters and address lists. Form letters are produced by automatically inserting each address into a predetermined portion of your letter. FLS is completely compatible with MAIL LIST 2.2, which may be used to manage your address files.

FLS and MAIL LIST 2.2 are available as a combined package for \$49.95.

PERSONAL FINANCE SYSTEM (ATARI only) Price: \$34.95 Diskette
PFS is a single disk menu oriented system composed of 10 programs designed to organize and simplify your personal finances. Features include a 300 transaction capacity; fast access; 26 optional user codes; data retrieval by month, code or payer; optional printing of reports; checkbook balancing; bar graph plotting and more. Also provides on the diskette is ATARI DOS 2.

FINDIT (North Star only) Price: \$19.95
This is a three-in-one program which maintains information accessible by keywords of three types: Personal (eg: last name), Commercial (eg: plumbers) and Reference (eg: magazine articles, record albums, etc.). In addition to keyword searches, there are birthday, anniversary and appointment searches for the personal records and appointment searches for the commercial records. Reference records are accessed by a single keyword or by cross-referencing two or three keywords.

DFILE (North Star only) Price: \$19.95
This handy program allows North Star users to maintain a specialized data base of all files and programs in the stack of disks which variably accumulates. DFILE is easy to set up and use. It will organize your disks to provide efficient locating of the desired file or program.

GRAFIX (TRS-80 only) Price: \$12.95 Cassette/\$16.95 Diskette
This unique program allow you to easily create graphics directly from the keyboard. You "draw" your figure using the program's extensive cursor controls. Once the figure is made, it is automatically appended to your BASIC program as a string variable. Draw a "happy face", call it H5 and then print it out using PRINT H5. This is a very easy way to create and save graphics.

TIDY (TRS-80 only) Price: \$10.95 Cassette/\$14.95 Diskette
TIDY is an assembly language program which allows you to renumber the lines in your BASIC programs. TIDY also removes unnecessary spaces and REMARK statements. The result is a compacted BASIC program which uses much less memory space and executes significantly faster. Once loaded, TIDY remains in memory; you may load any number of BASIC programs without having to reload TIDY!

STATISTICS and ENGINEERING

DATA SMOOTHER (Not available for ATARI) Price: \$14.95 Cassette/\$18.95 Diskette
This special data smoothing program may be used to rapidly derive useful information from noisy business and engineering data which are equally spaced. The software features choice in degree and range of fit, as well as smoothed first and second derivative calculation. Also included is automatic plotting of the input data and smoothed results.

FOURIER ANALYZER (Available for all computers) Price: \$14.95 Cassette/\$18.95 Diskette
Use this program to examine the frequency spectra of limited duration signals. The program features automatic scaling and plotting of the input data and results. Practical applications include the analysis of complicated patterns in such fields as electronics, communications and business.

TFA (Transfer Function Analyzer) Price: \$19.95 Cassette/\$23.95 Diskette
This is a special software package which may be used to evaluate the transfer functions of systems such as hi-fi amplifiers and filters by examining their response to pulsed inputs. TFA is a major modification of FOURIER ANALYZER and contains an engineering-oriented decibel versus log-frequency plot as well as data editing features. Whereas FOURIER ANALYZER is designed for educational and scientific use, TFA is an engineering tool. As available for all computers.

HARMONIC ANALYZER (Available for all computers) Price: \$24.95 Cassette/\$28.95 Diskette
HARMONIC ANALYZER was designed for the spectrum analysis of repetitive waveforms. Features include data file generation, editing and storage/retrieval as well as data and spectrum plotting. One particularly unique facility is that the input data need not be equally spaced or in order. The original data is sorted and a cubic spline interpolation is used to create the data file required by the FFT algorithm.

FOURIER ANALYZER, TFA and HARMONIC ANALYZER may be purchased together for a combined price of \$44.95 (three cassettes and \$56.95 (three diskettes).

REGRESSION I (Available for all computers) Price: \$19.95 Cassette/\$23.95 Diskette
REGRESSION I is a unique and exceptionally versatile one-dimensional least squares "polynomial" curve fitting program. Features include very high accuracy; an automatic degree determination option; an extensive internal library of fitting functions; data editing, automatic data and curve plotting; a statistical analysis (eg: standard deviation, correlation coefficient, etc.) and much more. In addition, new fits may be tried without reentering the data. REGRESSION I is certainly the cornerstone program in any data analysis software library.

REGRESSION II (PARAFIT) (Available for all computers) Price: \$19.95 Cassette/\$23.95 Diskette
PARAFIT is designed to handle those cases in which the parameters are imbedded (possibly nonlinearly) in the fitting function. The user simply inserts the functional form, including the parameters (A1, B1, A2, etc.) as one or more BASIC statement lines. Data and results may be manipulated and plotted as with REGRESSION I. Use REGRESSION I for polynomial fitting, and PARAFIT for those complicated functions.

MULTILINEAR REGRESSION (MLR) (Available for all computers) Price: \$24.95 Cassette/\$28.95 Diskette
MLR is a professional software package for analyzing data sets containing two or more linearly independent variables. Besides performing the basic regression calculation, this program also provides easy to use data entry, storage, retrieval and editing functions. In addition, the user may interrogate the solution by supplying values for the independent variables. The number of variables and data size is limited only by the available memory.

REGRESSION I, II and MULTILINEAR REGRESSION may be purchased together for \$49.95 (three cassettes) or \$61.95 (three diskettes).

BASIC SCIENTIFIC SUBROUTINES, Volume I (Not available for ATARI)
DYNACOMP is the exclusive distributor for the software key to the text BASIC Scientific Subroutines, Volume I by F. Ruckdeschel (see the BYTE/McGraw-Hill advertisement in BYTE magazine, January 1981). These subroutines have been a valuable addition to chapter. Included with each collection is a menu program which selects and demonstrates each subroutine.

Collection #1: Chapters 2 and 3: Data and function plotting, complex variables
Collection #2: Chapter 4: Matrix and vector operations
Collection #3: Chapters 5 and 6: Random number generators, series approximations

Price per collection: \$14.95 Cassette/\$18.95 Diskette
All three collections are available for \$39.95 (three cassettes) and \$49.95 (three diskettes).
Because the text is a vital part of the documentation, BASIC Scientific Subroutines, Volume I is available from DYNACOMP for \$19.95 plus 75¢ postage and handling.

ROOTS (Available for all computers) Price: \$9.95 Cassette/\$13.95 Diskette
In a nutshell, ROOTS simultaneously determines all the zeroes of a polynomial having real coefficients. There is no limit on the degree of the polynomial, and because the procedure is iterative, the accuracy is generally very good. Numerical guesses are required as input, and the calculated roots are substituted back into the polynomial and the residuals displayed.

Ordering Information

All orders are processed and shipped postpaid within 48 hours. Please enclose payment with order along with computer information. If paying by VISA or MasterCard, include all numbers on card. For orders outside North America add 10% for shipping and handling.

Add \$2.50 to diskette price for 8" floppy disk (IBM format soft sector, CP/M, Microsoft BASIC)

*TRS-80 diskettes are not supplied with DOS or BASIC.

Deduct 10% when ordering 3 or more programs.

Ask for DYNACOMP programs at your local software dealer. Write for detailed descriptions of these and other programs from DYNACOMP.

COMPUTEX
MICROCOMPUTER SYSTEMS
5710 Drexel, Chicago, IL 60637

Even more useful (and amazing) is *autolink*. Autolink allows Super-Text to find and replace across an unlimited number of files. This action can occur in forward, backward, or even circular directions. Simply enclose the next file in colon symbols, place it at the end of the file (or the beginning, for a backward or circular link), and set the autolink flag. Any further find or replace command automatically searches the current file, loads the next, and searches it as well. Needless to say, this is a powerful feature that is unavailable on some of the big word processors.

Another feature that is neglected by some of the larger manufacturers is the split-screen mode. It is fascinating to see such a sophisticated feature in a word processor for a microcomputer. However, we wondered about the value of this feature. What can it be used for? In any case, it exists in Super-Text, and if you *can* use it—so much the better. We suspect it has only dazzle value.

In addition to Super-Text's excellent editing, there is a math mode that performs as a four-function calculator for columnar and embedded numerical data. It features an accumulator with up to fifteen-digit significance, and a decimal point that can be set by the operator. This calculator also adds up columns—even across screens. Once sums are in the accumulator, they can be easily inserted in the text, and even automatically aligned on decimal points.

The printouts look clean and professional, which is dependent, in part, on the printer you use. We used a Centronics 737, which is a "smart" (microprocessor-controlled) printer that looks good even though it is a dot-matrix printer. The printer can do many things by itself, and this is where the adaptability of Super-Text becomes a factor. Right justification is performed by space insertion, and it has the appearance of being evenly proportioned since Super-Text seems to place spaces after punctuation first, and then randomly across the line. Super-Text does not perform true proportional spacing, but the Centronics 737 does this automati-

cally with a proportional type font.

The Centronics responds to certain control characters that are sent to it to control particular features, such as underlining, choice of type font, super-/subscripting, and elongation of text (any type font may be printed as double-width characters). While Super-Text cannot directly control these printer functions, it allows six control characters which can be user-defined. (Four of these are configured for Diablo printers.) Some technical knowledge is required to redefine these control characters, but step-by-step instructions lead you through the process.

Although you can add an assembly-language printer driver to Super-Text, it is usually unnecessary. The first time you use Super-Text, you should configure it for your printer; this data is then saved on disk, and you should never again have to change your printer configuration (unless you get a different printer). The formatting parameters given at configuration time can be easily changed within the text.

Super-Text can use continuous form or single-sheet paper. It is difficult, however, to change back and forth, since you must reconfigure the printer every time that you switch. The operator can stop and start a printout at any time by the touch of a key. Page numbers can be suppressed, and made relative to the beginning of a chapter with the insertion of a control character. Page numbers can also be moved around the page for maximum flexibility. There is no provision that automatically locates the proper line for footnotes. The operator must count up lines for proper placement.

Human engineering is a weak point with Super-Text. The program does provide excellent prompts when necessary, including warnings for dangerous commands (eg: "PRESS # TO DELETE—" for deleting the entire text buffer) and multiple keystrokes to avoid accidental deletion. The problem, however, is that a lot of the control characters are not mnemonic. Also, multiple keystrokes for simple operations abound in Super-Text.

Vista

Model V1000

... Looking Out For You.

Eight Inch Floppy Disk Drive Subsystem Model V1000

The V1000, Vista's sophisticated new disk drive subsystem, sets new standards for ease of access and use. Its innovative design permits disk drives to be mounted or removed quickly and easily for system reconfiguration or servicing.

Features:

- Deluxe chassis with internal slide allows easy access.
- Storage capacity from 250 kilobytes to 2.5 megabytes.

- Desk or rack mountable.
- Accommodates both single-sided and double-sided drives.
- Industrial quality cabinet with die cast front bezel.
- Drives pull out for easy service and maintenance.

Prices:

Cabinet with (2) single sided drives w/power supply	..	\$1595.00
Cabinet with (2) double sided drives w/power supply	..	\$2295.00
Cabinet w/power supply	\$ 495.00

Dealer Inquiries Call Toll Free (800) 854-8017

Circle 381 on Inquiry card.

(This problem can be avoided, as demonstrated by Write-On!, another word processor designed for Apple II.) Some functions can be "undone" by using the escape key, but since most of the action takes place instantly, it is difficult to undo these commands. This is not the fault of Super-Text.

Text can be easily recovered from a "crash." If you find yourself in the Apple II monitor (denoted by an asterisk at the beginning of the line), simply type "3D0G", hit the return key, and then "CALL 4096", followed by the return key. You are placed back in Super-Text! We have yet to enter a file that exceeds the capacity

of the text buffer in Super-Text, so we don't know what happens when it fills up. The manual states that the processor will warn you when the buffer is almost filled.

Super-Text appears to use its own disk operating system, but it does use BLOAD and BSAVE to load and save text files. These operations are quick and easy. The fact that Super-Text can't be copied is probably the biggest problem. Perhaps Muse has realized how inconvenient this is, because it has provided two disks of the program. We understand its reluctance to put a copyable program on the market, but we feel that there are other ways to avoid piracy. One solu-

tion is to create a disk that can be copied a limited number of times but that produces uncopyable copies. In any event, there is a replacement policy, but there is also a \$10 media replacement charge.

Super-Text documentation comes in the form of an instruction manual. As a teaching tool, this manual is insufficient. The features are explained well, and some are supplemented with examples from the Super-Text disk. However, no quick reference card is provided, and it is sorely needed. The commands summarized at the end of each chapter explain the modes, but this is not enough, since you must leaf through the manual

until you have memorized all of the commands. There are no listings of the program, but as it can't be modified this makes little difference. In all fairness, the program provides for any modification you might want to make, so listings are unnecessary.

Super-Text is a very good word-processing program, and it generally works very well, especially after the user has adapted to the processor's particular methods. We won't give numerical ratings, as too much depends on the user's needs, but we'll give you a hint. We prepared part of this article with the Super-Text word processor.

Write-On!

Write-On!, like Super-Text, varies little between versions. The additional features of Write-On! II include preset script margins, personalized form letter capabilities using data files, data-file editing and input, and a system for preformatting text files for the printer. Write-On! II can also convert other files into data files.

Write-On! (from Rainbow Computing) is, for the most part, written in BASIC, and it lacks the speed of Super-Text or the Datacope Scribe. Therefore, it is almost a necessity to preformat text files for the printer. Unlike Super-Text, however, the added features are worth the price: in fact, the ability to print personalized form letters justifies the expense.

The following comments apply to both versions of Write-On!, unless otherwise noted.

Write-On! is a *super* word processor, but that name was already taken. Although it lacks some of the flexibility of the other word processors, it provides a full range of commands to process text.

Write-On! supports display of lowercase letters through the use of the Paymar lowercase adapter. It would appear that Mr Paymar and his adapter have become a standard with Apple. [Paymar had the field to himself for some time, but other companies (particularly Lazer Systems) are also producing lowercase products for the Apple II....GW] The shift key can be enabled by modifying

the keyboard, as mentioned above, but Rainbow Computing does not provide the wire—just the instructions. Without the shift modification, Write-On! uses reverse video and the ESC (escape) key to denote a capital letter. The shift lock is enabled by hitting the ESC key twice.

Write-On! does not support an 80-column board, and since it does its formatting when it prints out, there is no provision for viewing a text file in its final form on the screen. There is a feature in Write-On! II that allows print image files to be saved on disk, but the main purpose of these files is

AIM 65. The professional's microcomputer.

Printer, display, full keyboard. Under \$500.00.

For professional learning, designing and work, Rockwell's AIM 65 microcomputer gives you an easy, inexpensive head start.

- 20-column printer and display
- Dual cassette, TTY and general purpose I/Os
- R6502 NMOS microprocessor

- System expansion bus
- Read/write RAM memory
- Prom/ROM expansion sockets
- Self-prompt interactive monitor firmware
- Terminal-style keyboard
- Options include:
 - Prom Programmer module
 - RM 65 standard modules and card cages

For more on AIM 65 and how you can develop programs in assembly language, BASIC, PL/65 or FORTH, write Rockwell International, Electronic Devices Division RC55, P.O. Box 3669, Anaheim, CA 92803. For location of nearest distributor or dealer call 800-854-8099 (in California 800-422-4230).

Rockwell International
...where science gets down to business

to speed up output to the printer. (The files display gibberish when loaded and viewed on the Apple screen.)

The processor uses the wraparound technique to divide words, so touch typists can enter text quickly and easily. Unfortunately, there is no provision for hyphenation. (This seems to be the rule rather than the exception in word processors for microcomputers.) Write-On! uses control symbols embedded in the text to control tabs, text width, margins, page numbering, text centering, and paragraph indentation. These symbols take the form of "backslash-some characters-backslash" and they are also highlighted on the screen.

Write-On! will accept files not written by itself. Understandably, the process is slower than loading its own files, but the feature does exist. After we tried this command, we found that the files had to be text files in thirteen-sector format. The files that Super-Text saved would not even show up with the CATALOG com-

mand because Super-Text uses BLOAD to save its files. The ability to edit previously created text files is an important consideration when you convert from one word processor to another.

Write-On! performs its editing chores with ease and speed. The processor is line-oriented, and although I feel it is more difficult to work with, this is largely a matter of personal preference. An asterisk appears to the left of the line that is currently operating. The replace and find commands are facilitated by machine code, so they are even quicker. Blocks of text can be moved, copied, deleted, or saved easily. Write-On! does not have an autolink command for editing, so you cannot edit across files (as you can with Super-Text) but it does have a merge command similar to that in Datacop's Scribe. Text from a disk file can be inserted anywhere in the text that you are currently editing. Overall, the editing commands are easy to learn and use.

The standard Apple DOS (disk

operating system) is used. However, text files are loaded and saved using BLOAD and BSAVE, which reduces waiting time considerably. The saving and loading commands are clear and understandable, and have prompts that lead the user through the process. If you are a programmer, you can modify this function quite easily, because Write-On! is completely modifiable and copyable. There are some machine-language subroutines for *find* and *replace* functions, but those subroutines work well so there is little need to change them. The program runs in 48 K-byte machines only, but there is adequate room for lengthy files. The manual doesn't tell you what happens if the text buffer fills up, but we never encountered that problem.

There does appear to be a problem where output is concerned: there is no provision for a machine-language driver (sometimes used to drive a nonstandard printer). When initially configured, Write-On! only asks what slot your printer is in. In addi-

MX80/MX70 FRICTION FEED

HERE AT LAST! A friction feed kit for your EPSON MX80/70. The kit allows the user to convert his Epson printer to a friction feed and pin feed mechanism.

The friction feed will accept single sheets of your letterhead, or multiple copy forms such as invoices with up to 4 part carbon copies.

The pin feed replaces the adjustable sprocket mechanism. It allows use of 9½" wide continuous fanfold paper which is an industry standard size.

No drilling required. Installation takes about 15 minutes. All parts are included with easy to follow instructions.

tion, it is not very adaptable to particular features of different printers. Although Write-On! has several features such as underlining and bold-face, it needs some user-defined control characters because it does not provide for such conditions as different type fonts, super-/subscripting, different color ribbons, or proportional spacing. It will justify to the right margin, and it does a good job of it. The text doesn't look thin in any particular spot.

Write-On! changes easily from sheet to continuous form. Page numbers can be moved to any position on the page, and numbering can be suppressed. While we were investigating page numbering, we encountered a mystery: Write-On! only allows an absolute page number, yet the manual, which was written with Write-On!, has chapter-relative page numbers (eg: 3 - 4). It seems there is a command that allows a string to be printed to the left or the right of the page number. The chapter must have been inserted as that string and then

changed at the beginning of every chapter. This is still mysterious, however, because the manual makes no mention of it. (Except for the EasyWriter Professional word processor, none of these word processors have provisions for footnoting, and Write-On! is no exception.) Write-On! also provides predefined titles. You can define up to twenty titles, which will appear at the beginning of each page.

Write-On! II even provides for form letters using data files. You can build a file of personal or company names, or addresses, and then insert them into a form letter upon printout. This is a tremendously powerful and useful feature (especially for the price). As if this is not enough, Rainbow includes a data-file converter program that takes files from mailing lists and general ledgers and automatically converts them to the proper data-file format. If you want to insert data while your text is printing, Write-On! will accept input from the keyboard and print it where you have

embedded the special control character. It even provides for a string that will print on the screen to prompt for the proper information. These are undoubtedly the most powerful features found in a microcomputer-based word processor.

The human engineering in Write-On! is superb. All of the commands are mnemonic and provoke little confusion. Most of the commands use only one keystroke, thus simplifying matters even further. Although the print module is separate from the editor program, its use is simplified by prompts and a menu selection. All of the editing and printing commands are prompted, and error traps are included so that it is difficult to inadvertently destroy several hours of typing.

Along with the excellent human engineering, Write-On! provides superlative documentation. This documentation leads the user by the hand; explanations of the various features are clear and concise, and even the complex operations make sense the

Visual Magic...

While *Inversions* delights the eye and enchants the mind, *Digital Harmony* lays the foundation for a whole new field of audiovisual art made possible by microcomputers. Both books pioneer new forms.

AVAILABLE FALL 1981

DIGITAL HARMONY

by John Whitney

A new synthesis of sight and sound

Digital Harmony lays the foundation for the whole new field of audio-visual art made possible by microcomputers. John Whitney, a pioneer of the special effects technology used in STAR WARS and 2001: A SPACE ODYSSEY, explains the special union of computer graphics and music. His computer-generated visual art graphically depicts the laws of harmonic motion common to all music.

Digital Harmony includes a complete description of Whitney's computer, peripherals, and film techniques. Colorful illustrations are included, as well as the program listings that generated them. The descriptions are sufficient for anyone to begin to explore this new territory as a composer and computer experimenter - transforming the small computer into an ideal instrument for creating compositions in aural and visual art.

John Whitney is on the Faculty in the Department of Art at the University of California, Los Angeles.

INVERSIONS: A Catalogue of Calligraphic Cartwheels

by Scott Kim
Foreword by Douglas Hofstadter
Backward by Jef Raskin

Surprising symmetries in design and letterforms

Illusion . . . calligraphy . . . visual magic - Scott Kim's new book, Inversions, delights the eye and enchants the mind. Filled with intriguing designs, words that read the same right-side up and upside down, words within words, and unexpected symmetries, these compositions create a fresh way to look at the alphabet. The text includes the visual principles of symmetry, lettering, and problem solving that are basic to these images. The author also draws parallels to related exercises in perception in such diverse areas as art, music, word play, and mathematics. Scott Kim's original inversion designs first appeared in *Omni* magazine, inspiring an overwhelming reader response. An irresistible challenge, invertible writing appeals to everyone who loves beauty in mathematics and design.

Scott Kim is a doctoral student in Computer Science at Stanford University and is a concert pianist and composer.

BRAINS, BEHAVIOR, AND ROBOTICS

by James S. Albus

Robotics design and applications

This computer-oriented guide explores how the brain functions primarily as a computer device for generating and controlling behavior. The author assesses behavior as a product of three hierarchies of computing modules:

- memory modules
- behavior-generating modules
- sensory-processing modules

A section on artificial intelligence ties this hierarchical model to vital computer science techniques such as planning, problem-solving, machine vision, natural language understanding and knowledge representation. A closing section on robotics discusses the design considerations in constructing a robot control system fashioned after this model of the brain, and explores the current and potential use of robots in our environment.

Dr. James S. Albus is Project Manager with the National Bureau of Standards.

THE BRAINS OF MEN AND MACHINES

by Ernest W. Kent

Human models for computer design

When the "Brains of Men and Machines" series of articles first appeared in *BYTE* magazine, the response was immediate and enthusiastic. Now Ernest W. Kent has expanded his ideas about the brain into a full-length book. As researchers begin to unravel the mysteries of the brain's chemical, electrical, and synaptic circuitry, their findings are becoming immediately applicable to advances in robotic behavior and computer design. The Brains of Men and Machines "dissects" the brain to provide new insights into computer design and artificial intelligence.

It is one of the rare books that transcends disciplinary boundaries. In it the ever-increasing relationship between man and machine is freshly examined - a relationship, Professor Kent concludes, that is today being reexamined in the light of man's own neurological self-image.

Dr. Ernest W. Kent is a Professor of Physiological Psychology and Psychopharmacology at the University of Illinois at the Chicago Circle Campus.

BASIC SCIENTIFIC SUBROUTINES, VOLUMES 1 AND 2

by Fred Ruckdeschel

Valuable programs for professional and hobbyist

Designed for the engineer, scientist, experimenter, and student, this series presents a complete scientific subroutine package in BASIC.

- Volume 1 covers plotting, complex variables, vector and matrix operation, random number generation, and series approximations.
- Volume 2 continues with least-squares approximation, special polynomial functions, approximating techniques, optimization, roots of functions, interpolation, differentiation, integration, and digital filtering.

These volumes feature routines written in both standard Microsoft and North Star BASIC, extensive appendices, and subroutine cross-references.

Dr. Fred Ruckdeschel is a Principal Scientist with Dynacomp, Inc.

THE BYTE BOOK OF PASCAL

Blaise W. Liffick, Editor

A powerful, structured language

Based on articles, language forums, and letters from BYTE magazine, this work is a valuable software resource. Pascal continues to be popular as a structured programming language. Written for both potential and established users, this book introduces the Pascal language and examines its merits and possible implementations. Featured are two versions of a Pascal compiler, one written in BASIC and the other in 8080 assembly language; a p-code interpreter written in both Pascal and 8080 assembly language; a chess-playing program; and an APL interpreter.

THREADED INTERPRETIVE LANGUAGES

by Ronald Loeliger

How to implement FORTH on your Z80

Threaded languages (such as FORTH) are compact, giving the speed of assembly language with the programming ease of BASIC. They combine features found in no other programming languages. This book develops an interactive, extensible language with specific routines for the Zilog Z80 microprocessor. With the core interpreter, assembler, and data type defining words covered in the text, it is possible to design and implement programs for almost any application and equivalent routines for different processors.

Ron Loeliger is a Senior Analyst with Intermetrics, Inc.

BEGINNER'S GUIDE FOR THE UCSD PASCAL SYSTEM

by Kenneth L. Bowles

The most popular Pascal version explained by its creator

Written by the originator of UCSD Pascal System, this informative book is an orientation guide to the UCSD Pascal System. For the novice, this book steps through the System, bringing the user to a sophisticated level of expertise. Once familiar with the System, the reader will find the guide an invaluable reference tool for creating advanced applications. The package offers programs which may be run without alteration on:

- DEC PDP-11 or General Automation minicomputers
- Western Digital Microengines
- 8080, 8085, Z80, 6502, 6800, 9900 or AM-100 based microcomputers (including the popular Apple II and Radio Shack TRS-80 microcomputers)

Dr. Kenneth L. Bowles is Director of the Institute for Information Systems, University of California, San Diego.

YOU JUST BOUGHT A PERSONAL WHAT?

by Thomas Dwyer and Margot Critchfield

A Structured Approach to Creative Programming

Intended for both the novice programmer and the experienced computer enthusiast, this book presents practical ideas for personal computer use at home or at work.

Its approach is especially suitable for educational purposes. Written by the leading contributors of computer education material, this book is an entertaining and resourceful tool. There are over 60 ready-to-use programs written in Microsoft and Level II BASIC for the TRS-80 in the areas of educational games, financial record keeping, business transactions, disk-based files, and word processing.

Dr. Thomas Dwyer is a Professor of Computer Science at the University of Pittsburgh.

Margot Critchfield is a doctoral student in Foundations in Education at the University of Pittsburgh.

BEYOND GAMES: SYSTEM SOFTWARE FOR YOUR 6502 PERSONAL COMPUTER

by Kenneth Skier

Creating programs for the Apple, Atari, Challenger and PET computers

At last, a complete programming guidebook for owners of personal computers utilizing the 6502 microprocessor. A self-contained course in structures programming and top-down design, this book presents a powerful set of tools for building an extended monitor, disassembler, hexadecimal dump routine, and text editor programs. Programs are thoroughly explained, with clear instructions for modifications.

Kenneth Skier is a Systems Programmer for Wang Laboratories, Inc., and a Lecturer at MIT.

CIARCIA'S CIRCUIT CELLAR

by Steve Ciarcia

Practical uses for home computers

Imaginative and practical, Ciarcia's Circuit Cellar details a variety of microcomputer projects. A collection of the best articles from the popular series in BYTE magazine, this volume includes

- D/A conversion
- Programming EPROMS
- AC remote-controlled appliances
- digitized speech
- touch input video display

Complete instructions are given on how to construct each project. With amusing anecdotes and an easy-going style, Ciarcia presents his material in such a manner that even a neophyte need not be afraid of it.

CIARCIA'S CIRCUIT CELLAR, VOLUME II

by Steve Ciarcia

More practical uses for home computers

Composed of popular articles from BYTE magazine, this volume tells how microcomputers can be uniquely interfaced to our environment. Projects include

- building a computer controlled home-security system
- computerizing appliances
- transmitting digital information over a beam of light
- building the Intel 8086 microprocessor system design kit
- input-output expansion for the TRS-80

MICRO- COMPUTER STRUCTURES

by Henry D'Angelo

Digital Electronics, Logic Design, and Computer Architecture

Today, there is an increasing demand for computer users who are not only well-versed in software, but who can also maintain, modify, and design their own hardware systems.

This text introduces computer users with little or no background in digital hardware to the basic computer structures used in microcomputer design and microcomputer interfacing. Helpful examples and end-of-chapter exercises further illustrate the various concepts presented, and a detailed bibliography provides additional reading opportunities. As a resource and textbook, it will assist

- programmers and systems analysts
- engineers and scientists
- managers
- students

Detailed Instructor's Manual also available.

Dr. Henry D'Angelo is the Associate Dean of the College of Engineering and Professor of Manufacturing Engineering at Boston University.

BYTE Books' reputation is based on providing technically accurate, useful, and timely information. Established on the same principle as *BYTE* magazine, BYTE Book's evolved in response to the rapidly expanding audience of home and business computer users. Computer professionals and enthusiastic newcomers need to keep pace with this unabated growth. This selection of BYTE books can expand your library of knowledge and expertise.

BUILD YOUR OWN Z80 COMPUTER

by Steve Ciarcia

Every step spelled out for do-it-yourself buffs

For the engineer, computer technician, student, and anyone interested in building a computer rather than buying one, this practical guide shows how to build a working computer based on the Zilog Z80 microprocessor. Each computer subsystem is fully explained and supported by proven design and testing information. The description focuses on a basic single-board microcomputer containing

- easy expansion to include a video terminal
- a 1 K-byte operating system
- serial and parallel ports
- hexadecimal display
- audio cassette mass storage

Readers can modify the system to meet personal needs.

Steve Ciarcia is a Computer Consultant, Electrical Engineer, and author of "Ask Byte" and "Ciarcia's Circuit Cellar" columns in *BYTE* magazine.

MINDSTORMING

In most contemporary educational situations where children come into contact with computers the computer is used to put children through their paces, to provide exercises of an appropriate level of difficulty, to provide feedback, and to dispense information. The computer programming the child. In the LOGO environment the relationship is reversed: The child, even at preschool ages, is in control: The child programs the computer. And in teaching the computer how to think, children embark on an exploration about how they themselves think. Thinking about thinking turns the child into an epistemologist, an experience not shared by most adults.

Logo Computer Systems, Inc. is a new company that has been formed to develop and disseminate the LOGO methodology. During the next few months it will be announcing a line of products: hardware, software, written materials, training services.

Text continued from page 190:

first time. Examples, both in the manual and in text-file form on the reverse side of the disk, accompany the tutorial narrative. Finally, there is a quick reference sheet near the back of the manual that explains every command (our version is on 14- by 11-inch printout paper, but Rainbow plans to reduce it to an 8½- by 11-inch card).

The manual also includes a question and answer sheet that tries to anticipate any problems, and a reader service card on which you can describe any problem not covered by the question and answer sheet and send to Rainbow for an answer. If you'd rather not wait for the return of the reader service card, you can call Rainbow, and they will try to solve your problem over the phone. No listings of the program are provided, but this is unnecessary as you can load and list it yourself. The program is not a marvel of documented programming, but then BASIC is not known for its accessibility.

Write-On! is amazingly error-free, and it ran the first time we put it on the computer. It can also be easily converted to the new 16-sector format. One of us thinks that Write-On! is his choice of all the word processors that we reviewed. The only reason we didn't use it to prepare this review is that it won't support all of the features of the Centronics 737, which was the printer we used for our final copy.

The Datacope Scribe

The Datacope Scribe (from Datacope) is the only word processor we reviewed that *requires* the Dan Paymar lowercase adapter (which provides true lowercase and uppercase letters on the monitor's screen). One would hope that use of the adapter would eliminate use of inverse characters. However, this word processor uses inverse characters to indicate the various editing functions, such as centering, underline, or new page or paragraph. All of the word processors we reviewed use inverse characters for various reasons (eg: special character representing new paragraph). Inverse characters and

special characters are items that we will have to live with, at least for now. The Datacope Scribe does, however, provide a feature that allows us to view the text without all the special control characters; this will be described later in the review.

The Datacope Scribe utilizes two techniques found in several of the word processors for the Apple II: use of the ESC key for shift and use of Control-A for shift lock. The word processor accommodates touch typists and eliminates the need to worry about margins. Hyphenation is indicated by a hyphen when you execute the "implementation" command (the command that causes the word processor to execute all the other commands you have given it). Scribe then prompts for your approval (press RETURN). If you wish to change the location of the hyphen, press either of

The Datacope Scribe Is the only word processor described that requires the Dan Paymar lowercase adapter.

the arrow keys until the hyphen is where you want it, then press RETURN.

Tabs are input through the use of control-Y. Each time a control-Y is pressed, an inverse ^ appears on the screen. This prints the next character at the next tab position (as given by the values in the tab position table). The word processor supports line centering, underlining and indentation.

The Datacope Scribe has the ability to specify, during input, locations where keyboard input is desired during printing. This feature is nice for adding personal touches to form letters or addresses to letters. Text files on a disk other than the one being worked on must be appended to the current file (ie: they cannot be inserted into the middle of the file). This requires that you preplan in detail before you enter text.

Editing is accomplished with cursor control and additional support from buffer (text-blocks) movements. The Datacope Scribe includes on-line reference guides that will assist the novice during entry and edit modes. These guides provide information on the various control keys and functions. By using the customize program, these guides may be removed from the word processor to make room for more text.

After the text has been entered and edited, the define mode should be

MICROCOMPUTER REFERENCE HANDBOOK

The **MICROCOMPUTER REFERENCE HANDBOOK** reviews in detail more than 130 microcomputer systems from over 50 major microcomputer suppliers, including some of the latest Japanese manufacturers. It is designed to aid both first time and experienced computer users in choosing a single-board microcomputer or microcomputer system to suit their application. It is presented in four parts.

PART I. Chapters 1 to 3 include a wealth of useful information on microcomputer theory including peripheral and software capability. Succeeding Chapters provide additional microcomputer information under the following headings: *BASIC Language Summary; Guidelines for the Selection of Microcomputers in Commercial Applications; Microcomputers and Word Processing, Big Future for Desktop/Personal Computers* (containing comments by IDC, a leading industry information resource); *Future Trends in Microprocessing and Microcomputing; Communications and Networking with Microcomputers; Microcomputers in Education; and Microcomputing For The Home Hobbyist.*

PART II. Covers a range of microcomputer software from independent vendors. Products discussed are broken down into the five major system types: CP/M-based; Apple Systems; Commodore Systems; Radio Shack TRS-80 Systems; and the 6800-based models. The different programs described include operating systems, high-level languages, utilities and a wide variety of application packages.

PART III. Provides a 2 to 5 page summary on more than 130 different microcomputers and microcomputer systems from over 50 suppliers. These summaries describe hardware, software, peripherals, pricing and head office location. The different microcomputer suppliers covered include, in manufacturer order:

• APF • AI Electronics Corp. • Archives • Alpha Microsystems • Altos • Apple • Atari • CADO • California Computer Systems • Commodore • Compucolor • Compucorp • Cromemco • Data General • Datapoint • Diablo Systems • Digilog • Digital Equipment • Durango • Exidy • Findex • Hewlett-Packard • IBM • IMS • Intel • Intelligent Systems • Intertec • MicroDasy's Millie • Micro V Corp. • Micromation • Mitsubishi • Motorola • Panasonic • QASAR • National Semiconductor • North Star • Ohio Scientific • Onyx • Pertec • Radio Shack • Sinclair ZX80 • Smoke Signal • SORD • SWTPC • Tektronix • Texas Instruments • Vector Graphic • Wang • Zenith • Zilog ... plus others.

PART IV. Includes a summary on a selection of terminals and printers for microcomputers. Both visual display and keyboard printing terminals are discussed as well as a number of low and high-speed character printers.

MICROCOMPUTER REFERENCE HANDBOOK

If you are interested in keeping abreast of this very important segment of the market or are planning to purchase a microcomputer for home, office or factory use then this Handbook is of vital interest to you. For just \$25 (or \$20 with introductory offer) it can save you up to six months of your own research, time and effort. The publication is printed 10.75" x 8.2" and contains over 250 pages. This publication will be available in May.

I would like to order the **MICROCOMPUTER REFERENCE HANDBOOK**. The cost of the HANDBOOK is normally \$25, plus \$2 postage and handling.

Special Introductory Offer (now extended to June 30th) is \$20, plus \$2 postage and handling.

used to define the main format of the final printed text product. This feature allows you to set several parameters associated with printed output: left and right margin positions, number of lines per page, tab positions, single or double spacing between paragraphs and lines, justified right margin (yes/no), and page numbering (yes/no). Up to eight tab settings are provided. When you finish defining the format, use the implement command to prepare for viewing and/or printing. The view command enters the view mode, which displays the text on the monitor in the final output form. Of course, the view mode is limited by the Apple's 40-column display.

The Datacope Scribe is available in both DOS 3.2 and 3.3 versions, and the DOS 3.2 version will work on a DOS 3.3 Apple if you use the BASICS floppy disk first. The Datacope Scribe cannot be copied with standard copy programs. Should you develop disk problems, the processor can be replaced up to ninety days after purchase, with proof of purchase.

EasyWriter

The EasyWriter and EasyWriter Professional word processors have much in common. Anyone who changes to the Professional version should have little difficulty making the transition. Unlike Super-Text and Write-On!, however, there is a noticeable change between EasyWriter and EasyWriter Professional. EasyWriter uses Apple's 40-column display, while the Professional version uses any one of the three most popular 80-column video cards (M & R Sup'R'Terminal, Videx, or DoubleVision). This difference may be the deciding factor when you decide which version to buy. The serious user, most likely a professional, will probably purchase the video card and EasyWriter Professional and write off the cost as a business investment. The home user, unless she or he already has the video card, will purchase the 40-column version.

Both versions begin by offering a menu of activities. The Professional

version begins with the disk commands, whereas the original version displays the menu for the editor. The Professional version has added the ability to append disk files during input, which is not possible with the 40-column EasyWriter. The ability to append "glossary"-type files is just one example of the changes made to EasyWriter between versions. Input is much easier with the Professional version, because the 80-column display uses true uppercase and lowercase characters. The original EasyWriter uses the standard inverse characters for uppercase characters (as do most of the other word processors for the Apple). One nice feature about

LNW80

- BARE PRINTED CIRCUIT BOARD & MANUAL \$89.95

The LNW80 - A high-speed color computer totally compatible with the TRS-80*. The LNW80 gives you the edge in satisfying your computation needs in business, scientific and personal computation. With performance of 4 MHz, Z80A CPU, you'll achieve performance of over twice the processing speed of a TRS-80*. This means you'll get the performance that is comparable to the most expensive microcomputer with the compatibility to the world's most popular computer (TRS-80*) resulting in the widest software base.

- FEATURES:
- TRS-80 Model 1 Level II Software Compatible
 - High Resolution Graphics
 - RGB Output - 384 x 192 in 8 Colors
 - NTSC Video or RF MOD - 128 x 192 in 8 Colors
 - Black and White - 480 x 192
 - 4 MHz CPU
 - 500/1000 Baud Cassette
 - Upper and Lower Case
 - 16K Bytes RAM, 12K Bytes ROM
 - Solder Masked and Silkscreened

LNW SYSTEM EXPANSION

- BARE PRINTED CIRCUIT BOARD AND MANUAL \$69.95
 WITH GOLD CONNECTORS \$84.95

The System Expansion will allow you to expand your LNW80, TRS-80*, or PMC-80** to a complete computer system that is still totally software compatible with the TRS-80* Model 1 Level II.

- FEATURES:
- 32K Bytes Memory
 - 5" Floppy Controller
 - Serial RS232 120ma I/O
 - Parallel Printer
 - Real Time Clock
 - Screen Printer Bus
 - On Board Power Supply
 - Solder Masked and Silkscreened

KEYBOARD

LNW80 KEYBOARD KIT \$84.95

The Keyboard Kit contains a 63 key plus a 10 key, P.C. board, and remaining components.

LNDbabler

- Assembled and Tested \$149.00

Double-density disk storage for the LNW Research's "System Expansion" or the Tandy's "Expansion Interface". The LNDbabler™ is totally software compatible with any double density software generated for the Percom's Doubler***. The LNDbabler™ provides the following outstanding features.

- Store up to 350K bytes on a single 5" disk
- Single and double density data separation
- Precision write precompensation circuit
- Software switch between single and double density
- Hardware override into single density only
- Easy plug in installation requiring no etch cuts, jumpers or soldering
- 35, 40, 77, 80 track 5" disk operation
- 120 day parts and labor Warranty

*** Doubler is a product of Percom Data Company, Inc.

DOS PLUS 3.2D \$95.00

Micro Systems software's double density disk operating system. This operating system contains all the outstanding features of a well developed DOS, with ease in useability.

LNW DATA SEPARATOR

- Assembled and Tested \$17.95

The LNW Data Separator provides you with a reliable and inexpensive means of solving your disk data read error problems for your 5" single density drives. Compatible with both the LNW System Expansion and Tandy's Expansion Interface. Some soldering is required.

CASE

LNW80 CASE \$84.95

The streamline design of this metal case will house the LNW80, LNW System Expansion, LNW80 Keyboard, power supply and fan, LNDbabler™, or LNW Data Separator. This kit includes all the hardware to mount all of the above. Add \$12.00 for shipping

this display is that only the letter displayed in inverse is made uppercase.

EasyWriter displays the least amount of extraneous information with the text of all the word processors covered in this review. Shift is accomplished by pressing the ESC key once; twice for shift lock. The Professional version also uses the ESC key, but allows for the wire between the shift key and 16-pin game I/O port (the game paddle connector) for easier use by a touch typist.

The method of ending paragraphs has also been improved. The original EasyWriter uses two shift-Ms, whereas the Professional uses only a return. The original version used one shift-M to end a line. The Professional's reference manual warns the typist to use the return only to start new paragraphs.

Paragraphs may be formatted to automatically indent through the use of special embedded commands, which are placed between text lines. These commands may appear more than once, thus providing the opportunity

to change indentation formats several times in any document. Both versions of EasyWriter support the centering of lines of text, but the method of implementation varies. The original version uses the em-

EasyWriter has the least amount of extraneous information displayed with text.

bedded command technique, while the Professional uses a special editing tool that will be described later.

The 40-column version does not provide a method for viewing the text in final form, but the Professional's 80-column display is the image of the output. And since it is the direct image, an added capability is provided to align text, both after input and prior to printing. Through the use of "additional commands" (which

have their own menu screen), the Professional version allows you to realign margins, center lines of text, set and reset tabs, and, for use with printers such as Qume, Diablo, and Spinwriter, vary spacing between letters.

The Professional EasyWriter can translate files from the original 40-column version for use with the 80-column display. Both versions use various control keys to scroll up or down by page or line. Left or right movement on any line is performed with the Apple's normal arrow keys.

Editing is a pleasure with either version. Global search and block movement of text is supported in both versions, but global replace is supported only in the Professional. After you have finished editing, output can be tailored to each document, or you can rely on the default values. The original version accomplishes tailoring with embedded commands; the Professional version uses the additional commands to realign text (as described above), as well as optional

S&M SYSTEMS, INC
P.O. Box 1225, 2 Washington Street, Haverhill, Ma. 01830

SPECIALISTS IN FULL SERVICE SYSTEMS

When Eight Is Not Enough: CP/M-86™ and CBASIC/86™

"In 1977 Compiler Systems, Inc. introduced CBASIC™ as a CP/M® programming language. It quickly became the most widely used BASIC dialect. Since then CBASIC has been adapted for use on systems supporting MP/M™ and TRSDOS."

"At Compiler Systems we learned the lessons of the past well. So well, that in the relatively short time we've been in the software business, we managed to make history ourselves. In fact, CBASIC is the standard for CP/M-based business systems."

— Gordon Eubanks, CSI president

Today CSI offers CBASIC/86 designed for 16-bit microcomputer-based systems running under CP/M-86. CBASIC/86, now available worldwide, is based on concepts first used by CBASIC including such business-oriented features as: BCD arithmetic with fourteen-digit precision; full format control of printed reports; random and sequential records of any length (not limited to 256 bytes); aids to structured design, i.e. multiple line functions and control structures as well as excellent file-handling and stringing capabilities.

But perhaps the best of CBASIC/86 becomes clear when you're using it. To learn more about CSI's commitment to support CBASIC/86 and CP/M-86 call (213) 355-1063 and discuss putting CBASIC/86 on your system.

Send this coupon today, we'll send details that go a long way toward answering your questions.

The Shining Star Bytes the Big Apple!

**MICROHOUSE NOW HAS WORDSTAR
FOR APPLE II AND TRS 80!**

**SIZZLING
SOFTWARE
SAVINGS!**

WORDSTAR Apple Version

Finally, the 'Mercedes-Benz' of Word Processing Systems comes configured for one of America's favorite micros. Has all the features of the Standard WORDSTAR. Requires Microsoft's CP/M card, Videx Videoterm 80 x 24 screen conversion card (or equivalent), and at least 48K RAM.

List Price: \$375.00

Microhouse Price: \$245.00/\$40.00

☐ MICRO-WSAPPL

MAILMERGE for Apple

Custom type letters to whole lists of people, create documents using already existing paragraphs, write stock letters using 'ask variables' to insert names and addresses for one-at-a-time use. One of the most useful options on the market today.

List Price: \$125.00

Microhouse Price: \$85.00/\$25.00

☐ MICRO-MMAPPL

WORDSTAR

For CP/M*-based systems other than Apple. Available for TRS80*.

List Price: \$495.00

Microhouse Price: \$322.00/\$40.00

☐ MICRO-WORDST

MAILMERGE

For CP/M*-based systems other than Apple.

List Price: \$150.00

Microhouse Price: \$110.00/\$25.00

☐ MICRO-MAILME

WORDSTAR CUSTOMIZATION

Package includes manual and diskette.

List Price: \$150.00

Microhouse Price: \$95.00

☐ MICRO-WSCUST

SUPERSORT I Apple Version

List Price: \$200.00

Microhouse Price: \$130.00/\$40.00

☐ MICRO-SSIAPP

SUPERSORT I

For CP/M*-based systems other than Apple. Can be used as a stand-alone program or can be linked to programs with a Microsoft format.

List Price: \$250.00

Microhouse Price: \$170.00/\$40.00

☐ MICRO-SUSOI

SUPERSORT II

Stand-alone-only version of Supersort I. For CP/M*-based systems other than Apple.

List Price: \$200.00

Microhouse Price: \$145.00/\$40.00

☐ MICRO-SUSOII

DATASTAR

List Price: \$350.00

Microhouse Price: \$245.00/\$40.00

☐ MICRO-DATAST

WORDMASTER

by MicroPro.

List Price: \$150.00

Microhouse Price: \$119.00/\$35.00

☐ MICRO-WORDMA

CBASIC 2

by Compiler Systems.

List Price: \$120.00

Microhouse Price: \$85.00/\$15.00

☐ COMPILE-CBASIC

BASIC 80

Interpreter (MBASIC) by Microsoft. Versions 5.2 and 4.51 included.

List Price: \$350.00

Microhouse Price: \$299.00/\$30.00

☐ MICRO-BASIC8

BASIC COMPILER

by Microsoft. Language compatible with MBASIC, but programs run 3-10 times faster. Includes MACRO80.

List Price: \$395.00

Microhouse Price: \$330.00/\$30.00

☐ MICRO-BASCOM

STACKWORKS FORTH

For Z80 or 8080 (specify). Includes source and assembler.

List Price: \$175.00

Microhouse Price: \$140.00/\$30.00

☐ SUPERS-FORTH

SSS FORTRAN w/RATFOR

Full ANSI '66 plus extensions. RATFOR compiles into Fortran: write structured code but keep the advantages of Fortran. Requires 32K.

List Price: \$325.00

Microhouse Price: \$280.00/\$35.00

☐ SUPERS-FTNRAT

TCS/Atlanta INTERACTIVE

ACCOUNTING SYSTEM

for small businesses. Ver. 5.0. Each package can be used alone or post automatically to the General Ledger. Compiled version (nosupport language req.) Price listed is per package. General Ledger, Accounts Receivable, Accounts Payable, and Payroll packages now available. Requires 48K RAM, 132 col. printer, 24 x 80 CRT, and CP/M*.

List Price: COMPARE AT \$530.00

Microhouse Price: \$79.00/\$25.00

☐ TCS-ACCTCM

ALL FOUR TCS PACKAGES (compiled)

List Price: Compare at \$530.00

Microhouse Price: \$269.00/\$90.00

☐ TCS-ALL4CM

Software Manual
& Manual/Only

☐ ORDER-NUMBER

embedded commands.

The provision for titling and numbering pages is one of the best we have seen for the Apple. The placement of titles and page numbers is limited only by your imagination.

Other advantages specific to EasyWriter Professional are suggestions and instructions for adding footnotes (the only word processor we reviewed that had such suggestions); capability of being linked to EasyMailer for processing of bulk mailings, and ability to transfer EasyWriter files over phone lines to other computers located anywhere in the world. (EasyMover and EasyMailer are separate programs and not part of EasyWriter. They can be obtained from Information Unlimited Software.)

Special printer characteristics are supported by both versions. Those printers that are capable of underlining, boldface printing, and super-/subscripting are conveniently accommodated.

EasyWriter's reference manual was input directly into an Addressograph Multigraph typesetting machine using the proportional spacing option. Even on a printer without proportional spacing, the text spacing is pleasing to the eye.

Many of the EasyWriter features are appealing from the human engineering aspect. Most of the commands on the menu are easy to remember and require only one key to invoke a command. The use of CTRL (control) keys is basically confined to cursor movements during editing.

Before it clears text or deletes files, EasyWriter requests verification: "ARE YOU SURE?" Insert operations can be confusing as to when the insertion mode is exited. (Datacope Scribe has probably done the best job of avoiding confusion on insert operations.)

EasyWriter manuals generally provide good, detailed explanations of the various features. Both manuals attempt to lead the user through the capabilities of the EasyWriter by presenting information that teaches its use and interlacing it with details of the various features.

Fit to be TIDE

OR
*how WE kept
our head
above water IN*
1812.

Freedom of the seas.

That's what the War of 1812 was all about.

But it would have been sink or swim for our Navy had Americans not bought \$11,000,000 worth of government securities to keep our flag upon the waves.

Back then, folks took stock in America by putting their money where their country was. To save the good old Navy.

Today, over 9½ million modern Americans still take stock in America by buying U.S. Savings Bonds.

When you join the Payroll Savings Plan, you help yourself to safe, automatic savings. And you help your country, too.

So buy U.S. Savings Bonds.

They'll keep your savings on an even keel.

Now E Bonds pay 6% interest when held to maturity of 5 years (4½% the first year). Interest is not subject to state or local income taxes, and federal tax may be deferred until redemption.

Table 1: Feature comparison of four popular word-processing programs for the Apple II.

Conclusions

Choosing a word processor is similar to deciding on a microcomputer. Each has special features (see table 1), and none of the products have all the features.

If you want a word processor that performs math operations, the Super-Text II program is for you. If you're looking for a word processor that you can modify, and you know only BASIC, then Write-On! should satisfy your requirements. If you already have one of the 80-column cards, perhaps you should choose the EasyWriter Professional version. If you are looking for a workhorse processor that will handle bulk mailings,

then the EasyWriter Professional linked with EasyMailer is also for you, although Super-Text may meet this demand, and, with some pushing, Write-On! could meet the lower end of these requirements. Datacope Scribe has some very nice features, and if you only wish to process text and can live without a find-and-replace feature, the processor will fulfill your needs.

About this time, you may be thinking, "This is a typical review that says all the products are great." Possibly this is true, but we speak with some experience as we used all of the processors while preparing this article. Each met our needs, and performed

basic text processing in less than an hour.

A few years ago, such power in a small package, and at this price, was only a dream. And even today, some of the larger systems don't have equivalent features. ■

MAROT ANNOUNCES THE FIRST COMPUTERS POWERFUL ENOUGH TO RELIEVE GROWING PAINS.

Sooner or later, your small business will look for a so-called "first" computer. And sooner or later, your small business will grow larger and need more computer capacity.

Fortunately, Marot Systems has anticipated your needs and offers two "first" computers that have the capacity to grow as large as you do.

Altos: upgradeable, portable and affordable.

Start out with a low cost multiuser Altos dual floppy based system with 208 K of RAM. It's perfect for inexpensive work stations or applications like accounting, word processing, mailing lists and more.

If you're already in need of more storage and greatly enhanced access speed, then look into the Altos 10Mb-58Mb hard disk systems. When combined with the standard 208 K of RAM, 6 serial I/O and 2 parallel ports, they become unusually

fast and powerful 4-user business or scientific systems.

All Altos systems are packaged with single board Z80 CPU, quality Shugart 8-inch disk drives, and options such as DMA (required for OASIS) floating point processors, and a cartridge tape back-up subsystem.

So as you grow, you just add onto your system. Without suffering the growing pains of eating the costs of your "first" computer.

Onyx: maximum integration in one sleek box.

The Onyx represents a new standard of quality and cost effectiveness in small business computers.

The 8-bit C8001/MU is an ideal multi-user system for business or word processing applications. It combines Z80 high speed processors, standard 128 K RAM, (expandable to 256 K), Winchester disk and integral cartridge tape drive in an efficient, compact package. And us-

Z80 is a trademark of Zilog, Inc.
C-BASIC II is a trademark of Compiler Systems
UNIX is a trademark of Western Electric Corporation

ing reentrant BASIC application programs, it allows up to 5 simultaneous operators.

When you need the power of a 16 bit computer, you want the C8002. It uses a special edition of Bell Laboratories UNIX operating system to accommodate up to 8 users involved in product development or executing application programs in C, COBOL, PASCAL or C-BASIC II.

You can also expand the RAM of the C8002 to 1 Mb and its disk capacity to over 300 Mb. So you get all the growing power you need. With none of the growing pains.

Marot: looking for good dealers for 2 great systems.

Marot, East Coast Distributor for Altos and Onyx, needs a few qualified dealers for these two hot items. If you're the great dealer we need, please contact us.

CBM™ 8000 SERIES BUSINESS COMPUTERS

The new Commodore 8000 series computers offer a wide screen display to show you up to 80-character lines of information. Text editing and report formatting are faster and easier with the new wide-screen display. The 8000 series also provides a resident Operating System with expanded functional capabilities. You can use BASIC on the 8000 computers in both interactive and program modes, with expanded commands and functions for arithmetic, editing, and disk file management. The CBM 8000 series computers are ideally suited for the computing needs of the business marketplace.

SCREEN

2000 character display, organized into twenty-five 80-column lines
64 ASCII, 64 graphic characters
3 x 8 dot matrix characters
Green phosphor screen
Brightness control
Line spacing: 1½ in Text Mode
1 in Graphics Mode

KEYBOARD

73-key typewriter style keyboard with graphic capabilities
Repeat key functional with all keys

MEMORY

CBM 8016: 16K (15359 net) random access memory (RAM)
CBM 8032: 32K (31743 net) random access memory (RAM)

POWER REQUIREMENTS

Volts: 110V
Cycles: 60 Hz
Watts: 100

SCREEN EDITING

CAPABILITIES
Full cursor control (up, down, right, left)
Character insert and delete
Reverse character fields
Overstriking
Return key sends entire line to CPU regardless of cursor position

INPUT/OUTPUT

Parallel port
IEEE-488 bus
2 cassette ports
Memory and I/O expansion connectors

FIRMWARE

24K or ROM contains:
BASIC (version 4.0) with direct (interactive) and indirect (program) modes

News and Speculation About Personal Computing

Conducted by Sol Libes

IBM and Matsushita To Join Forces?

Matsushita, the giant Japanese electronic conglomerate that markets Panasonic and Quasar products in the US, recently admitted that it had been approached by IBM in regard to manufacturing a personal computer for the US market. It's been rumored for some time that IBM is planning to market a Japanese-made personal computer in the US. Although Matsushita officials released no details regarding their talks with IBM, another report that Matsushita has already designed and built a personal computer has prompted some observers to theorize that the unit will bear the IBM name when it is marketed in the US later this year.

How Are The Personal-Computer Makers Doing?

Tandy Corporation, Radio Shack's parent company, continues to have an outstanding growth record. Tandy's sales for the 1979-1980 fiscal year rose to \$1.4 billion, up from the previous year's \$1.2 billion. Its income has increased 35% since it joined the microcomputer business, which now totals 13% of its overall sales.

This year Tandy expects to add 400 more stores to its fold of nearly 8000. In the US, there will be 250 more stores and 50 computer centers. Tandy plans to open 100 outlets overseas. Foreign sales currently account for 25% of its total sales.

Each Radio Shack store stocks more than 2600 items. The largest portion of a store's sales is parts and accessories (23%), with radios, tape recorders and phonographs second (19%), other audio components third (17%), and toys and microcomputers tied for fourth place (13%). Citizen's Band radios (10%) and telephones (5%) constitute the remaining sales.

Tandy leads the field in microcomputer sales. It sold over 200,000 computers last year for a total of \$180 million.

Tandy's gross sales for the final half of calendar year 1980 were \$869 million, and profits were \$80 million, compared with \$739 million and \$60 million for the same period the previous year. The upward trend continues: sales this past January shot up to \$141 million, from \$112 million the year before.

You can still purchase a TRS-80 Model I in England. The Model I was pulled from US shelves in January because it did not comply with the Federal Communications Commission's radio-frequency-interference regulations. Also in England, TRS-80s are sold through independent computer stores as well as through Tandy-owned TRS-80 Computer Centers. So, the same dealer selling Apple IIs and Commodore PETs has TRS-80s on the display shelf. Some dealers also carry the Video Genie EG3000, the Far-Eastern copy of the TRS-80.

Apple Computer Inc also chalked up record sales and income last year. Sales for the last quarter of 1980 were

up 246%, and profits were up 180%. The demand for Apple products in the first quarter of 1981 was greater than anticipated, but the company considers it unlikely that this growth will continue into the second quarter of the year.

Apple revealed that the commissions required to sell its stock last year came to \$93.3 million, or \$1.30 a share. The stock initially sold for \$20 to \$25 a share; it peaked at a high of \$35, and it's currently selling in the neighborhood of \$25 a share.

Apple has had problems getting its Apple III computer into production. Announced in May 1980, the first Apple IIIs were not shipped until January 1981, and then only in limited quantities.

Commodore International's sales for the last quarter of 1980 were \$45 million, up from \$31 million for the same period in 1979. Commodore has announced plans to construct a \$5 million plant in the Philadelphia area to build its microcomputer systems. Commodore expects to hire 250 to 400 people for the operation and open it before year-end.

Sinclair Research, maker of the low-cost ZX80 personal computer, claims that it is number three in units shipped, behind Radio Shack and Apple.

Mattel's keyboard-equipped Intellivision personal-computer system seems to be bumping up against the same sort of buyer resistance that Texas Instruments encountered with its TI 99/4. Consumers

are put off by the keyboard unit's \$700 list price, plus \$300 for the game-playing "master" component—total cost \$1000. That's several hundred dollars more than the TRS-80 Color Computer, the Commodore VIC, and even Texas Instruments' TI-99/4. Further, Mattel has had delivery problems: it had originally intended to introduce the system in 1979. Intellivision's marketing is mainly through department stores.

First Personal Computer With Built-In Winchester-Disk Drive:

Vector Graphic Inc has unveiled the first personal-computer system with a built-in Winchester-type hard-disk drive. The Model 3005 houses a video monitor, keyboard, S-100 motherboard, Z80 processor, 64 K bytes of programmable memory, a video interface called Flashwriter, a dual-mode disk controller, a Seagate Technology 5-inch Winchester drive, and up to three quad-density 5-inch floppy-disk drives. The system with one floppy-disk drive costs \$7950.

Tandy Files Suit Against Competitor:

Tandy Corporation has brought suit against Personal Microcomputers Inc (PMC), Mountain View, California. Tandy accuses PMC of conspiracy and infringement on the design of the Radio Shack TRS-80 personal computer. Included in the suit are five manufacturers and dealers for Personal Microcomputers' PMC-80 personal computer. The PMC-80 is hardware- and

MILESTONE™ - \$295. Manual alone - \$30.

"Critical path" network analysis program for scheduling manpower, dollars and time to maximize productivity.

An interactive project management program that runs under CP/M and can relate together different skills, hourly pay rates and projects to maximize efficiency. MILESTONE could be used to track paper flow, build a computer, check a salesman's performance, or build a bridge. MILESTONE can be used by executives, engineers, managers, and small businessmen to:

- Find the critical tasks which can't be delayed.
- Discover which tasks are not time critical.
- See how manpower and expenses vary versus time.
- Investigate tradeoffs between manpower, dollars and time.
- Give plans to others using a printed project schedule.
- Change details and immediately see the results on screen.

Requires 54K RAM and CP/M. Specify Z80, 8080 or CDOS. Also available for Apple Pascal, UCSD Pascal or CP/M-86 operating systems.

Formats: 8, NS, MP, CDOS, SB, TRS2, APPL

DATEBOOK II™ - \$295. Manual alone \$25.

- NOW SCHEDULES APPOINTMENTS FOR UP TO 27 DIFFERENT PEOPLE
- IMPROVED FILE STRUCTURE ALLOWS APPOINTMENTS UP TO ONE YEAR
- Replaces your office appointment calendar
- Searches for openings that fit time of day, day of week & day of year constraints
- Appointments made, modified or cancelled by a few key strokes
- Copies of day's appointments can be quickly printed

Requires 54K RAM and CP/M. Specify Z80, 8080 or CDOS. Also available for Apple Pascal, UCSD Pascal or CP/M-86 operating systems.

Formats: 8, NS, MP, CDOS, SB, APPL, TRS2

dBASE II™ - \$695. Manual alone - \$50.

Assembly language relational data base management system. Can be used interactively with English-like commands or program it using a command file. Can read your ASCII files and add the data to its own data base. Report generator and user-definable full screen operations allows use of your existing forms.

Requires 48K RAM and CP/M. Formats: 8, NS, MP, SB, APPL, TRS2

MAGIC MENU™ - \$75.

With Spellguard option - \$95.

Turns Magic Wand into a turnkey system. Allows move from EDIT to PRINT, backup of files or disks, system status, etc. from menu without returning to CP/M 2.x

Requires 56K RAM, CP/M and Magic Wand.

SPELL MENU™ - \$95. Spellbinder version of Magic Menu.

Formats: 8, NS, MP, SB, TRS2, APPL

OEMS and SOFTWARE DEVELOPERS

We can write a custom Menu for your software packages. Call us for details.

SELECTOR/86™ - \$650.

A totally self-contained CP/M-86 Data Base System providing complete data, procedural, query, and report definition functions. Allows records to be managed on a one-for-one basis, as well as in "batch" mode where several files can communicate with each other in a variety of ways. Includes "key fields". Record size is limited up to memory size (not limited up to 256 bytes). File size is unlimited up to disk storage space.

Requires CP/M-86 and CBASIC/86. Format: 8

FORMAT CODES: 8 (8" single density IBM soft-sectored) NS (NorthStar DD) MP (Micropolis Mod II/Vector MZ) SB (Superbrain 3.0) CDOS (8" Cromemco CDOS) TRS2 (TRS-80 Mod II) APPL (Apple II)

PASCAL/M™ - \$225. Manual alone - \$20.

CP/M compatible language for 8080/8085 CPUs, supports full Jensen & Wirth plus 45 extensions to Standard Pascal including Random access files, 40 segment procedures & 16 bit BCD real type. NOW INCLUDES symbolic debugger which features trapping on stores, examining and changing variables and tracing of program execution.

Requires CP/M & 54K RAM. Formats: 8, NS, CDOS, APPL, TRS2

PASCAL/M for 8086/88 - \$270.

Manual alone - \$20.

All features of Pascal/M for the 8086 and 8088 processors running under the 8086/88 version of CP/M.

Requires CP/M-86™ & 128K RAM. Format: 8

TRANS 86™ - \$125. Manual alone - \$20.

8086/88 Translator for existing 8080/8085 programs. The new source code can be easily edited and assembled using ACT II to produce hex code which can be executed by 8086/88. Emphasizes the extensions and features available in the 8086/88.

Requires CP/M and 32K RAM. Formats: 8, NS, CDOS, APPL

ACT I™ - \$125. Manual alone - \$15.

CP/M compatible macro assembler for Z80, 8080/85, 6502 & 6800.

One assembler that supports all major 8 bit micros. ACT features include full macro capabilities, comprehensive pseudo-ops, link-file structures, cross reference map, and algebraic expression processor. Requires 24K RAM & CP/M.

ACT II - \$175. Manual alone - \$20.

CP/M 2.x compatible cross assembler for 8086/88

ACT III - \$125. Manual alone - \$20.

CP/M 2.x compatible cross assembler for 6809.

ACT I and ACT II together - \$225.

Formats: 8, NS, CDOS, MP/M, TRS2, APPL

PEARL™ The application software generator

Pearl asks questions that a programmer would have to answer to code the system. You answer the questions & Pearl uses built-in logic to construct both subroutines & mainline programs. The system then compiles & executes your program code.

• Level 1: For Personal Computing - \$130./\$35.
• Level 2: The Business Assistant - \$350./\$35.
• Level 3: Adv. Software Develop. - \$650./\$50.

Requires CP/M and CBASIC2. Formats: 8, NS, MP, SB, TRS2

CBASIC/86™ - \$325.

Industry standard intermediate code basic compiler with run-time interpreter for CP/M-86. Features include chaining, integer and external precision arithmetic, random and sequential records of any length (not limited to 256 bytes).

Requires CP/M-86. Format: 8

SELECTOR IV - \$550.

S-BASIC - \$295.

ULTRASORT-II - \$175.

FABS - \$175.

Textwriter III - \$125.

Apple II HOME FINANCE PROGRAM - \$49.95

CBASIC2 - \$120.

Dealer inquiries invited

PLAN80™ - \$295. Manual alone - \$30.

A financial modeling system that's easy to use yet powerful enough to replace most timesharing applications.

Lets you tackle any numeric problem that can be defined in a worksheet format. It performs complex calculations quickly and precisely and lets you examine "What if?" questions so you can evaluate more planning alternatives in greater detail.

With PLAN80 you get more than your calculated results. You know how you get them, because you define rows and columns with familiar names such as UNITS, PRICE and JANUARY and express calculations in terms such as SALES=UNITS*PRICE. It's easy to review your assumptions and methods with people who have never seen PLAN80.

At any point in the PLAN80 model you may display or print results on your screen, printer or disk, save all or part of the results for use by another model, or play "What if?" by inputting new values, recalculating and displaying or printing results.

Best of all, you can incorporate PLAN80 results into any report that requires a financial model—using your word processor—to create professional results.

Requires 56K RAM and CP/M. Also available for CP/M-86, Specify Z80, 8080 or CDOS. Formats: 8, CDOS, NS, MP, SB

SPELLGUARD™ - \$295. Manual alone - \$20.

20,000+ word dictionary containing commonly used words that find spelling & typographical errors in text files. Allows review of mis-matched words & speedy search routine.

Requires CP/M, 48K RAM & Magic Wand, WordStar™ or Spellbinder™

Formats: 8, NS, MP, SB, TRS2, CDOS

SPELLBINDER™ - \$495. Manual alone - \$50.

Full feature word processing system with Office Management capabilities. Its special features include ease-of-use by office personnel, flexible print formatting & output, and a powerful macro capability which allows features to be added for the unique requirements of each user. Mail list macro is included for mail merge with form letters.

Requires CP/M & 32K RAM. Formats: 8, NS, MP, CDOS, SB, APPL

MCALL™ - \$85.

Communications program designed to drive an acoustic coupler. Features include:

- Time sharing Terminal emulation
- Disk file transfer between CP/M computer & Time Sharing Computer in either direction
- Disk file transfer between two CP/M computers with error detection and correction

AMCALL™ - \$95.

Auto-answer, auto dial version of MCALL currently supports IDS 88-modem & Potomac Micro-Magic MM-103 boards.

Requires CP/M. Formats: 8, NS, MP, SB, CDOS

MICROSTAT™ - \$250. Manual alone - \$25.

Powerful statistical analysis package. Includes data management sub-system for editing, sorting, ranking, logging, data file transfers PLUS eleven data transformations (e.g. linear, reciprocal, exponential, etc.)

- Frequency distributions, 8 probability distributions
- Multiple regression, correlation analysis
- Time series
- Crosstabs/Chi-Square, non-parametrics
- Factorials, permutations, combinations
- Scatterplots
- ANOVA (one and two-way)

Requires 48K RAM, NorthStar Basic or CP/M & CBASIC2 or Microsoft Basic 80.

Formats: 8, NS, MP, SB, TRS2, CDOS, APPL

software-compatible with the TRS-80 Model I. Tandy is demanding damages and an injunction. Tandy claims that the PMC-80 contains "input/output programming copied from the plaintiff's TRS-80," and that the "defendants have marketed said microcomputer under the name PCM-80, which is confusingly similar to Tandy's registered trademark TRS-80."

Chess Game Has Robot Arm: The newest model of the popular Boris computer chess game has a robotic arm that moves and captures chess pieces. Called "Boris Handroid," it features the Boris 2.5 chess program that won the 1979 European Microcomputer Chess Championship. Sensors in the chessboard detect the human opponent's moves, and Boris Handroid responds by moving its piece. The game costs \$1495 with the arm or \$295 without.

UCSB Pascal Version 4.0 Being Tested: Softech Microsystems' new 4.0 version of UCSB (University of California, San Diego) Pascal is being tested at selected user sites. Softech has not yet set a release date. The new version adds multitasking and upgraded screen-handling functions. Four new p-code instructions have been added, which will create problems for version 3 users.

The UCSB Pascal compiler translates Pascal statements into a series of p-code (pseudocode) instructions, which are then interpreted during execution by a p-code-interpreter program, except on the Western Digital (WD) Pascal Micro-engine, which executes p-codes according to hardware microcode. The p-code system allows the UCSB

Pascal system to operate the same way on many different systems.

Western Digital has not yet decided on how it will upgrade machines currently in the field to work with the new p-codes. WD notes that its control-store memory still has about 25% free space; therefore, an "outboard" control store on the main computer board could be added, rather than changing the entire control store.

U pdate On 32-Bit Microprocessors: The International Solid-State Circuits Conference (ISSCC) met in New York last February and heard presentations on two 32-bit microprocessors and some disclosures on a third.

Intel released further details on its 32-bit iAPX432 processor. It is Intel's first departure from previous architecture and instruction sets, so there is no software compatibility with its 8086 (16-bit) and 8085 (8-bit) microprocessors. Each of the iAPX432's three integrated circuits has four lines of sixteen pins. There are two general processors and an I/O (input/output) processor. The iAPX432 can link to 8086s and existing peripheral and memory integrated circuits. Intel is boasting performance of up to 2 MIPS (million instructions per second).

It took five years to engineer the iAPX432, and the company estimates that \$25 million was spent on the project. Intel expects to sell at least 10,000 sets in the first year of production, which is projected for 1982. The initial price for the set will be \$1500. Intel started shipping evaluation sets in February and is offering a board-level evaluation kit for \$4250.

Intel claims that each of the three integrated circuits contains about 200,000 transistors.

Two chips operate as a pipeline pair: the 43201 processor, which contains the instruction decoder, and the 43202, which is the microexecution unit. The 43203 is the I/O processor. It provides an interface from the I/O subsystem to the protected-access environment of the central system. Each I/O subsystem uses an 8- or 16-bit microprocessor to control I/O, independent of the central system. An address space of more than 4 gigabytes (4×10^9 bytes) and a virtual memory-address space of a terabyte (10^{12} bytes) is supported.

A protection scheme is provided to limit access to programs. The iAPX432 can perform floating-point operations on 32-, 64-, and 80-bit numbers. Hardware failures can be detected by interconnecting identical iAPX432 processors in a self-checking arrangement.

The system uses compiled Ada code as its machine language. The language interpreter is contained in a 64 K-byte microcode ROM (read-only memory).

Intel has also released an Ada cross-compiler for the iAPX432. The compiler runs on a DEC (Digital Equipment Corporation) VAX-11/780 or an IBM 370. It costs \$30,000. A \$50,000 hardware link is needed to download the compiled code to Intel's \$4250 development board.

With the iAPX432, Intel appears to have a two-year jump on its competition. At the conference, Hewlett-Packard (HP) disclosed that it is in the early stages of development on a 32-bit microprocessor. HP claims to have built and tested a single chip with 450,000 transistors (which is about what Intel has in its set of three integrated circuits). It operates with an 18 MHz clock and is microprogrammed in 9 K 38-bit

words in an on-board ROM. HP will have four other peripheral devices: an I/O controller, a memory controller, a 128 K-bit program-mable memory, and a 512 K-bit ROM. The device is still being developed and no production commitment or product use has been determined.

Texas Instruments announced that early next year it will unveil a 99000 processor. TI refuses to disclose details, but it appears that the 99000 will have 32-bit addressing without 32-bit processing.

Chairperson Andrew Allison and his IEEE (Institute of Electrical and Electronics Engineers) working group is developing a bus standard to accommodate microprocessors from 8 to 32 bits in word length. The standard will have a 32-bit multiplexed address- and data-path compatible with 32-, 16-, and 8-bit microcomputers. It will allow up to thirty-two bus masters and multitasking via a serial interprocessor link that may use interrupt arbitration. A maximum initial clock rate of more than 10 MHz will be specified.

Floppy-Disk Densities Increasing: Ten years ago, IBM introduced an 8-inch disk drive capable of storing 400 K bytes of data (unformatted) on one side of a floppy disk. Shortly afterwards, double-density encoding schemes that allowed up to 800 K bytes of storage were introduced. Then in 1976, IBM came up with the double-sided drive, which increased data storage up to 1.6 megabytes. That same year Shugart Associates introduced a drive using a 5-inch floppy disk that could store 110 K bytes on a single-sided single-density disk. Later double-density double-sided (DDDS)

TALK IS CHEAP

LET THE OTHERS TALK ABOUT PROPOSED SOLUTIONS. COMPUPRO DELIVERS RESULTS.

When you want no-excuses operation, **CompuPro** stands behind you with a family of cost-effective - and technologically innovative - products that conform fully to the IEEE 696/S-100 standards. High speed operation frees you from obsolescence as CPU clock speeds increase, while low power consumption saves energy and promotes reliability.

There's a time for toys and home entertainment computers; and there's a time for professional machines that are expandable, modular, and exceptionally reliable. When that time comes, **CompuPro** delivers the results you need.

AND NOW... THE "BIG 8" SPECIAL PACKAGE!

Our "Big 16" package promotion went over so well that we decided to come up with something equally potent for 8 bit machines. Whether you're upgrading an existing system or assembling a brand new machine, the "Big 8" is ideal - just add terminal, disk drive, enclosure, and printer and you're up and running with one of the fastest, most powerful 8 bit systems around.

This easily upgradable package includes:

- Disk 1 DMA Disk Controller
- CPU Z with 6 MHz CPU
- Interfacer 1 or 2 (your choice; Interfacer 1 standard)
- CP/M*-80 2.2 on disk
- 32K of fast, low power, static RAM

To sweeten the deal, we'll add another 32K of RAM if you order from us or your computer store before August 1, 1981. And if you need an enclosure, **Enclosure 2** (desktop version) is available with this package for only \$795 - giving you even more savings.

Total value of the package: \$2712...but our special package price gives you the "Big 8" for \$1995! Who says CompuPro S-100 speed and reliability can't be cost-competitive with home entertainment computers?

DISK 1: A SUPERB DISK CONTROLLER. A/T \$495, CSC \$595

This state of the art design uses properly implemented DMA with arbitration, allowing **Disk 1** to co-exist on the same bus with up to 15 other DMA devices. 24 bit DMA addressing capability allows disk access to a full 16 megabyte memory map.

Disk 1 transfers data independently of CPU speed for efficient operation with older 2 MHz CPUs as well as the new high speed 8086s; handles up to four 8" or 5.25" floppy disk drives (including 96 track high density minifloppies), single or double sided, single or double density (soft sector); includes BIOS for CP/M-80*, as well as on-board boot for automatic startup and on-board 3 wire serial interface for system initialization; and is compatible with MP/M*, OASIS*, CP/M-80, and CP/M-86.

We weren't going to put out another me-too disk controller...and we didn't. Want proof? The manual is available separately for \$20. The **CompuPro** Disk Controller is here.

COMPUTER ENCLOSURE 2 \$825 desk top version, \$895 rack mount version

Includes fused, constant voltage power supply (+8V at 25 Amps, +16V at 3 Amps, and -16V at 3 Amps); 20 slot shielded/active terminated motherboard; and rugged all-metal enclosure with AC outlets on rear, heavy-duty line filter, circuit breaker, low noise fan, and reset switch. Rack mount version includes slides for easy pull-out from rack frame.

Also available: **COMPUTER ENCLOSURE 1**. Same as above, but less power supply and motherboard. \$289 desktop, \$329 rack mount.

SYSTEM SUPPORT 1 \$295 Unkit, \$395 A/T, \$495 CSC

Includes sockets for 4K of extended address EPROM or RAM (2716 pinout) with one battery backup RAM socket; battery operated month/day/year/time crystal clock with BCD outputs; socket for optional math processor (9511 or 9512); full RS-232 serial port; three 16 bit interval timers; two interrupt controllers; power fail indicator; and comprehensive owner's manual with numerous software examples (manual available separately for \$20; add \$195 to the above prices for the optional 9512 math processor.)

*LEGAL CORNER: 280A is a registered trademark of Zilog; PASCAL/M is a trademark of Sorcim; CP/M and MP/M are registered trademarks of Digital Research; OASIS is a trademark of Phase 1.

SOFTWARE

8088/8086 MONITOR-DEBUGGER: Supplied on single sided, single density, soft sector 8" disk. CP/M* compatible. Great development tool; mnemonics used in debug conform as closely as possible to current CP/M* DDT mnemonics. \$35.

PASCAL/M* FROM SORCIM: SORCIM's PASCAL/M is the best implementation we've been able to find regardless of price - a totally standard **Wirth PASCAL/M* 8" disk** and comprehensive manual. \$175 (specify Z-80* or 8080/8085 version).

S-100 MEMORIES FROM THE MEMORY LEADER

CompuPro memories feature fully static design to eliminate dynamic timing problems, flawless DMA, full conformance to all IEEE 696/S-100 specifications, high speed operation (10 MHz), low power consumption, extensive bypassing, and careful thermal design.

floppy-disk drives were introduced that could store up to 440 K bytes (unformatted).

Recently, Shugart announced 5-inch drives in which track density was increased from 48 tpi (tracks per inch) to 96 tpi, allowing up to 1 megabyte on a DDDS drive. However, increasing the track density on 8-inch drives is more difficult because the larger disks have deformation problems that result in errors. Drive and disk makers are trying to overcome the problems by changing the disk materials and drive designs. The current objective is to increase track density to 96 or 100 tpi by early next year. It is felt that 200 tpi is feasible with different materials.

Manufacturers are trying to obtain densities of 3 and 6.5 megabytes on 5-inch floppy disks and 5 to 10 megabytes on 8-inch floppies. The 3- and 5-megabyte densities appear to be achievable in the near future; however, reaching 10 megabytes on an 8-inch disk is expected to take longer to achieve.

In the meantime, PerSci Inc has taken the wraps off an 8-inch floppy-disk drive with a storage capacity of 2.5 megabytes. It's the same size as a standard 8-inch drive, but uses four read/write heads to access both sides of two DDDS disks.

IBM To Build Josephson Computer: IBM is going to construct an experimental computer entirely based on exotic Josephson-junction devices. This will be the first of its kind, and IBM hopes to have it up and running in five years. The 5000-circuit processor, with 400 K bits of programmable memory, is expected to have a 2 ns cycle time and will be no larger than 18 by 20 by

41 mm.

Josephson-junction transistors are superconductive and can switch in less than 10 ps (picoseconds). They consume very little power (usually 500 nW) and typically require a +1 V power supply.

Such a computer could be fifty times faster than current high-speed computers. Engineers have hypothesized that a Josephson-junction-based computer could have a nonvolatile solid-state magnetic memory, and, because of the greatly reduced resistance within its super-cool liquid-helium immersion, thin connectors could be used. Additional attributes could include no crosstalk between devices and immunity to thermal noise. Problems are anticipated in testing and debugging because of the thermal stresses placed on the devices.

If the project is successful, IBM expects to pack a 300,000-circuit processor (about the capacity of an IBM 3033) with 256 K bytes of cache memory and 64 megabytes of main memory into a cube less than 15 cm on a side.

Random Rumors: DEC (Digital Equipment Corporation) is working on a personal computer designed to compete with the Apple III. It's expected to be introduced by year's end. Word is that DEC tried to buy Apple some time ago but was snubbed. . . . Observers expect Apple to introduce a dual-density dual-sided disk system with 600 K bytes of storage for the Apple II and III. You can expect a 5-inch Winchester disk drive with 5-megabyte capacity to hit the shelves by late summer. Apple is considering dropping the present version of the Apple III in favor of a new model that's more busi-

ness-oriented. The new model will probably contain a hard-disk drive instead of a floppy-disk drive. Apple is scheming an upgraded Apple II with a faster microprocessor and expanded memory size. . . . The Source timesharing system is preparing to sell a low-cost (\$600) terminal with built-in modem and printer port; it has a folding keyboard for portability. . . . Texas Instruments is about to introduce a small low-cost robot arm. . . . Hewlett-Packard is preparing an under-\$2000 system, maybe for this year. . . . ADDS (Applied Digital Data Systems) says that it will soon introduce a dumb terminal priced one-third less than current models. . . .

Random News Bits: Zenith Radio Corporation has a special video display for automobile dashboards. . . . RCA has received a patent for a technique that stores up to 100 gigabits (ie: 100 billion bits) on a laser disk intended for video. A complete encyclopedia can be stored on such a disk. . . . Sears Roebuck will open five computer stores. If they are successful, Sears Roebuck will sell computers nationwide. . . . Marker Ski Bindings has a binding with a built-in microprocessor. The battery-powered unit costs \$200 and must be custom programmed for the skier. . . . Ohio Scientific's new Challenger 8P-HD personal computer has a Votrax voice-synthesizer output system and a voice-input system. It requires a 10-megabyte Winchester disk to function. . . . The Votrax SC-01 Voice Synthesizer Chip is now available from The MicroMint of Woodmere, New York. The Votrax division of Votrax will not sell the device in quantities of less than five.

. . . Zilog has reduced the price of the 16-bit Z8002 microprocessor from \$45 to \$19.90, in OEM quantities of 1000. . . . Intel may reduce its prices for the 8088 and 8086. . . . IBM has a 32-bit microprocessor up and running in its labs. . . . Apple recently purchased its distributor in Great Britain, and now has well over 1000 employees. . . .

Miniaturization Continues: Semiconductor manufacturers keep on packing more capability onto a single wafer of silicon. Intelligent controllers, especially, are benefitting from such efforts. Two of the most recent products are the National Semiconductor INS8073 and the Zilog Z8 system. The Zilog product line includes a microprocessor, designated Z8671, which contains a limited-BASIC interpreter and debugging monitor in on-board read-only memory. Steve Ciarcia is using the Z8671 to build a complete computer system measuring 4 by 4½ inches with serial and parallel I/O ports and 4 K bytes of user memory. Users can program process-control and monitoring functions using the BASIC interpreter. (See next month's "Ciarcia's Circuit Cellar.")

Know Your Dealer: Sources at Radio Shack report the company has been receiving a large number of complaints because of confusion over warranty service on TRS-80s. The problem stems from the fact that Radio Shack does not honor warranties on computers purchased from dealers who are not authorized by Radio Shack. A large number of unauthorized dealers have appeared in the past year—most offering extremely low mail-order

The DataTrak™ Floppy Disk Drives from Qume® Distributed by asap

The DataTrak™ 5 double-sided double-density drive uses state-of-the-art technology to give you superior data integrity through improved disk life, data reliability, and drive serviceability using 5¼" media.

Qume's independent head load yields wear characteristics far superior to competitive drives. This superior wear performance produces savings on both diskette usage and drive maintenance.

Improved data reliability, resulting from superior amplitude and bit shift characteristics, optimizes operator efficiency and reduces processing time for end-users.

And DataTrak's unique modular design means simplified field servicing for you and your customers.

Design Features

Expanded storage capacity • Two-sided, double density

Proven head carriage assembly • Ceramic head with tunnel erase • Dual-head flex mounting arrangement • Superior head load dynamics

Precise lead screw actuator • Fast access time - 12 ms track-to-track • Low friction and minimum wear • Low power dissipation

Additional features • Industry standard 5¼" media format • ISO standard write protect • Door lock out for media protection • Requires DC voltage only • Daisy Chain up to 4 drives • Heads load on command independent of loading media

Product Specifications

Performance Specifications • Capacity: Unformatted: 437.5K or 500K bytes; Qume Formatted: 286.7K or 327.7K bytes • Recording Density: 5456 BPI • Track Density: 48 TPI • Cylinders: 35 or 40 • Tracks: 70 or 80 • Recording Method: FM or MFM • Rotational Speed: 300 RPM • Transfer Rate: 250K bits/second • Latency (avg.): 100 ms • Access Time: Track-to-track 12 ms; Settling 15 ms • Head Load Time: 50 ms

The DataTrak™ 5

The DataTrak™ 8

The DataTrak™ 8 double-sided double-density drive uses state-of-the-art technology to give you superior data integrity through improved disk life, data reliability, and drive serviceability using 5¼" media.

Qume's innovative approach to controlling head load dynamics yields wear characteristics far superior to competitive drives. In independent evaluation, DataTrak 8 is setting industry standards for tap test performance. This superior wear performance produces savings on both diskette usage and drive maintenance.

Improved data reliability, resulting from superior amplitude and bit shift characteristics, optimizes operator efficiency and reduces processing time for end-users.

And DataTrak's unique modular design means simplified field servicing for you and your customers.

Design Features

Expanded storage capacity • Two-sided, double density

Fully IBM compatible • IBM 3740 and System 32 drives • IBM 3600 and 4964 drives • IBM System 34 drives

Proven head carriage assembly • Ceramic head with tunnel erase • Dual-head flex mounting arrangement • Superior head load dynamics

Fast, precise steel belt drive • Fast access time - 3 ms track-to-track • Low friction and minimum wear • Low power dissipation

Additional features • ISO standard write protect • Programmable door lock • Negative DC voltage not required • Daisy Chain up to 4 drives • Side-by-side mounting in standard 19" RETMA rack • Compatible with Shugart SA850/SA851

Product Specifications

Performance Specifications • Capacity: Unformatted: 1.6 Mbytes/disk; IBM Format: 1.2 M/bytes/disk • Recording Density: 6816 BPI • Track Density: 48 TPI • Cylinders: 77 • Tracks: 154 • Recording Method: MFM • Rotational Speed: 360 RPM • Transfer Rate: 500K bits/second • Latency (avg.): 83 ms • Access Time: Track-to-track 3 ms; Settling 15 ms; Average 91 ms • Head Load Time: 35 ms • Disk: Diskette 2D or equivalent

prices on TRS-80 systems.

A Radio Shack spokesman said the company is attempting to close the pipeline to unauthorized dealers but declined comment on how the dealers are obtaining the equipment. He stressed that the majority of mail-order dealers are authorized and advertise the fact, but consumers are cautioned to be sure before ordering. If you need service on units purchased from unauthorized vendors, you'll have to pay full labor and parts rates.

DEC Drops LSI-11

Prices: Digital Equipment Corporation has lowered the prices on the 16-bit LSI-11 microcomputer products by almost 29%. Obviously, DEC is eager to compete with the new Intel 8086, Zilog Z8000, and Motorola 68000-based systems now

coming on the market. In fact, the new prices compete well with 8-bit microcomputer systems. A complete LSI-11 system with 32 K bytes of programmable memory and I/O interfaces, assembled in a cabinet, lists for \$2090. Also, the DEC RT-11 and FORTRAN package is now only \$640—\$40 more than the cost of a Microsoft CP/M FORTRAN package.

Packet Repeater Goes On The Air

The nation's first digital simplex packet-radio repeater (KA6M, Menlo Park, California) for amateur radio use has gone into operation. A similar system went into operation earlier in Vancouver, British Columbia, Canada. The station serves as a packet repeater and beacon. It receives a message or block of

data and, after verification, retransmits that message on the same frequency. The message may have some address or control bytes altered. The repeater extends the range and coverage of fixed and mobile stations. It is the first step in what promises to be a nationwide network of interconnected computer systems that allow toll-free communications.

Ethernet Acceptance Spreading

Ethernet, the local networking system, appears to be emerging as the de facto network standard. Although created by Xerox, Intel and DEC have agreed to support it with integrated circuits and system interfaces. Now Zilog has acknowledged that it will implement Ethernet interfaces

on its microcomputer systems. This is particularly noteworthy because Zilog is an Exxon subsidiary, and Exxon has announced its intention to develop a local-network system. Zilog's previously announced networking system Znet will still be supported by the company, in addition to the Ethernet interface.

Hewlett-Packard has made public that it will include Ethernet interfaces in some of its products. Digital Research intends to provide an Ethernet-to-CP/M software package.

ENTREPRENEURS NEEDED

MORE THAN EVER IN THE MICROCOMPUTER INDUSTRY

The shortage of knowledgeable dealers/distributors is the #1 problem of microcomputer manufacturers. Over 300 new systems houses will go into business this year, but the number falls short of the 1200 needed. It is estimated that the nationwide shortage of consultants will be over 3000 by 1981. The HOW TO manuals by Essex Publishing are your best guide to start participating in the continued microcomputer boom.

\$36. No. 10

Service Problem • Protecting Your Product • Should You Start Now? • How to Write a Good Business Plan • Raising Capital

HOW TO START YOUR OWN SYSTEMS HOUSE

6th edition, March 1980

Written by the founder of a successful systems house, this fact-filled 220-page manual covers virtually all aspects of starting and operating a small systems company. It is abundant with useful, real-life samples: contracts, proposals, agreements and a complete business plan are included in full, and may be used immediately by the reader.

Proven, field-tested solutions to the many problems facing the small systems house are presented.

From the contents:

- New Generation of Systems Houses • The SBC Marketplace
- Marketing Strategies • Vertical Markets & IAPs • Competitive Position/Plans of Major Vendors • Market Segment Selection & Evaluation • Selection of Equipment & Manufacturer • Make or Buy Decision • Becoming a Distributor • Getting Your Advertising Dollars' Worth • Your Salesmen: Where to Find Them • Product Pricing • The Selling Cycle • Handling the 12 Most Frequent Objections Raised by Prospects • Financing for the Customer • Leasing • Questions You Will Have to Answer Before the Prospect Buys • Producing the System • Installation, Acceptance, Collection • Documentation • Solutions to a Problem • Collecting Your Product • Should You Start Now? • How to Write a Good Business Plan • Raising Capital

\$28. No. 16

money • Avoiding the legal pitfalls • How consultants' associations can help you • The National Register of Computer Consultants • How others did it: real-life sample cases • and much more

HOW TO BECOME A SUCCESSFUL COMPUTER CONSULTANT

by Leslie Nelson, 2nd revised edition, Jan 1981

Independent consultants are becoming a vitally important factor in the microcomputer field, filling the gap between the computer vendors and commercial/industrial users. The rewards of the consultant can be high: freedom, more satisfying work and doubled or tripled income. **HOW TO BECOME A SUCCESSFUL COMPUTER CONSULTANT** provides comprehensive background information and step-by-step directions for those interested to explore this lucrative field.

- Established consulting markets • How to get started • Itemized start-up costs • Are you qualified? • Beginning on a part-time basis • The Marketing Kit • Should you advertise? • Five marketing tips • Getting free publicity • How much to charge • When do you need a contract? • Sample proposals • Which jobs should be declined • Future markets • The way to real big money • Avoiding the legal pitfalls • How consultants' associations can help you • The National Register of Computer Consultants • How others did it: real-life sample cases • and much more

COMPUTER BUSINESS OPPORTUNITIES 1981

This report covers an entire range of computer ventures. From the contents: Computer Services • Computer stores • Software Packages • Contract Programming • Third Party Field Service • Computer Supplies • Scrap Supplies and Components • Used Computers • Lease Brokerage • Computer Time Brokerage • The Independent Sales Rep • Finder's Fees • Services and much more.

No. 91 247 pages \$65.

HOW TO START & OPERATE A MAIL ORDER BUSINESS

by Julian Simon, 3rd revised edition, 536 pages, 1981

Indispensable for those selling software, equipment or supplies by mail. The first two editions of this book have fascinated readers — and brought them a fortune. The methods described here have brought millions of dollars in sales for the readers. Whether you are a newcomer starting from scratch or an established business anxious to cash in on the lucrative mail-order market, this book tells you how to create the kind of ads and mail order copy that will sell.

From the contents:

- where to go for direct-mail lists • how to get credit, deal with banks, handle merchandising • how to run one-inch ads that sell • how to get supplies and handle orders • what you may and may not do under current mail-order laws • how to make tactical decisions about handling complaints, making refunds, guarantees, trial orders.

There are fat profits to be made in mail order even for the person with limited time or capital, and this is the book that shows you how.

No. 130 \$21.95

\$30. No. 32

training users and providing maintenance and support. It also contains sample software contracts that have been used in actual software transactions. Also included are tips on how to negotiate with large corporations, ways of avoiding personal liability, techniques for obtaining free computer time and hints on how to run a free-lance software business while holding a full-time job.

FREE-LANCE SOFTWARE MARKETING

3rd edition, June 1980

Writing and selling computer programs as an independent is a business where • you can get started quickly, with little capital investment • you can do it full time or part time • the potential profits are almost limitless. Since the demand for computer software of all kinds is growing at an explosive rate, the conditions for the small entrepreneur are outstanding.

This manual will show you how to sell your own computer programs using these proven techniques: • direct to industries • through consulting firms • through manufacturers of computer hardware • in book form • mail order • through computer stores. It will show you how to profitably sell and license all types of software ranging from sophisticated analytical programs selling for thousands of dollars, down to simple accounting routines and games for personal computers.

a new star is born!

a better computer system
any way you look at it.

The facts speak for themselves. The QUAY 500 SERIES offers more for the money than North Star Horizon® computers.

MORE TECHNICAL FEATURES. A single board computer instead of a backplane with multiple boards, means fewer parts, fewer interconnections and fewer problems □ additional disk capacity for more program storage □ DMA controlled disk transfers for increased system performance □ on-board expansion capabilities for additional parallel and serial ports, and EPROM □ AC convenience outlets □ a more compact design.

IMMEDIATE DELIVERY. The 500 SERIES is available off the shelf for virtually immediate delivery. No waiting for far off delivery dates for this one.

LOWER PRICE. The advanced technology engineered into Quay computers actually lowers our cost to manufacture. The price of the 500 SERIES is about 20% lower than the Horizon-2-32K-D — and our 520 SERIES also offers significant savings over the Horizon-2-32K-Q.

Advanced single board modular design.

The bottom line is simple. There is a new star in the computer field. The 500 SERIES by Quay. It outshines all of the competition.

CP/M: A Family of 8- and 16-Bit Operating Systems

Dr Gary Kildall
Digital Research
POB 579
801 Lighthouse Ave
Pacific Grove CA 93950

This article is about microprocessors and CP/M: where they came from, what they are, and what they're going to be. Where they came from is history, what they are today is fact, and what they will become is, like any projection of technology, pure "science fiction" speculation. CP/M is an operating system developed for microcomputers. But as microprocessors changed, CP/M and its related programming tools evolved into a family of portable operating systems, languages, and applications packages.

The value of computer resources has changed dramatically with the introduction of microprocessors. Three major events have precipitated a revolution in computing: hand-threaded core memory has been replaced by mass-produced semiconductor memory; microprocessors have become plentiful; and IBM decided that the punched card is obsolete. Low-cost memory and processors have reduced the cost of computer systems to a few hundred dollars, but IBM's specification of the floppy disk standard has made the small computer system useful.

In the early days of the 8080 microprocessor, a small company called Shugart Associates was taking shape up the street from Intel. Shugart Associates, along with a number of other companies, viewed the floppy disk as more than a punched card replacement: at that time the primary

low-cost storage medium was paper tape (used in applications ranging from program development to word processing). At a cost of \$5, a floppy disk held as much data as two hundred feet of paper tape, and a disk drive retailed for only \$500—an unbeatable combination. Memory, processor, and floppy-disk technology improved, and by the mid-1970s, a floppy-based computer could be purchased for about one quarter of a programmer's annual salary. Quite simply, it was no longer necessary to share computer resources.

Since that time, microprocessors have been applied to a variety of

The 16-bit version of CP/M is basically the same as the 8-bit version, with the addition of memory management and enhancements to the file system.

computing needs beyond replacement of low-end minicomputers. Due to applications such as machine-tool movement and sensing, data acquisition, and communications, current interest lies in real-time control. In a real-time operating system, process

management can be separated from the I/O (input/output) system (which is not required in many applications). Real-time facilities allow the execution of interactive processes according to priority, and their addition or deletion in a simple fashion. This results in a custom operating system designed to solve a particular problem. In contrast to timesharing, real-time operating systems have minimal "interrupt windows" in which external interrupts are disabled. Real-time operating systems such as the Intel RMX and National Starplex packages provide this level of support.

The emerging interest in *local networks* poses a new challenge to designers of operating systems. Recently, Intel, DEC (Digital Equipment Corporation), and Xerox formed an alliance to promote Ethernet, a *packet-switching* network intended to provide point-to-point data transfer in an office environment. (In a packet-switching network, data from several slow-speed sources, such as user terminals, is collected over local lines by a single network node, which then periodically transmits the data to its destination at a much higher speed, in groups called packets.) In terms of evolution and potential, Ethernet is today what floppy disks were a decade ago. This inexpensive office network performs such tasks as the transfer of a form letter from data storage at one location to a memory typewriter in another part of the

The Emergence of Software as a Problem-Solving Tool

Microprocessors are a natural consequence of our technology. I recently visited the British Science Museum, where two particularly interesting historical developments were on display. The first exhibit chronicled the development of the finely machined iron and brass steam engines, complete with magnificent gauges, gears, whistles, and valves, that founded the Industrial Revolution.

The second exhibit displayed progress in computing, beginning with Charles Babbage's inventions of the early 1800s. What did these exhibits have in common? They showed machines built with the same technology: Babbage's analytic engine might easily be mistaken for a small steam engine!

I followed the sequence of displays, from Babbage's difference and analytic engines to great brass calculators and early punch cards, past relay and vacuum tube processors to unit record equipment, then to transistor and random logic computers and semiconductors and, finally, to a single Intel 8080 microprocessor.

Examined in this way, the technological momentum was obvious. Microprocessors are a direct result of our pattern of refinement through engineering. Just as a Boeing 727 is a refined version of the original Wright Brothers' invention, the microprocessor is a conse-

quence of "fine tuning" by scientists and engineers who strive to understand, simplify, and add function to mankind's tools. There were several conspicuous spaces waiting to be filled following the 8080 display.

In public television's "Connections" series, James Burke claimed that we are a society filled with machines that do everything: sew materials for our clothes, carry us from coast to coast, and print millions of newspapers daily. But the most important machines in our society do absolutely nothing by themselves. These multifunctional devices provide a variety of services depending upon our needs, and herein lies the essential advantage: in the past, we identified a need and built a machine to satisfy that need; today, technology provides us with a single machine that we can instruct, through a program, to solve almost any problem. Where are the "Thomas Edisons" who used to build machines? Most are now inventing programs.

The evolution of our electronics industry typifies refinement through engineering. Beginning with electrical and electronic switches, we began manufacturing general-purpose function chips: put a value x on the input pins, define the function f by setting voltage levels on a second set of pins, and the result, $f(x)$, magically appears on the output pins. Many

examples of such integrated circuits exist, ranging from three-state logic gates to arithmetic/logic units.

With the introduction of microprocessors, the function f may be defined through instructions in a read-only memory allowing, in principle, the implementation of any function using a single device. A design that once required connecting resistors, capacitors, and logic gates has developed into a program that instructs a multipurpose machine to perform the same function. Controlling a stoplight and balancing a checkbook are now equivalent problems: both require the invention of a program.

Refinement through engineering: does this not also apply to software? To properly frame the answer, remember that the primary purpose of a computer is to be useful. Therefore, the application program is really the only important result of a software-engineering activity. Our primary goal in refining software tools is to provide the means for rapid and accurate generation of simple, understandable, and effective application programs. We do this through three levels of software support: system languages, operating systems, and application languages. These tools form an inverted pyramid underlying application software.

Checkbook Maintenance.....Accounts Receivable.....Accounts Payable.....

BUSINESS 100 PROGRAM LIST

1	RULE78	Interest Apportionment by Rule of the 78's
2	ANNUI	Annuity computation program
3	DATE	Time between dates
4	DAYYEAR	Day of year a particular date falls on
5	LEASEINT	Interest rate on lease
6	BREAKEVN	Breakeven analysis
7	DEPRSL	Straightline depreciation
8	DEPRSY	Sum of the digits depreciation
9	DEPRDB	Declining balance depreciation
10	DEPRDDB	Double declining balance depreciation
11	TAXDEP	Cash flow vs. depreciation tables
12	CHECK2	Prints NEBS checks along with daily register
13	CHECKBK1	Checkbook maintenance program
14	MORTGAGE/A	Mortgage amortization table
15	MULTMON	Computes time needed for money to double, triple, etc.
16	SALVAGE	Determines salvage value of an investment
17	RRVARIN	Rate of return on investment with variable inflows
18	RRCONST	Rate of return on investment with constant inflows
19	EFFECT	Effective interest rate of a loan
20	FVAL	Future value of an investment (compound interest)
21	PVAL	Present value of a future amount
22	LOANPAY	Amount of payment on a loan
23	REGWITH	Equal withdrawals from investment to leave 0 over
24	SIMPDISK	Simple discount analysis
25	DATEVAL	Equivalent & nonequivalent dated values for oblig.
26	ANNUDEF	Present value of deferred annuities
27	MARKUP	% Markup analysis for items
28	SINKFUND	Sinking fund amortization program
29	BONDVAL	Value of a bond
30	DEPLETE	Depletion analysis
31	BLACKSH	Black Scholes options analysis
32	STOCVAL1	Expected return on stock via discounts dividends
33	WARVAL	Value of a warrant
34	BONDVAL2	Value of a bond
35	EPSEST	Estimate of future earnings per share for company
36	BETAALPH	Computes alpha and beta variables for stock
37	SHARPEI	Portfolio selection model i.e. what stocks to hold
38	OPTWRITE	Option writing computations
39	RTVAL	Value of a right
40	EXPVAL	Expected value analysis
41	BAYES	Bayesian decisions
42	VALPRINF	Value of perfect information
43	VALADINF	Value of additional information
44	UTILITY	Derives utility function
45	SIMPLEX	Linear programming solution by simplex method
46	TRANS	Transportation method for linear programming
47	EOQ	Economic order quantity inventory model
48	QJUEI	Single server queueing (waiting line) model
49	CVP	Cost-volume-profit analysis
50	CONDPROF	Conditional profit tables
51	OPTLOSS	Opportunity loss tables
52	FQJQOQ	Fixed quantity economic order quantity model

59	WACC	Weighted average cost of capital
60	COMPBAL	True rate on loan with compensating bal. required
61	DISCBAL	True rate on discounted loan
62	MERGANAL	Merger analysis computations
63	FINRAT	Financial ratios for a firm
64	NPV	Net present value of project
65	PRINDLAS	Laspeyres price index
66	PRINDPA	Paasche price index
67	SEASIND	Constructs seasonal quantity indices for company
68	TIMETR	Time series analysis linear trend
69	TIMEMOV	Time series analysis moving average trend
70	FUPRINF	Future price estimation with inflation
71	MAILPAC	Mailing list system
72	LETWRT	Letter writing system-links with MAILPAC
73	SORT3	Sorts list of names
74	LABEL1	Shipping label maker
75	LABEL2	Name label maker
76	BUSBD	DOVE business bookkeeping system
77	TIMECLK	Computes weeks total hours from timeclock info.
78	ACCTPAY	In memory accounts payable system-storage permitted
79	INVOICE	Generate invoice on screen and print on printer
80	INVENT2	In memory inventory control system
81	TELDIR	Computerized telephone directory
82	TIMUSAN	Time use analysis
83	ASSIGN	Use of assignment algorithm for optimal job assign.
84	ACCTREC	In memory accounts receivable system-storage ok
85	TERMSPAY	Compares 3 methods of repayment of loans
86	PAYNET	Computes gross pay required for given net
87	SELLPR	Computes selling price for given after tax amount
88	ARBCOMP	Arbitrage computations
89	DEPRSF	Sinking fund depreciation
90	UPSZONE	Finds UPS zones from zip code
91	ENVELOPE	Types envelope including return address
92	AUTOEXP	Automobile expense analysis
93	INSFILE	Insurance policy file
94	PAYROLL2	In memory payroll system
95	DILANAL	Dilution analysis
96	LOANAFDD	Loan amount a borrower can afford
97	RENTPRCH	Purchase price for rental property
98	SALELEAS	Sale-leaseback analysis
99	RRCONVBD	Investor's rate of return on convertible bond
100	PORTVAL9	Stock market portfolio storage-valuation program

NAME

DESCRIPTION

53	FQEQWSH	As above but with shortages permitted
54	FQEQQPB	As above but with quantity price breaks
55	QJUEICB	Cost-benefit waiting line analysis
56	NCFANAL	Net cash-flow analysis for simple investment
57	PROFIND	Profitability index of a project
58	CAP1	Cap. Asset Pr. Model analysis of project

Circle 154 on inquiry card.

building. When modifications are completed, the letter is typed locally or sent to a laser (or other) printer that is a shared network resource.

Most timesharing systems handle a network through simple file transfers between the machines (*nodes*) in the net, but real refinements occur when the operating system itself is distributed among the nodes. File access is provided by one *server* node, while a computing function is performed by another. To the user, a *requester* node appears as a powerful computing facility, even though it may consist of only a local microprocessor, a console, and a limited amount of memory.

What refinements have been made to operating systems? Our models have been simplified; we understand primitive operations required for reliable process synchronization in real-time systems, and the human-oriented interface in interactive subsystems has been improved. We will, no doubt, continue to refine our models for timesharing and real-time

operating systems, but the most exciting new operating system technology will develop around emerging network hardware.

Application Languages

Application languages form the top level of support for application programming. How does this level of language differ from other language levels? First and foremost, an application language contains the operations and data types suitable for expressing programs in a particular problem environment. FORTRAN (*FORmula TRANslation*), for example, was designed in the late 1950s for scientific applications; FORTRAN programs, therefore, consist primarily of algebraic expressions operating upon binary floating-point numbers expressed in scientific notation. However, FORTRAN contains only primitive file-access facilities and no decimal arithmetic, making it unsuitable for commercial data processing. COBOL (*COmmon Business Oriented Language*) has the commercial

facilities, but it excludes scientific features such as a complete transcendental-function library.

In contrast to system languages that run on a given machine, these application languages would ideally contain no machine-dependent features. An application language is either poorly designed or ill-suited for a particular problem if the programmer is forced to use extra-lingual constructs to access lower-level functions of the operating system or machine. The language must be a standard, without the necessity for various locally defined language extensions. An extended standard language is of limited value since the extensions are unlikely to exist in other implementations.

The evolution of PL/I (*Programming Language/One*) provides a good example of refinement in application languages. PL/I is not a new invention: rather, it was defined by a committee of IBM users in 1960 as a combination of ALGOL (*ALGO-rithmic Language*), FORTRAN, and COBOL, with a liberal sprinkling of new facilities. ALGOL's principal contribution was block structure and nested constructs, while FORTRAN contributed scientific processing and COBOL added commercial facilities. This combination produced a large, unwieldy language with twists and nuances that can trap the unwary programmer. Nevertheless, PL/I was quite comprehensive, and it served as the basis for uncounted numbers of application programs on large systems. One noted use of PL/I was in the implementation of the Multics operating system at MIT under Project MAC.

In 1976, an ANSI (American National Standards Institute) committee produced a standard language definition for PL/I. The standard is an implementation guide for compiler writers, and it precisely defines the form and function of each PL/I statement. Aware that PL/I was too large and complicated, the committee produced a smaller version for minicomputers, called Subset G. This new language excluded the redundancies and pitfalls of full PL/I but retained the

BUS-TO-BUS COMMUNICATION

- Inexpensive S-100 computers can now communicate with the IEEE-488 instrumentation bus. The P&T-488 meets the IEEE-488 1980 standard for **controller**, **listener**, and **talker**.
- "Canned" **software** allows simple communication with the 488 bus from Basic, Pascal, and other high level languages.
- Special features include an interactive **busmonitor** program and a functional self-test program.

Price for (1) P&T-488 with software, assembled and tested: \$450 (domestic price) FOB Goleta, CA.

GENERAL LEDGER, ACCOUNTS RECEIVABLE, ACCOUNTS PAYABLE, PAYROLL, INVENTORY CONTROL AND INVOICING (Small Business Group).....an extensive business system for the serious user.....can be used one module at a time or as a coordinated system.....\$199.95 per module.....\$1199.95 for the complete system.*

MASTER PAC 100.....100 essential programs.....BUSINESS.....PERSONAL FINANCE.....STATISTICS.....MATH.....GAMBLING.....GAMES.....includes 125 page manual and 5 diskettes \$59.95

BUSINESS PAC 100.....100 essential business programs.....INVENTORY CONTROL.....PAYROLL.....BOOKKEEPING SYSTEM.....STOCK CALCULATIONS.....CHECKBOOK MAINTENANCE.....ACCOUNTS RECEIVABLE.....ACCOUNTS PAYABLE.....includes 125 page manual and five diskettes \$99.95

INFORMATION SYSTEM (The Bottom Shelf).....An in-memory information system for small mailing lists, inventories (i.e. books, articles, records, program reference files).....Can be used for anything that you would use rolodex or index card files.....Up to ten user define fields.....Programmable printouts for rolodex cards, mailing labels, etc.....Will identify all records that contain a group of characters you've entered even if that group is in the middle of a line.....Sorts data base by any field \$49.50*

DATA MANAGER II (The Bottom Shelf).....RANDOM ACCESS Disk based DATA MANAGEMENT SYSTEM (Similar to INFORMATION SYSTEM above.....but RANDOM ACCESS STORAGE expands the amount of storage space available).....Used to replace index cards for medium sized mail lists, inventories, personnel records, sales prospects, etc.....Uses up to four disk drives on line.....Up to twenty user defined fields, programmable printouts for rolodex cards, etc.....will identify all records that contain a group of characters you've entered even if that group is in the middle of a line.....maintain up to 5 changeable presorted "key" files.....variable length random records (the smaller the record you define, the more records you can store) \$99.95*

BUSINESS MAIL SYSTEM (The Bottom Shelf).....Handles large mailing lists (up to 150,000 names).....supports 3 or 4 line addresses.....files automatically in zip code order, alphabetical within zip code.....formats for 1 to 4 across mailing labels.....supports quick disk location of single or multiple names.....meets all industry and postal standards.....numeric code fields included for printing selected records \$125.00*

ANALYSIS PAD (The Bottom Shelf).....A Columnar Calculator for financial analysis, line item budgeting, cost analysis, sales analysis and almost any financial function (and many statistical functions).....create matrices of 29 x 39.....make all entries at one time either by row or column.....add, delete, move or switch columns and rows.....edit any data from full screen display.....add, subtract, multiply and divide one column by another and put results in designated column (up to six calculations can be made and placed in designated column).....define columns as constants.....save calculations and formulas on disk.....results can be printed in a variety of report formats \$99.95*

CHECKBOOK II (The Bottom Shelf).....A complete in memory checkbook balancing and reconciliation program.....five column keyboard input with 5 characters for check number, 16 for payee, 4 for code.....numerical sort routine \$49.50*

CHECK REGISTER ACCOUNTING SYSTEM (The Bottom Shelf).....A complete random access checkbook system.....set and define up to 60 accounts with as many income accounts as you choose.....complete checkbook balancing and reconciliation.....single entry input where transaction can be dispersed over several accounts.....enables user to make a 64-character note on each transaction.....print out your own check after data entry.....prints monthly summaries of each account with month and year-to-date totals.....create a suspense file to remind you of coming expenses.....Reports generated included Check Register (for any month), notes to Check Register, Income/Expense Distribution Report, Statement of Selected Accounts, Bank Reconcile Statement, Suspense File and Full Account Distribution Statement \$74.95*

LIBRARY 100 (The Bottom Shelf).....100 Programs on a broad range of topics.....Finance.....Education.....Graphics.....Home.....Games.....CASSETTE VERSION \$49.50
DISK VERSION \$74.95

ADVENTURE (by Scott Adams).....A series of games (for ages 10-99).....wander through enchanted worlds seeking treasures.....1. Adventureland.....2. Pirate's Adventure.....3. Mission Impossible Adventure.....4. Voodoo Castle.....5. The Count.....6. Strange Odyssey.....7. Mystery Fun House.....8. Pyramid of Doom.....9. Ghost Town.....(#1 and #2 recommended for the movie adventure).....Each adventure \$14.95 (jon cassette).....Diskette versions sold in groups of three at \$39.95 per three programs (#1 - #3, #4 - #6, #7 - #9).

HORSE SELECTOR II (Dr. Hal Davis).....New simplified version of the original Horse Selector (for flats).....The first Horse Selection System to actually calculate the estimated odds for each horse.....easy to follow rules.....uses 4 factors (speed rating, track variant, distance of the present race, distance of the last race).....calculated estimated odds.....FREE DUTCHING TABLES allows betting on 2 or more horses with a guaranteed profit \$50.00

MON-3 and MON-4 (Howe Software).....Powerful utility programs enabling you to interact directly with your TRS-80 in MACHINE LANGUAGE.....The monitor comes with complete 40-page instruction manual making it useful for both the beginner and advanced programmer.....simple commands make it easy to use.....functions include DISPLAY, DISASSEMBLE, MOVE and COMPARE, SEARCH, MODIFY, RELOCATE, PRINT, READ and WRITE, UNLOAD, SAVE and READ, INPUT and OUTPUT, SEND and RECEIVE.....MON-3 \$39.95 (for cassette).....MON-4 \$49.95 (for disk).

(14) SMART TERMINAL (Howe Software).....enables your TRS-80 to be used as a remote terminal to a time sharing computer system \$69.95

(15) FAST SORT (Howe Software).....a series of machine-language subroutines to sort data from BASIC programs.....data may be alphabetic (string) or numeric.....easily interfaced with your BASIC programs (no machine language knowledge is necessary) \$9.95

(18) MAILING LIST (Howe Software).....maintains mailing lists of over 1000 names.....commands allow adding, changing, deleting, and finding names. Sorting is done in machine language subroutine.....labels printed in 1, 2 or 3 columns \$69.95

(17) HOME BUDGET (Howe Software).....combines the maintenance of your checkbook with analysis of your income, expenses and monthly bills. Handles data including bills, income, deposits, checks and debits to your checking account, and cash expenses. Computes checkbook balance, list of unpaid bills, monthly and year-to-date summaries of income and expenses showing income tax deductions.....All output printed on video display or line printer.....comes with complete instructions manual \$49.95*

(18) SMALL BUSINESS ACCOUNTING (Howe Software).....Based on the DOME BOOKKEEPING SYSTEM.....keeps track of all income, expenditures and payroll for a small business of up to 16 employees.....income and expenditures can be entered on a daily, weekly or monthly basis.....computes monthly and year to date totals.....manual contains complete instructions for customization Cassette version \$29.95.....Diskette version \$49.95

(19) REMODEL-PROLOAD (Racet Computes).....Renumber program lines.....move statements from one part of a program to another \$34.95

(20) GSF (Racet Computes).....Lightning fast in-memory machine language sort utility that can be made part of your BASIC programs without any machine language knowledge.....includes several other utilities to speed up your BASIC programs.....no machine knowledge necessary to use GSF in your BASIC programs \$30.00

(21) DOSORT (Racet Computes).....includes GSF (above).....extends the in memory sort to sorts on multiple disk drives \$45.00*

(22) COPSYS (Racet Computes).....allows the user to make copies of machines language cassettes without any knowledge of machine language \$20.00

(23) COMRPOC (Racet Computes).....an auto load program for disk users.....allows the user to insert a diskette into their MOD-III and have the computer take over all loading.....load a machine language program, BASIC, RUN a certain program all without pressing a single button.....allows your computer to perform 10, 20, 30 or more functions without pressing a single button \$30.00*

(24) INFINE BASIC (Racet Computes).....adds a variety of machine language subroutines to your BASIC programs (without any machine language knowledge).....fast sorts.....matrix operations.....compress and uncompress data.....and more \$60.00

(25) INFINITE BUSINESS (Racet Computes).....an add on package to INFINITE BASIC.....adds a variety of routines important to the businessman (increase accuracy of calculations and more) \$30.00

(28) OMS (Racet Computes).....lightning fast machine language sort.....sorts up to 4 disk drives of information \$90.00*

(27) BLINK (Racet Computes).....allows you to RUN new programs without losing the variables stored in your previous program.....line many programs together without losing important variables \$30.00*

(28) KFS-80 (Racet Computes).....now you can use ISAM (Index Sequential Access Files) on your MOD-III.....using ISAM in your BASIC programs allows instant access of your items in your data files.....use with mail programs.....inventory programs.....etc. \$100.00*

(29) MAIL LIST (Racet Computes).....all routines are in machine language allowing for quick access \$75.00

useful application programming features. Recently approved by ANSI, Subset G has given new life to PL/I, with manufacturer support for the Data General Eclipse and MV/8000 computers, Prime computers, Wang machines, and DEC's popular VAX computer.

Strangely, the refinements found in application languages follow those of hardware and operating systems. Large, cumbersome languages have been rejected in favor of simple, Spartan programming systems that are consistent in their design. The resulting languages are easier to implement, simpler to comprehend, and allow straightforward program composition.

PL/M: The Base for CP/M

In 1972, MAA (Microcomputer Applications Associates), the predecessor of Digital Research, consulted with the small, aspiring microprocessor division of a semiconductor memory company called Intel Corporation. MAA defined and implemented a new systems-programming language, called PL/M (*Programming Language for Microcomputers*), to replace assembly-language programming for Intel's 8-bit microprocessor. PL/M is a refinement of the XPL compiler-writing language which is, in turn, a language with elements from Burroughs Corporation's ALGOL and the full set of PL/I.

The first substantial program written by MAA using PL/M was a paper-tape editor for the 8008 microprocessor, which later became the CP/M program editor, called ED. PL/M is a commercial success for Intel Corporation and, although licensing policies have limited its general accessibility, it has become the standard language of the Intel microprocessor world, with implementations for the 8080, 8085, and 8086 families.

MAA also proposed a companion operating system, called CP/M (*Control Program for Microcomputers*), which would form the basis for resident PL/M programming. The need for CP/M was obvious: 8080-based computers with 16 K bytes of main memory could be combined with

System Languages

A system language is a high-level machine-dependent programming language used to implement so-called "system software," including operating systems, text editors, debuggers, interpreters, and compilers. In the early days of computing, virtually all system software was implemented in assembly language. One revolutionary machine, the Burroughs B5500, used a variant of ALGOL-60 as its only system-programming tool and appeared in the early 1960s. The machine was a commercial success against the other major mainframes, proving that assemblers were no longer necessary. Many successful system languages followed Burroughs' ALGOL, including the C language, produced at Bell Laboratories in the late 1960s, which served as the basis for the UNIX operating system.

A system language, by definition, matches the architecture of a particular machine or class of machines; all facilities of the machine are accessible in the language, and the language contains no non-trivial extensions beyond the basic machine capabilities. The benefit is that a compiler for the system language is easy to implement and transport from machine to machine, as long as the architecture of each machine is similar. Further, a system language requires little runtime support since application facilities, such as extensive I/O (input/output) processing, are not generally embodied in the language.

Refinements in system languages are made by increasing their usability. Their acceptance as replacements for assembly languages is encouraging. Today, one can publicly admit that system software is implemented in a high-level language without implying that it must be rewritten in assembly language to be effective.

Operating Systems

Operating systems, too, have become more refined. But why do we have operating systems at all? In the 1960s we used expensive mainframes with power-hungry central processors and magnetic-core memory. Downtime for complicated card readers, printers, and backup data-storage devices was high, requiring constant maintenance. A card-oriented "batch" operating system provided two functions. First, it allocated processor time, memory, and peripherals to application programs in an attempt to utilize each expensive component to its fullest. Second, common I/O subroutines were a part of the operating system to avoid duplication in each application program. In the early 1960s, batch operating systems began to incorporate online terminals that allowed the programmer to interact with the program—this is

where things became interesting. With an online terminal, a program could write a prompt message, read the data entered by the operator, and write a response almost instantly.

The crude terminal systems evolved into today's timesharing computers, where program interaction is the primary function, with batch processing in the background. General Electric and Digital Equipment Corporation led the way with BASIC-based 235 and multilingual PDP-10 computers. Countless timesharing operating systems followed, including IBM's interactive APL and CP/CMS, along with UNIX from Bell Laboratories. These timesharing systems were the forerunners of personal computing: all assumed that the hardware was too expensive to dedicate, so each terminal became an emulation of a single computer.

Shugart's new (at that time) floppy-disk drives to serve as development systems. For the first time, it was feasible to dedicate a reasonably powerful computer to the support of a single engineer. But the use of PL/M on larger timesharing computers was considered sufficient, and the CP/M idea was rejected.

The CP/M Family

CP/M was, however, completed by MAA in 1974. It included a single-user file system designed to eliminate data loss in all but the most unlikely situations, and used recoverable directory information to determine storage allocation rather than a traditional linked-list organization. The simplicity and reliability of the file system was an important key to the success of CP/M: file access to relatively slow floppy disks was immediate, and disks could be changed without losing files or mixing data records. And because CP/M is a Spartan system, today's increased storage-media transfer rates simply improve overall response. The refinements found in CP/M are based on its simplicity, reliability, and a proper match with limited-resource computers.

By the mid-1970s, CP/M added a new philosophy to operating system design. CP/M had been implemented on several computer systems, each having a different hardware interface. To accommodate these varying hardware environments, CP/M was decomposed into two parts: the invariant disk operating system written in PL/M, and a small variant portion written in assembly language. This separation allowed computer suppliers and end users to adapt their own physical I/O drivers to the standard CP/M product.

Hard-disk technology added yet another factor. CP/M customers required support for disk drives ranging from single 5-inch floppy disks to high-capacity Winchester disk drives. In response, CP/M was totally redesigned in 1979 to become *table-driven*. All disk-dependent parameters were moved from the invariant disk operating system to tables in the

Put Time and BSR/X-10 Control in Your APPLE II THUNDERCLOCK PLUS™

The THUNDERCLOCK PLUS is two peripheral systems on one card for your APPLE II, II PLUS, or III. An accurate, reliable, real-time clock/calendar and an interface for the popular BSR X-10 Home Control System.

The THUNDERCLOCK clock/calendar makes accurate time and date available to your programs: month, date, day-of-week, hour, minute, and second, in any of four software selectable formats. On-board batteries keep your THUNDERCLOCK running when your APPLE II is turned off - for up to four years before battery replacement. On-card 1K firmware makes reading or setting the time easy from APPLESOFT or INTEGER BASIC, PASCAL, or assembly language programs. And it provides software selectable interrupts at any of three rates: 64, 256, or 2048 interrupts/second. All features are software selectable - no switches or jumpers!

THE PLUS

Add THUNDERWARE'S X-10 ULTRASONIC INTERFACE

OPTION to your THUNDERCLOCK and your programs can send all 22 BSR X-10 commands so you can remotely control lights and appliances. Plus a powerful disk software package! The THUNDERWARE SCHEDULER software lets you create schedules to control lights, appliances, security systems, or almost any other electrical device. The software includes: SCUTIL - the SCHEDULER utility that lets you make or change a schedule, and SCHED - executes your schedules in real-time using the THUNDERCLOCK. SCHED runs in the 'background' so you can run other programs in the 'foreground'. Our PASCAL software lets you use all the THUNDERCLOCK'S features and sets the file date whenever you boot. The THUNDERCLOCK PLUS is a SYSTEM for your APPLE II. Supported by intelligent, easy to use firmware, a powerful software package, and good documentation!

Let the THUNDERCLOCK PLUS time/date stamp your DOS files whenever you create or modify them with our DOS-DATER software.

The THUNDERCLOCK PLUS will work in any APPLE, including the APPLE III.

See your APPLE dealer.

the process. You can, for example, send the name of a disk file to the spooler and, while the file is being printed, edit another file in preparation for compilation. The spooler and editor share processor time to complete their respective tasks. In general, many such processes share processor time and system resources.

MP/M process communication is performed through *queues* (or waiting lines) managed by the nucleus. The spooler, for example, reads file names from an input queue posted by another process (which reads spooler command lines from

the console). When the spooler is busy printing a file, additional file names may enter the input queue in a first-in first-out order.

Process synchronization through queuing mechanisms is commonplace, but MP/M treats queues in a unique manner, simplifying their use and decreasing queue management overhead. Queues are treated as files: they are named symbolically so that a queue can be added dynamically. Like files, queues have queue control blocks that are created, opened, deleted, written, and read. In fact, the set of queue operations closely

matches the file functions of CP/M so that MP/M provides a familiar programming environment.

The implementation of queues is transparent to an operator or system programmer, but it is important to MP/M's effective operation on limited-resource computers. Queues are implemented through three different data structures, depending upon the message length. So-called "counting semaphores" count the occurrence of an event with message length zero, and are implemented as 16-bit tallies. Single-byte messages are processed using a circular buffer. Similarly, queues containing addresses are processed using circular buffers. In all other cases, MP/M uses a general linked list, which requires additional space and processing time. It is this sensitivity to the capabilities of limited-resource computers that makes MP/M effective: while real-time operating systems often incur 25 to 40% overhead, MP/M has been streamlined to increase available compute time by 7% over single-user CP/M.

Like CP/M, MP/M is separated into variant and invariant portions. The file-system interface is identical to that of CP/M, with the addition of user-defined functions to handle non-CP/M operations (such as control of the real-time clock). Field-reconfiguration of MP/M allows a variety of device protocols including CP/M-style busy-wait loops, polled devices, and interrupt-driven peripherals. In fact, the variety of interface possibilities makes the MP/M implementer a true system-software designer, since a fine-tuned MP/M system may operate considerably faster than its initial implementation.

What are the refinements found in MP/M? First, it is a state-of-the-art operating system based on current process-synchronization technology and microprocessor real-time system design philosophies. Process communication is conceptually simple and requires minimal overhead. Finally, it is the only operating system of its type that can be field-tailored to match almost any computer configuration.

CALIFORNIA COMPUTER SYSTEMS HIGH IN QUALITY. LOW IN PRICE

Z80 CPU, 4 Mhz, with one serial port; 12 slot S-100 mainframe, disk controller, 64K Dynamic Ram, CP/M 2.2® \$1,645.
 Sorry, we cannot guarantee this price after June 20th.

Interfaced to 2 Shugart 8", single sided, double density drives mounted in our own, beautiful MAX BOX with power supply and fan \$1,250.
 A complete S-100 system for under \$3,000. THE BEST BUY ON THE MARKET.

IMS 5000 and 8000 Systems

Outstanding long term reliability and performance. These systems feature a Z80A CPU, S-100 bus; double density drives (either single or double sided), DMA disk controller, 64K RAM, 2 serial & 1 parallel port. Prices include the very finest implementation of CP/M® available in the entire industry. Hard disk and multi user software options.
 Desk top or desk enclosed. 5000 DT with dual, single sided mini drives.
 8000 DT with dual single sided 8" drives

PER SCI—THE KING AND QUEEN OF DRIVES!

Model 299B: Dual headed drives, total 3.2 MB unformatted. \$2,300.
 Model 277: Dual 8 inch drives, voice coil positioned, IBM compatible, 1600 K BYTES per drive, unformatted \$1,210.
 Slimline cabinet and power for either 277 or 299 \$ 300.

DRIVES

The MAX BOX: Manufactured by John D. Owens Associates. 8" dual drive cabinet complete with power supply & fan. Will hold Qumes, Shugarts or Siemens. Excellent design and engineering \$ 325.
 With 2 Shugart 800R drives \$1,250. With 2 QUME Double sided drives \$1,650.

MPI B51... \$265.	B52... \$365.	B92... \$500.	Shugart... \$ 450.

CP/NET

CP/NET, introduced in late 1980, leads a series of network-oriented operating systems that distribute operating system functions throughout a network of nonhomogeneous processors. CP/NET connects CP/M requesters to MP/M servers through the use of an arbitrary network protocol. Similar to CP/M and MP/M, CP/NET consists of the invariant portion, along with a set of field-reconfigurable subroutines that define the interface to a particular network. For purposes of CP/NET, this interface need only provide point-to-point data-packet transmission. Since the actual data transmission media are unimportant to CP/NET, any one of the number of standard protocols can be used, from low-speed RS-232C through high-speed Ethernet. Physical connections are also arbitrary, allowing active hub-star, ring, and common-bus architectures.

The invariant portions of CP/NET operate under a standard CP/M system to direct various system calls over the network to an MP/M server. The MP/M server, in turn, responds to network requests by simulating the actions of CP/M. This simulation is transparent to an application program: any program operating under standard CP/M operates properly in the network environment.

Suppose, for example, you wish to store common business letters in a central data base under MP/M and access these letters from a CP/M-based word processor. You begin by assigning one local disk drive to the MP/M master, using the CP/NET interface. You then direct your word processing system to read the particular letter on the assigned drive, causing the data to be obtained from the server rather than from the local disk. After local update using your word processor, you can print the result on your local printer or optionally assign your listing device to the network for printing at the MP/M server.

CP/NET is accompanied by three related network operating systems: CP/NOS, MP/NET, and MP/NOS. CP/NOS is, in effect, a diskless

CP/M, which can be stored in read-only memory, and that operates with a console, memory, and network interface. MP/NET, on the other hand, is a complete MP/M system with an embedded network interface that, like CP/NET, allows local devices to be reassigned to the network. MP/NET configurations allow MP/M systems as both requesters and servers with CP/M requesters. Finally, MP/NOS contains the real-time portion of MP/M without local disk facilities. Like CP/NOS,

MP/NOS performs all disk functions through the network.

The interface protocol is publicly defined so that non-MP/M or non-CP/M systems can participate in network interactions. A server interface for the VAX 11/780, for example, is under preparation so that it can perform I/O functions for a large number of MP/M and CP/M requesters.

The principal advantage of CP/NET is that all CP/M-compatible software becomes immediately available for operation in the network en-

THE NEW NEVADA COBOL!

**At \$149.95 you can't buy
a better COBOL or one
residing in less memory.**

Now with the new Nevada COBOL, you can use the programs developed by professional business programmers over the past twenty years to run the big IBM machines. And you can develop and tailor programs on your micro and run them on your micro or recompile and run them on any mainframe computer. What's more you can do it for about one-fifth the cost of comparable COBOL compiler systems.

Almost all the popular microcomputers work with the CP/M operating system we use including Apple, TRS-80, North Star, Superbrain, Cromemco and so on.

Check the features; you'll go Nevada COBOL.

A powerful subset of ANSI-74, Nevada COBOL requires a scant 16K of RAM. It's available on 8" CP/M standard single density or 5-1/4" diskettes. Price includes diskette and manual. Price for manual only, \$24.95.

Four COBOL applications packages available too.

Four COBOL applications packages are currently available. Each is priced at \$24.95 for the diskette. The 73 page manual covering all four applications costs an additional \$24.95. The manual carries complete COBOL source code listings and superior documentation.

Package #1 is the Budget Plan Report Generator. Here's an extraordinary time saver and planning aid for both start-up and well established businesses.

Package #2 is the Personal Financial Planner to give you some eye opening insights into your own personal spending habits.

Package #3 is Labels so you can print name and address labels.

Package #4 is Pre-COBOL for use as a pre-processor of COBOL source programs. A great programming aid.

Order today or write for complete details.

Phone (415) 751-1522 or address Ellis Computing, 600 41st Ave, San Francisco, CA 94121. Nevada Cobol is also available at Lifeboat Associates, Discount Software, Westico, Business Micro Products, Computer Information Exchange and other quality computer stores. Mastercard, Visa, C.O.D.s, or checks accepted. California orders please include sales tax.

CP/M, TRS-80 and IBM are TM's of Digital Research, Tandy Corp and IBM, respectively.

ELLIS COMPUTING
SOFTWARE TECHNOLOGY

vironment, solving the problem that builders of network hardware face: the total absence of application software. Although the promise is there, networking is in its infancy, and CP/NET is truly a software package awaiting the evolution of suitable hardware.

PL/I: The Application Language

In 1978, Digital Research investigated the final level of software support: application languages. One such language was to be supported throughout the operating system product line, and the choice would have to be a multipurpose language. Further, the language would have to be an international standard to promote the generation of software by independent vendors. Standard Pascal seemed a logical choice but was rejected for several reasons. First, Pascal is an ALGOL derivative with scientific orientation. Commercial facilities in the standard language are absent: decimal arithmetic, file processing, string operations, and error-exception handling were essential. Further, separate compilation and initialization of tables were not in the language. There was a temptation to extend Pascal in order to include these features, but these extensions would have defeated the benefits of standardization.

PL/I Subset G was the obvious choice. It satisfied scientific and commercial needs and, because of subset restrictions, was consistent and easy to use. The project was a bit daring, however, because Subset G was unknown in the computer community. PL/I was viewed as a large IBM-oriented language with huge, inefficient compilers that required tremendous runtime support.

The Digital Research implementation of Subset G was started in mid-1978 and completed two years later. The compiler is a three-pass system written in PL/M. The first two passes are machine independent and produce symbol tables and intermediate language suitable for any target machine. The third pass is largely machine dependent and is dedicated to code optimization and final ma-

chine-code production. The compiler is accompanied by a linkage editor (compatible with the Microsoft format), a program librarian, a set of runtime subroutines, and a relocating macro assembler.

Thus, PL/I completes the final level of the inverted pyramid of support tools. The message should be clear to the application programmer: it is not the system language or the operating system which is important in the production of a final application. Rather, it is the availability of a standard, widely accepted application language that can provide program longevity. Once expressed in PL/I Subset G, the program can be transported through the CP/M family of operating systems to a variety of minicomputer systems. Digital Research has a long-term commitment to PL/I support for popular operating systems and processors.

New Processor Architectures

We've spent little time discussing processor refinements. What is happening to our software tools as we augment our 8-bit machines with the more powerful 16-bit processors? Will 16-bit processors replace 8-bit machines, or are they simply a temporary phenomenon in the transition to 32-bit machines?

There are several considerations when answering these questions. First, 8-bit machines are economical to produce, their software systems are mature, and they satisfy the needs of a substantial computer base. Therefore, we can safely assume that 8-bit machines are here to stay. Newer 16-bit machines are marginally faster, but they have substantially more address space. To use this additional address space, the computer must contain more memory, which increases the computer system cost.

As system costs increase, the margin between low-end minicomputers and high-end microcomputers diminishes, placing microcomputer hardware and software manufacturers such as ourselves in direct competition with major minicomputer manufacturers. The 16-bit machines, by their nature, introduce memory segmentation problems that are not

C.O.D.'s ACCEPTED

present in 32-bit processors.

Finally, we should note that 16-bit minicomputers are already outmoded, and all serious manufacturers are pushing 32-bit machines. This leads to the following conclusion: if we are tracking the minicomputer world, we can assume that the future will be with the 32-bit processors.

Currently, however, 32-bit machines are not available in quantity. Even when they are available, there will be delays while manufacturers tool up for production. At the moment, the 16-bit processors offer an intermediate solution. Digital Research has provided initial support for Intel's 16-bit machines—iAPX-186 and iAPX-286—which are versions of its 8086 product line. Intel provided PL/M-86, rehosted from the 8080 line, which was used by Digital Research to generate CP/M-86 and MP/M-86. In both cases, the fundamental design remains basically the same as that of the 8-bit version, with the addition of memory management and enhancements to the file system that match new computing resources.

A familiar program environment is retained so that program conversion is simplified.

CP/NET and related network software will be available sometime this year. Intel's 8087 (an arithmetic coprocessor for the 8086) is of particular interest since it directly supports binary and decimal operations, which substantially increase PL/M-86 execution speed.

In addition to the 8086, the CP/M family will be adapted to the 16-bit machines that prove popular, with special interest in the 32-bit architectures as they become available. During this development and rehosting, however, the 8-bit processors will continue to be supported with new tools and facilities, since this constitutes, without doubt, our best customer base for some time to come.

Software Vendors

We've concerned ourselves with three levels of software tools that support the most important level: the application programs. A major reason for CP/M's popularity is the general

availability of good application software. At last count, there were about 500 commercially available CP/M-compatible software products.

Through the combined efforts of CP/M distributors, independent vendors, and CP/M users, we are participating in a software commodity market with quality and variety that is unequaled by any minicomputer or mainframe manufacturer. The large CP/M customer base allows a vendor to produce and support a software package at low end-user cost. This increases the customer base, drawing more vendors with lower-cost good-quality products. This cyclic effect is, today, solving the "software crunch."

The tools are available, and it is the responsibility of independent software vendors to continue developing their own specialized markets. In this way, computer software technology will reach virtually all application areas where low-cost, reliable computing is required. Refinements? My friend, they're up to you. ■

Price-Performance Breakthrough at OMIKRON™

OMIKRON has set new Price-Performance standards in the micro-computer industry with the formation of **COUGAR** - the official **Omikron** Users Group.

All purchasers of our **MAPPER I** CP/M* Adaptor for the TRS-80 Model I are now eligible to receive Omikron's newsletter, the **OMIGRAM**--- offering the **very best** in CP/M Software at **unprecedented** group purchase rates.

LIST—A Source-Listing Program for the C Language

Jeff Taylor, The Toolsmith
POB 22511, San Francisco CA 94122

Most UNIX-system utilities read from a standard input device and write to a standard output device. The Whitesmiths C compiler shows its heritage by doing the same. Until it informs you, for example, that there is a semi-

About the Author

Jeff Taylor is the owner of The Toolsmith, a software house. He received his bachelor's degree and did graduate work in electrical engineering, specializing in computer science, at the University of California, Davis.

colon missing on some line, you don't notice that the source listing isn't being printed. LIST is a program to print source listings. (See listing 1.) Each line is labeled like the compiler's error listing. The version presented here is a system note, and you will probably want to add more features.

LIST reads the files named on command line and writes the listing to the standard output. If the files are not named, input is taken from the standard input. The standard input and output default to the user's terminal but can be redirected to or from other devices or files, such as the line printer. Each file's listing starts a new page. At the top of each page is the file's name, the page number, and the date. Obtaining the date from the operating system depends upon your equipment; the code shown is for RT-11. The function DATE returns the number of bytes in the date and puts the date's character string in its single argument.

The C language allows an `#include` statement. The preprocessor pass of the compiler replaces the `#include` statement with the contents of the file it names. As an option, LIST can insert the contents of the file after the `#include` statement. The `-n` flag on the command line turns on `#include` processing for nonheader files. The `-h` option includes header files. Header files are those with the extension `.H` (such as `STD.H`, which is the standard header file supplied by Whitesmiths). The depth to which `#include` can be nested depends on your stack size. Listing 1 was printed by the command:

```
list -n > lp: list.c
```

where `lp:` is the line printer. The `#include` processing was performed excluding header files. The angle brackets (`<` and `>`) indicate redirection of the standard input and output, respectively.

The subroutine PAGINATE uses a technique that is described in *Principles of Program Design* by M A Jackson. If each print line could be read from a scratch

STRETCHTM THE POWER

Of Your HP-85 or Commodore Pet/CBM With TNW's IEEE-488 Bus System Building Blocks...

TNW's RS-232 SERIAL INTERFACES

Connect your PET/CBM to any RS-232 Serial Printer, Plotter, CRT Terminal, Modem, or other device:

TNW-1000	ONE CHANNEL OUTPUT ONLY	\$129
TNW-2000	ONE CHANNEL INPUT AND OUTPUT	\$229
TNW-232D	TWO CHANNELS, INPUT & OUTPUT. 12 RS-232 CONTROL SIGNALS	\$369

TURN YOUR PET INTO A TERMINAL

Access Timesharing Systems and Bulletin Boards with TNW's Pterm Software and full service telephone modem:

TNW-103	AUTO ANSWER/AUTO DIAL USE WITH DAA	\$389
----------------	---------------------------------------	--------------

Pterm also works with acoustical couplers and other modems interfaced to the PET with the TNW-2000 or TNW-232D. Electronic mail and TWX Terminal programs also available. All units are addressable IEEE-488 devices, complete with power supply cabinet, full documentation and one year warranty.

COMPUTERS—TERMINALS—MODEMS!

MODEMS AND COUPLERS

Connect your Apple, TRS-80 or any other computer or terminal to the phone lines!

Penril

**Penril
300/1200**

Penril 300/1200—Bell 212A style \$799
Bell 212A style. 1200 baud and 300 baud. Manual originate, auto-answer. Full duplex. RS232. Direct connect to phone lines via RJ11C standard extension phone voicejack. 1 year warranty.

U.S. Robotics
USR-330A
Bell 103/113 style
USR-330D
Bell 103/113 style

USR-330D \$339

Bell 103/113 style. 330 baud. Manual originate, auto-answer. Half/full duplex. RS232. 1 year warranty. Direct connect to phone lines via RJ11C standard extension phone voice jack.

USR-330A \$399
Same as USR-330D but includes auto-dial capability.

U.S. Robotics
**The
Phone Link
Acoustic
Modem**

Bell 103/113 style \$179
300 baud. Sleek, low profile. Originate and answer capability. Half/full duplex. Self-test. RS232. Light displays for On, Carrier, Test, Send Data, Receive Data. 15 oz.

Digital Equipment Corporation

DEC VT100

DEC VT100 ... \$1668

Detachable keyboard. Separate numeric keypad with function keys. Business forms character set. Reverse video. Selectable double-size characters. Bidirectional smooth-scrolling. 80 cols or 132 cols. Split screen. Settable tabs. Line drawing graphic characters. Status line. Key-Click.

CRT's Perkin-Elmer
Corporation

Superowl 1251

Perkin-Elmer Superowl 1251 \$1564
Intelligent, editing CRT. Detachable keyboard. 32 fully programmable function keys. Intelligent printer part. Business forms character set. Block mode. Protected fields. Blinking fields. Numeric fields. Reverse video. Half intensity. Polling. Down line loading of options. Remote control of all options by host computer. Settable tabs. Status line. Separate numeric keypad. Transparent mode.

Perkin-Elmer Corporation

Bantam 550B \$694
Compact. Silent. Upper/lower case. 80th col. wrap-around. Bell. Integrated numeric pad. Printer port. Transparent mode. Editing features. Tabbing.

Bantam 550E...\$755
Same as 550B plus separate numeric key-pad and cursor direction keys.

Bantam 550S \$879
Same as 550E plus block mode. 8 function keys, and protected fields, reverse video fields, half intensity fields, blinking fields.

HARDCOPY TERMINALS

**Teletype
Model 43**

Teletype
Corporation

Teletype Model 43 KSR with RS232
and Connector Cable \$999
30 CPS. Dot matrix. 132 cols. Truedescenders on lower case. Excellent print quality for dot matrix printer. Pin feed.

NEC Corporation
NEC Spinwriter 5510 & 5520

5520 KSR Spinwriter \$3088
55 CPS. Impact printer. Selectric print quality. Changeable print fonts. 110, 300 and 1200 baud data rate. Numeric keypad. Friction and tractor feed.

5510 Spinwriter \$2754
55 CPS. Impact printer. Selectric print quality. Changeable print fonts. 110, 300 and 1200 baud data rate. Friction and tractor feed.

& PRINTERS

DEC LA120

Digital Equipment
Corporation

DEC LA120 ... \$2388

180 CPS. Dot matrix. Upper/lower case. 1K buffer. Designed for 1200 baud communications. 30 character answerback message. Adjustable line spacing. Adjustable character sizes including double sized characters. Settable horizontal and vertical tabs. Top-of-form capability. RS232.

Perkin-Elmer
Corporation

**Pussycat 650/655
CRT Screen Printer**

650/655 Pussycat CRT Screen Printer. \$899
100 CPS. Extremely compact and quiet. 110 to 9600 baud rate. 2K buffer. Ideal for producing rapid, reliable hardcopy of your CRT screen display. Can be added to any CRT with our interface option.

550 Options

20mA Current Loop Interface \$70
Non-Glare Screen \$25
2nd page of memory (550S only) .. \$100

DEC LA34DA ... \$939

30 CPS. Dot matrix. Upper/lower case. 4 character sizes. Up to 217 cols per line. 6 lines per inch settings. Friction feed. Settable tabs. RS232.

DEC LA34AA \$1095
30 CPS. Dot matrix. Upper/lower case. 8 character sizes including double size characters. 6 lines per inch settings. Up to 217 cols per line. Friction feed. Settable horizontal and vertical tabs. Top-of-form capability.

Options for LA34AA and LA34DA

Tractor Feed Mechanism \$114
Numeric Keypad w/ Function Keys.. \$69
Pedestal..... \$100
Paper Out Sensor \$25
APL Capability with APL Keycaps .. \$499
2K Buffer with Text Editor and 1200 Baud
Communications Capability \$499

Leasing rates and lease/purchase plan information is available on request.
All equipment is shipped with a 10 day money back guarantee.
We offer full service, on site maintenance plans on all equipment.
All equipment in stock.

ALL THESE FEATURES... IN THIS SMALL SPACE... AT THIS LOW PRICE!

Greater computer power . . . fewer separate components . . . larger capability . . . simpler to operate . . . modular maintenance . . .

4,695

These are the unique benefits of the Quasar Data QPD-100 Floppy Disk Computer . . . plus unsurpassed reliability . . . plus 12-month warranty on all PC boards.

Its highly reliable, industry-standard MFE drive is compact. Accepts both single AND double-sided disks.

Upgradeable from the Z-80[™] microprocessor-based system to our 16 BIT microprocessor-based system by simply plugging in extra PC cards. Hard disk and multi-user systems available.

As your requirements grow, your QDP-100 can grow to fit them.

The Quasar Data QDP-100H is a larger version with 6-megabyte capacity; includes one double-sided floppy and one 5¼ microwinchester hard disk.

Both the Quasar Data QDP-100 and QDP-100H are fully compatible with all standard terminals.

Phone or write for descriptive bulletin and specifications. And ask for a demonstration. Dealer inquiries invited.

QUASAR DATA'S QDP-100 COMPUTER SYSTEM.

FEATURES
Z-80, 4-MHz CPU
64K memory, bank selectable
Two (2) double-sided, double-density 8" floppies, 2 megabytes
Four (4) ports...2 serial, 2 parallel
Double-sided, double-density disk controller, to 4 MB
CP/M 2.2 DOS. MP/M multi-user operating system. (Optional)
S-100 (IEEE) motherboard
BASIC LANGUAGE . . . C-BASIC compiler
Real-time clock
Monitor in PROM
Manuals supplied: All documentation and schematics, including "CP/M Handbook" by Sybex.
Accounting systems: G/L, A/R, A/P, P/R, included.

18" wide
16 7/8" deep
11" high

<p>HARD DISK MULTIPLEXOR WITH 10 MEG HARD DISK FOR THE TRS-80* Mod II</p> <p>NOW YOU CAN HAVE THAT LARGE COMMON DATA BASE!!</p> <ul style="list-style-type: none"> Allows up to 4 Mod II's to connect to a single controller — up to 4 hard disk drives per controller. Users may access the same file simultaneously (first-come first-served). Uses Cameo controller and standard 10-megabyte cartridge (hard) disk drives along with RACET Hard/Soft Disk System (HSD) software. Access times 3 to 8 times faster than floppy. Mixed floppy/hard disk operation supported. Compatible with your existing TRSDOS programs! All BASIC statements are identical. A single file may be as large as one disk. Alternate mode allows 24-million byte record range. Directory expandable to handle thousands of files. Includes special utilities — backup and copies, HPURGE for multiple deletions, HDOS directory catalog system, and Hard Disk Superzap. FORMAT utility includes options for specifying sectors/gran, platters/disk, logical disk size, etc. <p>HARD DISK DRIVE & CONTROLLER \$5995 RACET HSD Software \$400 Call for multiuser pricing. Dealers call for OEM pricing.</p> <p>INFINITE BASIC (Mod I & III Tape or Disk) Mod I \$50.00, Mod III \$60.00 Extends Level II BASIC with complete MATRIX functions and 50 more string functions. Includes RACET machine language sorts! Sort 1000 elements in 9 seconds!! Select only functions you want to optimize memory usage.</p> <p>INFINITE BUSINESS (Requires Infinite BASIC) Mod I & III \$30.00 Complete printer pagination controls — auto headers, footers, page numbers. Packed decimal arithmetic — 127 digit accuracy +, -, *, /. Binary search of sorted and unsorted arrays. Hash codes.</p> <p>BASIC CROSS REFERENCE UTILITY (Mod II 64K) \$50.00 SEEK and FIND functions for Variables, Line Numbers, Strings, Keywords. 'All' options available for line numbers and variables. Load from BASIC — Call with 'CTRL'R' Outout to screen or printer!</p> <p>DSM Mod I \$75.00, Mod II \$150.00, Mod III \$90.00 Disk Sort/Merge for RANDOM files. All machine language stand-alone package for sorting speed. Establish sort specification in simple BASIC command File. Execute from DOS. Only operator action to sort is to change diskettes when requested! Handles multiple diskette files! Super fast sort times — improved disk I/O times make this the fastest Disk Sort/Merge available on your TRS. (Mod I Min 32K 2-drive system. Mod II 64K 1-drive. Mod III 32K 1-drive)</p>	<p>★ ★ NEW ★ ★ DISCAT (32K 1-drive Min) Mod I, III \$50.00 This comprehensive Diskette Cataloging/Indexing utility allows the user to keep track of thousands of programs in a categorized library. Machine language program works with all TRSDOS and NEWDOS versions. Files include program names and extensions, program length, diskette numbers, front and back, and diskette free space.</p> <p>★ ★ NEW ★ ★ KFS-80 (1-drive 32K Min — Mod II 64K) Mod I, III \$100.00; Mod II \$175.00 The keyed file system provides keyed and sequential access to multiple files. Provides the programmer with a powerful disk handling facility for development of data base applications. Binary tree index system provides rapid access to file records.</p> <p>★ ★ NEW ★ ★ MAILLIST (1-drive 32K Min - Mod II 64K) Mod I, III \$75.00; Mod II \$150.00 This ISAM-based mailist minimizes disk access times. Four keys — no separate sorting. Supports 9-digit zip code and 3-digit state code. Up to 30 attributes. Mask and query selection. Record access times under 4 seconds!!</p> <p>★ ★ NEW ★ ★ LPSPOOL (32K 1-drive Min) Mod I \$75.00 LPSPOOL — Add multi-tasking to permit concurrent printing while running your application program. The spooler and despooler obtain print jobs from queues maintained by the system as print files are generated. LPSPOOL supports both parallel and serial printers.</p> <p>UTILITY PACKAGE (Mod II 64K) \$150.00 Important enhancements to the Mod II. The file recovery capabilities alone will pay for the package in even one application! Fully documented in 124 page manual! XHIT, XGAT, XCOPY and SUPERZAP are used to reconstruct or recover data from bad diskettes! XCOPY provides multi-file copies, 'Wild-card' mask select, absolute sector mode and other features. SUPERZAP allows examine/change any sector on diskette include track-0, and absolute disk backup/copy with I/O recovery. DCS builds consolidated directories from multiple diskettes into a single display or listing sorted by disk name or file name plus more. Change Disk ID with DISKID. XCREATE preallocates files and sets 'LOF' to end to speed disk accesses. DEBUGII adds single step, trace, subroutine calling, program looping, dynamic disassembly and more!!</p> <p>DEVELOPMENT PACKAGE (Mod II 64K) \$125.00 Includes RACET machine language SUPERZAP, Apparatus Disassembler, and Model II interface to the Microsoft 'Editor Assembler Plus' software package including uploading services and patches for Disk I/O.</p>

MICROBYTE INTRODUCES MORE PROFIT FOR YOUR BOTTOM LINE

32K STATIC MEMORY BOARD

- Fully S100 bus compatible, IMSAI, SOL, ALTAIR, ALPHA MICRO
- Uses Intel low-power 2141L-4 4Kx1 Static RAM
- 2 MHz or 4 MHz operation
- Gold contacts for higher reliability
- Thermally designed heat sink (board operating temperature 0-70 °C)
- Commercially designed power bus; 7 ground bus bars; 0.1 uf decoupling capacitors
- Fully tri-state buffered
- Inputs fully low-power Schottky Schmitt Trigger buffered on all address and data lines
- Phantom is jumper selectable to pin 67
- Each 4K bank addressable to any 4K slot within a 64K boundary
- 4K hardware or software selectable
- One on-board 8-bit output port enables or disables the 32K in 4K blocks
- Selectable port address
- 4K banks can be selected or disabled on power on clear or reset
- Will operate with or without front panel
- Compatible with Alpha Micro, with extended memory management for selection beyond 64K
- No DMA restriction
- Low power consumption 800mA
- Fully warranted for 120 days from date of shipment

Z-80A I/O

- A complete single board Z-80A CPU with serial/parallel interface
- Fully compatible with the proposed IEEE S-100 Bus Standard
- Z-80A CPU (4MHz version of the Z-80)
- 158 instructions—superset of and upward compatible from the 8080's 78 instructions
- Up to 4K of on board Eprom with optional Z-80 monitor program — 1K(2708), 2K(2716) or 4K(2732)
- Full vectored interrupt capability
- 2MHz or 4MHz operation is jumper selectable
- Selectable auto-wait state insertion for extending M1*, MREQ*, IORQ* and/or on board ROM
- Dual RS-232 serial I/O ports using the Z80A-DART with individual baud rate selection (16 baud rates from 50-19,200 baud)
- Up to 24 bit parallel I/O port—fully programmable Intel 8255A
- Up to 8 separate counter/timers using 2 Z-80A CTC

DISK CONTROLLER

- DMA to within 16M byte of memory
- State-of-the-art NEC765 LSI Controller
- IEEE-S100 compatible
- DMA arbitration allows use of multiple boards within a system
- PLL data recovery for totally reliable operation
- Write pre-comp switched at mid-disc for reliable double density operation
- Supports up to four (4) drives
- Power On, Power Off or Reset deselects drives to avoid damaging files
- Drive deselect Time Out, deselect drives not in use
- Single or double sided operation
- Single density/double density operation
- 8" standard drives
- Separate VCC supply for data recovery to eliminate possible noise problems

64K DYNAMIC RAM BOARD

- Fully S-100 bus compatible/Alpha Micro compatible
- 64K x 8 bit dynamic RAM
- Low power: + 8VDC @ 700 ma
+ 16VDC @ 100 ma
- 16VDC @ 25 ma
- Built-in-parity with LED indicator and vector interrupt
- Memory addressable in four 16K banks
- Hidden refresh
- Gold contacts for high reliability
- 72-hour Burn-in
- Memory mapped via DIP switch
- Built-in programmable write-protect
- Programmable control port for parity and bank control

MICROBYTE has the products — from memory boards to complete S-100 systems, and we offer the rest of the value cluster — call today for the whole story on how you can become a Micro-byte dealer.

4 PORT I/O

- Quad RS-232C Serial Ports, One 20mA Current Loop Port
- Fully IEEE S-100 Bus Compatible
- Asynchronous Communications with Z80A-Dart(TM) or Synchronous Communications with Z80A-SIO/0(TM)
- Full Set of Modem Control Signals, including RI (Ring Indicator)
- Easily Configurable to Any Type of Terminal Interface
- I/O Servicing Environments: (1) Polled; (2) Bus Vector; (3) Z80 Mode 2 Vector
- Off-Board Interrupt Daisy Chain Capability
- Special Receive Conditions: (1) Framing Error; (2) Parity Error; (3) Receiver Overrun Error
- Baud Rates Selected Individually from 50 Baud to 300K Baud
- 72 Hour Burn-In

if He'd used select[™] it wouldn't have taken seven days

Learn SELECT^{*} in just 90 minutes. A whole new word processing software concept that kicks the coded key habit and frees you from complicated instruction manuals. *SELECT* is fast. *SELECT* is logical. With single key mnemonics, you'll use dozens of commands that instantly access the rich capabilities of this system. There's nothing like it.

- Simply hit "C" and you'll be ready to Create a document.
- Key "I" and you'll be in the Insert mode.
- Key "M" and Move entire blocks of text . . . and key dozens more.

That's all there is to it. You'll get all that word processing software promises . . . plus a few surprises.

SELECT with SUPERSPELL.^{*} The only microcomputer software with an integrated spelling dictionary. To proof your text all you do, of course, is to key "S". *SUPERSPELL* with its 10,000 word dictionary scans your text at computer speed then displays and corrects all your typing errors. You can increase *SUPERSPELL*'s word power and customize the dictionary by adding new words, one at a time. Ask to see it today at your local dealer.

SELECT with SUPERSPELL . . . just a little byte more.[™]

SELECT will run on any machine that uses CP/M or MP/M^{**} or its derivatives. It needs 40K of RAM and two disk drives. Special version now available for Radio Shack Mod II^{***} and Apple II^{****}.

^{*} SELECT and SUPERSPELL are trademarks of Select Information Systems Inc.
^{**} CP/M and MP/M are trademarks of Digital Research
^{***} A trademark of Tandy Corp.
^{****} A trademark of Apple Computer Inc.

list.c      90:  }
```

Text continued from page 234:

file, this is what the subroutine would look like in pseudocode:

```
read line;
while(not end of file) {
    do page header;
    while(not (end of file || bottom of page)) {
        print line;
        read line;
    }
    do page footer;
}
```

For efficiency and simplicity, a *pointer* to each line is *passed* to PAGINATE instead of read from a file. A NULL pointer indicates end-of-file. The usual method is to turn the code inside out around the read statements. Jackson advocates keeping the structure the same and replacing each read statement by an assignment to a state variable, a return statement, and a label. The state variable serves as a "bookmarker," so that execution can resume where it left off. A switch statement at the subroutine entrance will jump to the proper label on the next call. This technique may not be well received by the more fanatical GOTOless programming advocates, but this

was the first paginate subroutine I have written that worked perfectly on the first try. In PAGINATE, the page counter is used as the state variable. If PAGE equals 0, then execution continues at the first read statement; otherwise, it jumps to the read in the innermost loop.

LIST did not spring full-blown from an exhaustive design process but evolved over a period of time. As with most computer efforts, I had only a general idea of the requirements—features were added, removed, and generalized. The header-file exclusion option originally only affected the standard header file STD.H. Functions were moved around within the code to tighten up the structure or to generalize a subroutine. Concatenating the file name, line number, and source line was originally done in PAGINATE. Moving it out allowed PAGINATE to be used in other programs. Several extensions are being contemplated, but the cost (in time) to implement them exceeds the cost of not having them. Being able to exclude an include file by name (`-x filename`) would be useful on large programs with a lot of previously developed code. When the preprocessor conditional compilation statements `#if` and `#ifdef` are used, it's practical to have LIST handle them correctly. Each of these extensions would, however, require more time to implement than the existing program. ■

If your accounting system is in the Dark Ages, you should talk to **Systems Plus**

Accounting Plus brings up-to-the-minute accounting power to the microcomputer industry.

Accounting Plus is an extremely easy-to-use, fully integrated seven-module accounting system. It includes complete data entry prompting, extensive error checking and one-time-only data entry features.

Accounting Plus features: General Ledger, Accounts Receivable, Accounts Payable, Inventory, Sales Order Entry, Purchase Order Entry and payroll.

Accounting Plus is a comprehensive on-line system, with all transactions applied immediately, and results accessible without long delays associated with batch-type transactions.

Invoices, statements, checks, purchase orders and sales orders are prepared using pre-printed standard forms.

If you are ready to enjoy solid software that create functional and easy installations, call **Systems Plus**

Our software operates under CP/M[®], MP/M[®], or CDOS[™] operating systems. Yesterday's dreams are available today, off the shelf.

The UNIX Operating System and the XENIX Standard Operating Environment

Robert B Greenberg
XENIX Product Manager
Microsoft
10800 NE Eighth, Suite 819
Bellevue WA 98004

Never has there been a greater demand for software that is easy to use and maintain, and independent of the hardware on which it runs. As the price of software rapidly outpaces that of computers, the need to increase software productivity and reduce duplication of effort has become paramount.

Microsoft's XENIX operating system offers one solution to the software crisis developing in the microcomputer world. Unlike the operating systems offered for 8-bit machines, the XENIX system is a powerful multiuser timesharing system with hundreds of utilities and is the basis for a highly productive software development environment and a general-purpose applications system.

The XENIX operating environment combines two key elements: the design of the widely acclaimed UNIX operating system and the inclusion of the major high-level languages that are standard within the 8-bit microcomputer world (see figure 1). Microsoft's transport of the XENIX system to major 16-bit microprocessors has made it the first hardware-independent operating system.

The heart of the XENIX system is the UNIX operating system developed at Bell Laboratories and licensed by Western Electric. The UNIX system's elegant design combines power, flex-

ibility, and simplicity, and its vast array of software utilities greatly increases productivity. Thus, the UNIX system is an ideal candidate to serve as a solution to the software crisis.

Microsoft plans to make the XENIX operating system (which is an enhanced version of the UNIX system) into a commercial standard. And, in addition to supporting and enhancing the operating system

The XENIX system is one approach to solving the software crisis developing in the microcomputer world.

proper, Microsoft will adapt high-level languages, such as its BASIC interpreter and compiler, FORTRAN, Pascal, and COBOL, and other software tools, such as data-base management and communications software, to run under the XENIX operating system.

To understand the elegance of the basic UNIX design and the further enhancements in the XENIX system, we must take a closer look at the software. In this article, I will describe the main features in the UNIX operating system, discuss some of its strengths and weaknesses, and conclude with a discussion of the evolution of the XENIX operating environ-

ment from the UNIX operating system, and how it can help solve critical software issues. First, a historical overview.

Origins of the UNIX OS

The UNIX operating system was originally developed at Bell Laboratories by Ken Thompson, an employee engaged in various programming research projects. With access to an abandoned DEC PDP-7 computer that had no software, Thompson decided in 1969 to write a set of programs that would aid him in software research. Over a period of several years, and with the help of fellow researcher Dennis Ritchie, this set of programs evolved into a full operating system. By 1972, it was recoded for the DEC PDP-11 computer in a newly designed high-level language, called C. The system gained recognition within the Labs and their parent company, Western Electric.

Word of the quality of Thompson and Ritchie's UNIX operating system spread rapidly. Universities, in particular, expressed interest in obtaining UNIX, and in 1973, Western Electric agreed to distribute the system to nonprofit organizations and promptly licensed several dozen educational institutions, including Columbia University, the University of Alberta (Canada), The Children's Museum (Boston), Princeton University, and Harvard University. By 1975, UNIX had become sufficiently popular in the academic world to justify the

DOES YOUR PRINTER HAVE A ONE TRACK MIND?

ANNOUNCING:

The Paper Tractor.

The Paper Tractor turns your tractor feed printer into a friction feed printing system. Inexpensively.

With The Paper Tractor you can abandon dull continuous form stock and move into new realms of high quality personalized writing paper. Without costly hardware modifications.

This revolutionary product acts as a carrier, protecting and guiding any standard letter or legal size paper through the printing area. Any paper. Bond, parchment, onionskin, vellum, NCR. Even your company or personal letterhead.

The Paper Tractor is a unique solution to the restrictive nature of the tractor feed printer.

- › Fits 9½" or 14½" print frame.
- › Compatible with Matrix, Impact, Daisywheel and Ink Ejection printheads.
- › Fits front, back and dual tractor paper feeds.
- › Designed with self-aligning feed system.
- › Positions letter or legal size paper automatically with an edge-protecting guide.

- › Proven with all major manufacturer printers, including Epson, Tiger, TI, GP-80M, and more.
- › Designed for use with forward/reverse plotting printers.
- › Inexpensive!

one for	\$19.50
two for	\$18.00 each
three or more for	\$16.50 each

Leave the boredom of continuous form behind. Display your work in style. Be dynamic with The Paper Tractor.

XENIX OPERATING ENVIRONMENT

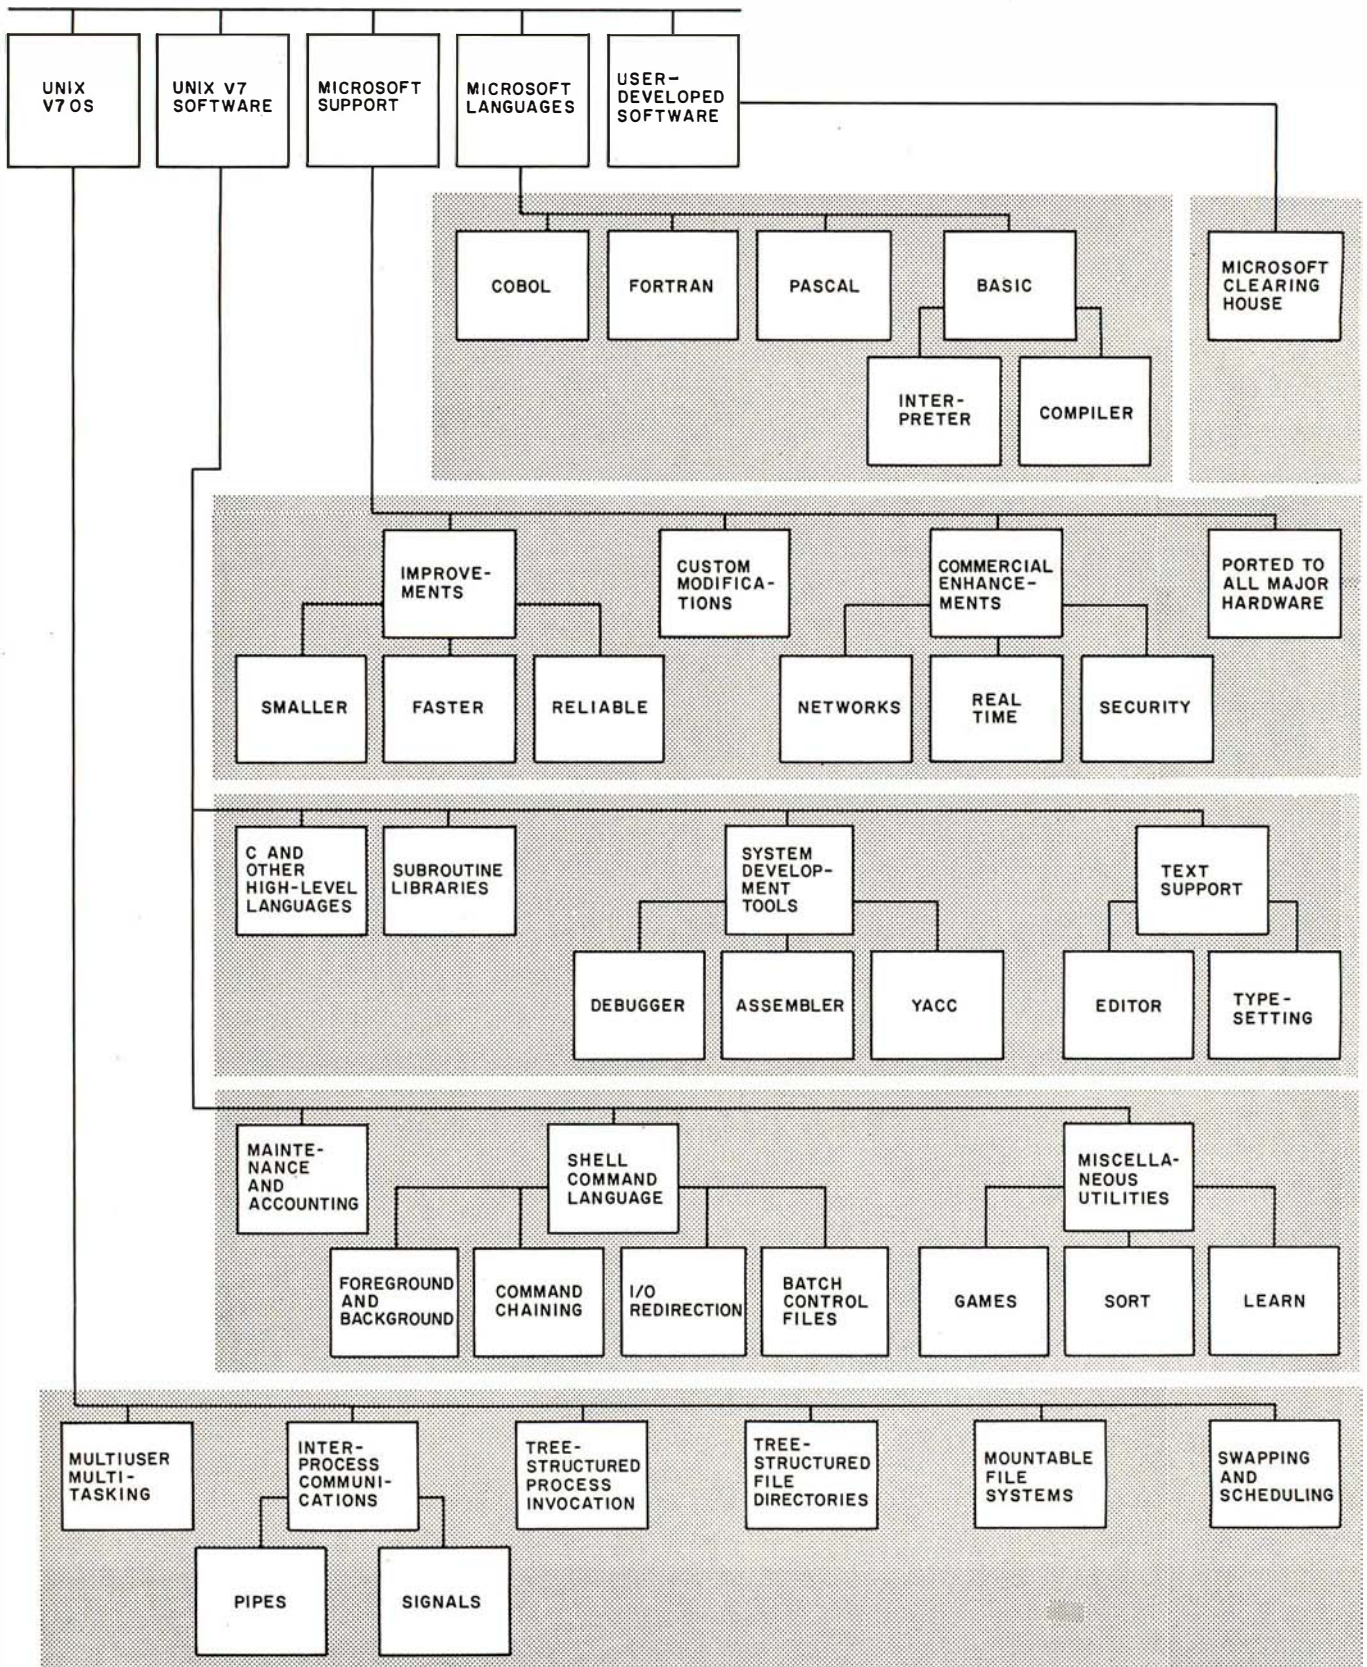

Figure 1: Microsoft's XENIX operating system. The five "layers" of the XENIX software structure are shown. XENIX, a superset of Bell Laboratories' UNIX operating system developed in the early 1970s, has a hierarchical structure. Each of the five layers depends on the layers beneath it for its operation. The bottom two layers represent the latest version of UNIX (version 7). The remaining three layers are the refinements that combine to make the XENIX system.

in 1981's
Golden Opportunity

The schedule of shows will be

1981

- 1 Cleveland, Ohio — August 14-16
- 2 Milwaukee, Wisconsin — August 20-23
- 3 St. Paul, Minnesota — September 9-11
- 4 Detroit, Michigan — September 24-26
- 5 Pittsburgh, Pennsylvania — October 1-3
- 6 St. Louis, Missouri — October 15-17
- 7 Dallas, Texas — October 22-24
- 8 Los Angeles, California — November 8-10
- 9 San Francisco, California — November 19-21
- 10 Denver, Colorado — December 3-5

Comp-U-Con Company presents — 10 Home and Business Computer Festivals — From Coast to Coast.

These shows will be directed toward the home user/hobbyist and small businessman and will be promoted by a full scale publicly appealing package of inducements — such as speakers on subjects of particular interest to the targeted groups and a drawing for a \$3000.00 computer system.

If your company has an interest in greatly increasing its sales this fall and does business within a 300 mile radius of any or all of the targeted cities. These shows are exactly what your looking for.

You may participate on two levels. You may either purchase Booth space, in which you can present and demonstrate your goods directly to the public, or you can purchase advertising space in each shows handout brochure that will be given to all that attend.

The average attendance is expected to range from 20,000 up to 35,000 people with additional information going out by mail to those who can't attend.

Please Call or Write today for complete details and costs. Write to — The Weston Research Institute, P.O. Box 175, Waverly, IA 50677 or **Call Jeff Weston, Collect at (319) 268-1953.**

Note - Because of limited space availability, an early reservation is recommended to assure you of space.

creation of a UNIX users' organization, later called USENIX.

The first public release of the UNIX operating system, labeled version 5, was an unpolished snapshot of a research project that was still evolving. It was replaced in 1975 with version 6, a system that is still operating today at many sites. UNIX continued to evolve, benefitting from the feedback it received from scores of internal and external test sites.

In January 1979, Western Electric released version 7. By this time, hundreds of man-years' effort has been expended on UNIX's design and software utilities, with most of the system coded in C. Research had proven that UNIX was compatible with the concepts of memory-limited computers, machine transportability, networks, and multiple-processor designs.

Unfortunately, there was no single standard design for UNIX. Because the operating system was simple and easy to change, almost every site altered it to meet their specific needs. Harvard, the University of California at Berkeley, and the RAND Corporation each offered a set of modifications. A number of incompatible versions of UNIX existed within Western Electric.

In addition, there has been a legal impediment to the UNIX system's distribution. The system is available essentially free-of-charge for educational institutions. Legally, however, Western Electric cannot be in the software business, so the commercial world is offered the operating system under noncompetitive terms: source code as is and no warranty, support, or maintenance—a steep fee for software that was never intended to serve commercial applications outside of Western Electric.

It had become clear that the support of a commercial software company was essential if UNIX was to become a software standard. In August of 1980, Microsoft announced that it would offer and support XENIX, a commercial version of the operating system, on 16-bit microprocessors. Working closely with Western Electric and a newly formed commercial users' organization, Microsoft intends to establish a stan-

dard industry version of UNIX that can provide a highly productive environment worthy of meeting the challenges of software development in the 1980s.

UNIX Design Goals

Two aspects of UNIX's origin have contributed to its design: (1) it was created in a few man-years by two people, and (2) the implementers were also major users of the system. The result is a polished, consistent, coherent design. UNIX achieves great power and flexibility, including compatible interfacing between all its features, without resorting to a large, complex program. An experienced system programmer can understand the entire operating system in weeks, rather than months.

The UNIX system's design goals unite various features supported by the UNIX system into a consistent and simple whole. The first design goal is to support a very basic level of functionality within the operating system itself, relying on normal user programs to provide sophistication. Such features as line printer queuing, login/logout, monitor commands, and file access methods are implemented as normal user programs instead of operating-system functions. This approach, which reduces the overall complexity of the system, has several advantages. Functions are more modular, and therefore easier to debug, features can be altered and upgraded without stopping the operating system, and alterations made to one feature are less likely to affect the rest of the system. Finally, individual users may create personal versions of certain features.

The second design goal is generality—that is, having a single method serve a variety of related purposes. For example, the same system calls are used to read and write disk files, devices, and interprocess message buffers. Likewise, the same naming, aliasing, and access protection mechanisms apply to data files, directories, and devices. As a final example, the same mechanism is used to trap software interrupts, user abort requests, and processor traps. The benefits of generality extend well

A definite breakthrough in Hard Disk Controllers: The HOP™ from ACT.

How we HOP™ up 5¼" Hard Disks.

Take a close look at the industry and you'll find lots of folks clamoring for the chance to utilize the new 5¼" Winchester-type Hard Disk microcomputer systems. The reason for this is obvious: the 5¼" Hard Disk packs millions of bytes of on-line data storage in the same space as a 5¼" standard floppy. Hard Disks also offer a degree of high reliability and high access mass storage that instantly obsoletes the floppies.

The problem most people had was finding a 5¼" Winchester-type Hard Disk with a decent controller package. For a while it seemed like an industry-wide problem. Until now. A company named ACT is announcing the HOP™! It's a whole new approach to affordable Hard Disk Controllers. And it works great!

Our Digital Data Separator means faster, more reliable throughput than Analog Separators.

The secret to our success lies in a new approach to Data/Clock separation. While others struggle to manhandle an Analog Data Separator into their controller cards, we at ACT took a completely different approach—a digital one.

What we came up with is the HOP™. It is a Digital Data Separator that fits the 5¼" Winchester-types like hand-in-glove.

We created a package that'll beat the pants off any other 5¼" Hard Disk or floppy it comes up against—all at a price you can't ignore.

Finally, a 5¼" Hard Disk micro-sequencing controller package with an efficient, floppy-like interface. We're talking about megabytes of formatted data storage to match the demands of today's (and tomorrow's) sophisticated programming. Your multi-terminal and real-time transaction oriented systems never had it so good. Or, so affordable.

What OEM buyers should know about the ACT HOP™ package.

OEM buyers should know that ACT offers a complete 5¼" micro-sequencing Hard Disk Controller together with the remarkable HOP™ Data Separator package. Offered separately are the HOP™ Digital Separator cards—all with OEM quantity discount rates which are positively attractive.

If all this sounds good on paper, just wait until you see the HOP™ in action! Your horizons will dramatically shift—upwards.

Clip and mail the coupon for quick response to your questions. Or better yet, give us a call at (703) 471-9750, TELEX: 440-388 ACTSYS, for some no-nonsense reasons to get off the stick... and on the HOP™!

A HOP™ above the Rest.

The new, high performance 5¼" Hard Disk Controller Package
that's taking the industry by storm.

beyond the simplicity of design; UNIX programming style is notably flexible, extensible, easily learned, and easily debugged.

The third goal is to accomplish large tasks by combining several small tasks whenever possible. UNIX's filters are an excellent example. A filter is a program that processes a single stream of input to generate one output stream. The UNIX system has a large variety of filters, including those that perform multicolumn formatting, string replacement, text processing, character translation, sorting, and graphics interfacing. Programs that generate output, such as the assembler, do not include facilities for listings; this task is accomplished by feeding programs directly to the various filters. This keeps the large programs simple to use, lets a user learn about each filter separately, and allows for special combinations of formatting without multiplying the options that each program would then have to support. It also leads to a uniform appearance of formatted

output and the commands needed to produce it, and yields all the benefits of modular solutions to complex problems.

The vast number of utilities provided with the system and the ease of linking them together via pipes provide a surprising amount of functionality. For example, to find out how many people are currently using the system, you need only feed the output of the system "who" command to the utility that prints the number of lines in its input. Thus, the command line:

```
who | wc -l
```

causes the output of the who command, which might look like:

arw	console	Jan 30 14:20
bobg	tty00	Jan 30 01:00
henry	tty01	Jan 30 12:50
gordon	tty03	Jan 29 10:08

to be fed to the program "wc," for "word count." The -l option tells wc, which normally prints the

number of characters, words, and lines in a file, that we only want to see the number of lines. Thus, this composite command prints a number which is the number of users on the system:

```
> who | wc -l
4
>
```

As a final step, we can create a file called "users," which contains the line:

```
who | wc -l
```

Typing "users" causes the command interpreter (or shell) to execute that line, and type the number of current users. We have now created a new system command.

A more dramatic example is shown in the following sequence: take a program that puts each text word in a file (or files) onto a separate line. Connect the output to a program that sorts lines into alphabetical order.

**High-Quotient of performance to cost.*

The output is a sorted list of all words in the text file(s). This list is fed to the program "uniq", which removes adjacent duplicate lines. The result is a data stream that contains one line for each different word in the original file(s). This stream is in turn connected to a program that reports differences between two files (one file

being a list of 30,000 words from the dictionary). Thus, typing the line:

```
prep file | sort | uniq | comm wdlst
```

will result in a list of words present in "file" but not present in "wdlst". Without writing a line of code, you have created a simple spelling program! Now, by creating a file called

"spell", which contains the line:

```
prep $* | sort | uniq | comm  
/usr/dict/words
```

you have created the command "spell". Note that the "\$*" is replaced by the command line interpreter with the arguments typed to the spell command. The UNIX system's command

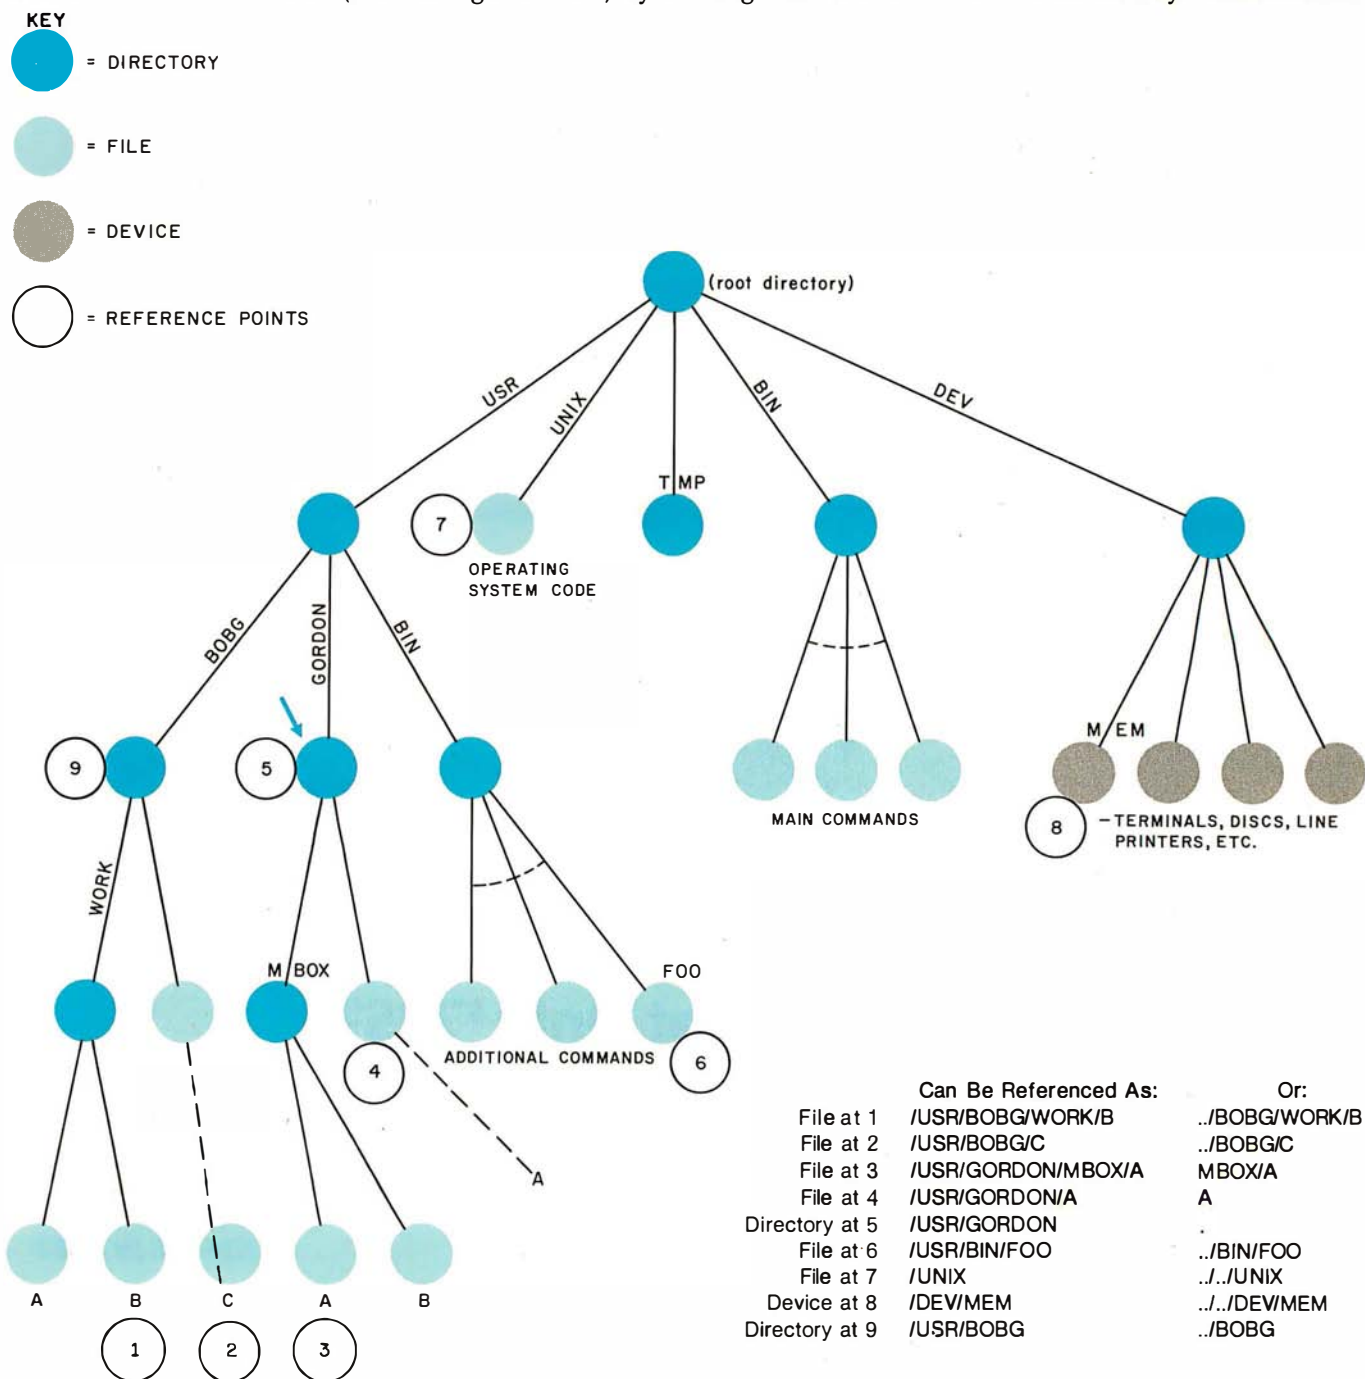

Figure 2: Hierarchical structure of the names and conventions for getting to any reference point in a typical XENIX file structure. In this example, it is assumed that the user is at reference point 5 (blue arrow). A list of instructions for getting to the various reference points appears beneath the diagram. (The file and directory labels shown here are actual labels used in the author's system.) To get to file 1, the user types "/USR/BOBG/WORK/B". XENIX then progresses down the tree from the root directory (at top) to the branches USR, BOBG, WORK, and B, arriving at point 1. Alternatively, the user can use the command "../BOBG/WORK/B", where "." refers to the parent node of the node currently in use. In XENIX, "." refers to the node itself.

Pan Am puts the middle seat out of business.

The loss, however, is your gain.

For when you fly in our new business section,* you'll never get stuck in the middle. Or by an elbow.

Because in Pan Am's Clipper® Class, we've eliminated the bane of business travelers. The middle seat.

But we didn't stop with merely removing the seat in the center. We replaced every one of them. With seats that are totally new.

(They're the same seats selected for First Class on the next generation of jets. The ones due for delivery around 1985.)

Our new seats are wider and larger than the ones you're probably used to. Which means they're much more comfortable than seats in your business-as-usual section.

And since there are fewer of them, you get an additional dividend. Room.

What's behind our move to remove the middle seat? Same motivation that's made Pan Am the innovator in air travel: concern

for your comfort and convenience.

That's why Clipper Class is now a distinctly separate part of the plane. Especially for people who travel on business.

And the reason we offer amenities not normally found this side of First Class. Everything from special check-in facilities to gourmet food served on fine china.

The bottom line? Simply that, from nine U.S. cities to 32 destinations all over the world, no other airline offers a better business section.*

So tell your Travel Agent or Corporate Travel Department you want Clipper Class.

On the airline that believes putting the middle seat out of business is putting the business traveler first.

*New Clipper Class is currently available to selected destinations. New destinations are being added each week. And by mid-year, our new Clipper Class will be offered on our entire 747 fleet—and on certain L1011s—worldwide.

PAN AM

Say hello to Pan Am.

interpreter, the shell, is a fully interactive language in its own right.

UNIX Operating System Design

The UNIX design introduces few new concepts because it borrows heavily from the better aspects of previously existing systems. UNIX contains numerous features found in the MULTICS and AOS operating systems, and the language C is modeled after BCPL. However, the coherence and simplicity with which the chosen features interact result in an unusually elegant design that has great merit of its own.

The UNIX operating system supports a multiuser, multitasking environment. Each user has full access to the resources of the computer on a timesharing basis. UNIX implements scheduling and swapping algorithms that allow the processor and memory to service more tasks, seemingly simultaneously, than would otherwise be possible. UNIX also includes various protection schemes that protect each user from the others. This functionality contrasts markedly with the current microcomputer systems that simplify hardware operation by providing device drivers but make little attempt to extend the computer's utility.

The UNIX file system is a recursive structure originating from a *root directory*. The root directory contains the names of files and subdirectories; the subdirectories contain names of other files and additional subdirectories, etc. When a user logs into the system, he is assigned a specific subdirectory as his current working directory. Full path names for files consist of a possibly null sequence of subdirectories separated by a slash, beginning with either the root or the current working directory, and followed by the file name. By convention, the file in each subdirectory called "." refers to the parent directory (see figure 2). Thus the user has a concept of local and global files neatly organized into directory groupings.

File names refer to data files, the directories themselves, character devices such as user terminals, block devices such as magnetic tape, file

systems mounted onto other disk devices, and interprocess communications devices known as *multiplexed pipes*. Multiple names (called aliases) can be assigned to any of these objects. A set of information, including owner and access permissions, is stored with each object; the directory entries only specify names for the objects.

Programs communicate with their environment with read and write calls directed to a set of open files. Each program starts with three open files: *standard input*, *standard output*, and *error output*. Normally, these files are connected to the user's terminal, but a powerful command-language program, the shell, allows easy and invisible reassignment of these channels. A program can also open any other object (file, device, etc) named in the file system to which it has appropriate access permission. Using a special call, a program can create

pipes, data channels that allow for communication between the program and any other programs connected to an end of the pipe.

All I/O (input/output) operations are performed as byte streams, with all channels appearing to contain a sequence of bytes until a globally defined end-of-file condition is indicated. Random access is also supported, using a call to reposition within the stream. Neither record sizes nor file types are imposed by the operating system. The system handles all interrupts and buffering, and each I/O call is suspended until the requested I/O operation can be completed. All devices, files, and pipes are treated identically (with minor exceptions), which greatly simplifies I/O routines.

A program may initiate another program by issuing a system call to duplicate itself. The two programs then operate independently, with

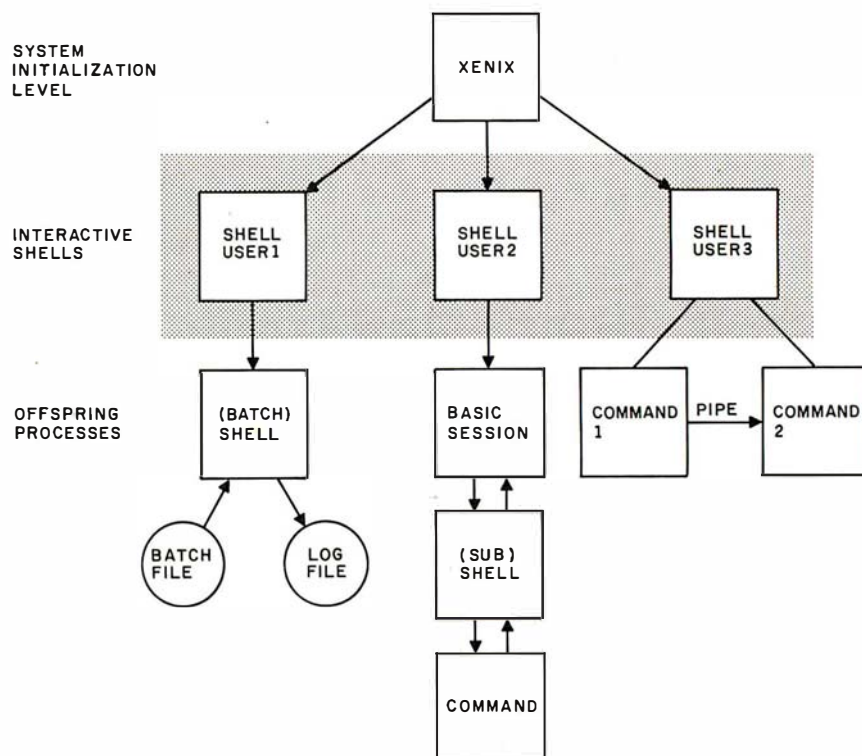

Figure 3: Tree-structured process hierarchies in the XENIX system. Three users are currently on line. The term "shell" refers to that portion of the XENIX operating system program that "surrounds" the operating system and allows it to communicate with the outside world. User 1 is running a batch shell that is executing commands from a file. User 2 has suspended a BASIC session and entered a subshell to issue a command at the system-monitor level, perhaps to send a message to another user. User 2 can then return to BASIC and resume the session. User 3 has executed a command whose output is piped through a second command.

Account on it.

With the Osborne programs as a base, we have developed a debugged, easily installed business package that compares favorably with systems costing much more.

General Ledger produces trial, monthly, and quarterly balance sheets and income statements. Journal entries can be entered manually, or automatically from the A/R and A/P systems.

Accounts Receivable is an open-item system that handles invoice, payment, credit memo, debit memo, and progress billing transactions. Customer statements are produced when desired.

Accounts Payable writes checks to specified vendors from invoice, credit memo, and debit memo transactions. You can distribute each transaction over a series of G/L accounts and job numbers.

Both the A/R and A/P systems produce aged invoice analysis listings based on user-specified time periods.

The **Payroll** system allows hourly, salaried, vacation, holiday, piecework, overtime and miscellaneous pay. Any number of deductions can be entered for each employee. 941-A and W-2 forms are produced when needed. A Job Cost subsystem keeps track of project dates and status, and records hours, cost and overhead information by employee for each job.

The checks and statements fit standard forms readily available from mail-order forms suppliers. You have your choice of a number of different formats.

We are committed to the support of our users. A tech support phone line gives you access to us if you need it. Full source code is included with every system. Our money-back guarantee speaks for itself.

Minimum requirements are 48K RAM, CP/M™ or CDOS, CBASIC2, a CRT, and a 132-column printer. We can provide standard 8", NorthStar 5" double-density, or Heath/Zenith 5" diskettes — call for availability of other formats. The price is \$295 per system, or \$995 for the complete set of four.

For more information, write VANDATA, Suite 205, 17544 Midvale Ave. N., Seattle, Wa. 98133, or call (206) 542-7611.

Vandata Business Software. *You can account on it.* Hundreds of other businesses already do.

CP/M is a registered trademark of Digital Research.

UNIX timesharing between them (see figure 3). Typically, the parent process waits for the completion of its child, and the child process executes another program in the file system by issuing a system call. However, both programs may continue execution in parallel. To synchronize their operation, they can communicate via the file system, pipes, or signals. Signals are software asynchronous interrupts that are issued by one program to another to cause the second program to interrupt its execution, process the signal, and then resume normal execution. Signals are also generated by user interrupt requests and software failures, such as divide-by-zero.

Thus, when a user compiles and links a program test.c by typing:

```
> cc test.c
```

the shell runs the C compiler (cc) as a child process. After it has spawned the child process, the shell puts itself to sleep. When the child process (the C compiler) finishes, the shell awakens and issues another prompt.

However, by simply adding an ampersand character to the command line:

```
> cc test.c &
```

you can instruct the shell not to sleep, but rather to return immediately for another command. You can then edit your documentation or some further program, while the first one is compiling. Note that typing:

```
> filename
```

causes the shell to run a copy of itself as a child. This child shell then executes, one by one, the commands in "filename." By simply adding the "&" character to the following line:

```
> filename &
```

you now have the capabilities of a full batch system, for free, as a result of the UNIX system's flexibility.

This section has presented a brief overview of the UNIX system features. A more complete descrip-

tion is available in documents from Microsoft, Western Electric, and a number of universities. I will conclude this section with a discussion of an excellent example of UNIX's multitasking abilities.

Multitasking

The multitasking and interprocess communication features of the UNIX system provide power that is unavailable in existing 8-bit computer systems. RITA, a large interpreter language for UNIX that I helped create for the RAND Corporation, provides an extensive example of the utility of these features. The RITA interpreter consists of over 100 K bytes of instructions and more than 64 K bytes of data—much larger than the current limit on UNIX program size. The solution was to split RITA into three separate programs that communicate through the use of five pipes, as illustrated in figure 4. Furthermore, separate programs are created by the interpreter to edit programs, read RITA news files, and perform UNIX commands, such as obtaining

access to networks. Several files are written for analysis by still other programs. All this multitasking takes place invisibly: the user still thinks he or she is running a single program.

A further benefit of multitasking and device-independent I/O is an unexpected feature of RITA's three-program arrangement. Normally, the first program, UFE (user front end) allows you to type and edit program statements, which are then converted to internal form by the second program, the parser, which in turn stores them in the third program, the monitor, for evaluation. The UFE also allows the statements to be

entered from a disk file; however, due to the complex parser program, loading a large file is too time consuming for many applications. A slight alteration to the UFE, the program which creates the other two programs and the five pipes, provides the solution. The new UFE (now called RC for RITA compiler), which requires no changes to the parser or monitor, funnels the output of the parser, normally fed to a pipe, into a disk file. Thus, RC produces "compiled" files whose contents can be fed directly into the monitor, bypassing the parser, when later loaded by RITA's UFE.

An Assessment of UNIX

UNIX offers unparalleled power for such a straightforward system. For the programmer, the system is easy to learn and offers immediate functionality, even for beginners. For more experienced users, the wealth of software tools leads to a more productive environment than less complete systems.

In addition, the UNIX operating system comes with hundreds of utilities and software tools that make it a complete software development environment. There is software for accounting, text editing, formatting and typesetting, high-level languages,

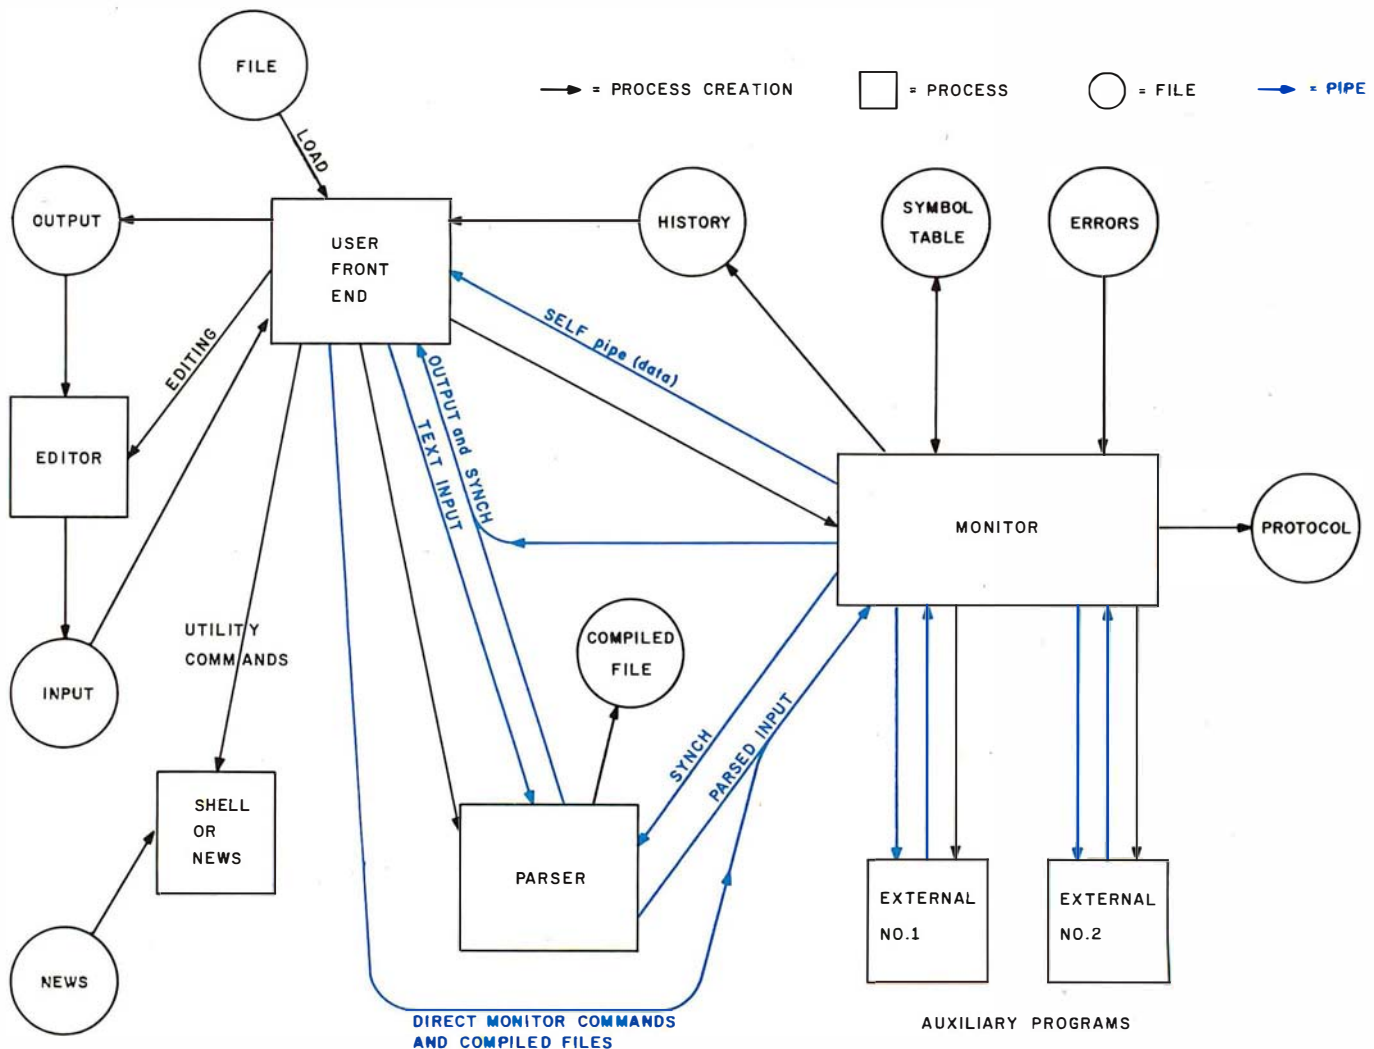

Figure 4: RITA, a program designed in part by the author to illustrate the multitasking and interprocess communication features of the UNIX system. The RITA interpreter consists of over 100 K bytes of instructions and more than 64 K bytes of data: much larger than the current limits on UNIX program size. The solution to the problem is to split RITA into three separate programs that communicate through the use of five "pipes." A different UFE (user front end) program, called the RITA compiler, can refunnel the output of the parser, normally fed to the monitor, into a disk file. Thus, the RITA compiler produces "compiled" files whose contents can be fed directly into the monitor, bypassing the parser, when later loaded by RITA's user front end. This approach allows the user to load large files that might otherwise require too much time.

Percom's DOUBLER II* tolerates wide variations in media, drives

GARLAND, TEXAS — May 22, 1981 — Harold Mauch, president of Percom Data Company, announced here today that an improved version of the Company's innovative DOUBLER* adapter, a double-density plug-in module for TRS-80* Model I computers, is now available.

Reflecting design refinements based on both theoretical analyses and field testing, the DOUBLER II*, so named, permits even greater tolerance in variations among media and drives than the previous design.

Like the original DOUBLER, the DOUBLER II plugs into the drive controller IC socket of a TRS-80 Model I Expansion Interface and permits a user to run either single- or double-density diskettes on a Model I.

With a DOUBLER II installed, over four times more formatted data — as much as 364 Kbytes — can be stored on one side of a five-inch diskette than can be stored using a standard Tandy Model I drive system.

Moreover, a DOUBLER II equips a Model I with the hardware required to run Model III diskettes.

(Ed. Note: See "OS-80*: Bridging the TRS-80* software compatibility gap" elsewhere on this page.)

The critical clock-data separation circuitry of the DOUBLER II is a proprietary design called a ROM-programmed digital phase-lock loop data separator.

According to Mauch, this design is more tolerant of differences from diskette to diskette and drive to drive, and also provides immunity to performance degradation caused by circuit component aging.

Percom DOUBLER II*

Mauch said "A DOUBLER II will operate just as reliably two years after it is installed as it will two days after installation."

The digital phase-lock loop also eliminates the need for trimmer adjustments typical of analog phase-lock loop circuits.

"You plug in a Percom DOUBLER II and then forget it," he said.

The DOUBLER II also features a refined Write Precompensation circuit that more effectively minimizes the phenomena of bit- and peak-shifting, a reliability-impairing characteristic of magnetic data recording.

The DOUBLER II, which is fully software compatible with the previous DOUBLER, is supplied with DBLDOS*, a TRSDOS*-compatible disk operating system.

The DOUBLER II sells for \$219.95, including the DBLDOS diskette.

Owners of original DOUBLERs may purchase a DOUBLER II upgrade kit, without the disk controller IC, for \$30.00. Proof of purchase of an original DOUBLER is required, and each DOUBLER owner may purchase only one DOUBLER II at the \$30.00 price.

The Percom DOUBLER II is available from authorized Percom retailers, or may be ordered direct from the factory. The factory toll-free order number is 1-800-527-1592.

Ed. note: Opening the TRS-80 Expansion Interface may void the Tandy limited 90-day warranty. Circle 288 on inquiry card.

All that glitters is not gold OS-80*: Bridging the TRS-80* software compatibility gap

Compatibility between TRS-80* Model I diskettes and the new Model III is about as genuine as a gold-plated lead Krugerrand.

True, Model I TRSDOS* diskettes can be read on a Model III. But first they must be converted and re-recorded for Model III operation.

And you cannot write to a Model I TRSDOS* diskette. Not with a Model III. You cannot add a file. Delete a file. Or in any way modify a Model I TRSDOS diskette with a Model III computer.

Furthermore, your converted TRSDOS diskettes cannot be converted back for Model I operation.

TRSDOS is a one-way street. And there's no retreating. A point to consider before switching the company's payroll to your new Model III.

Real software compatibility should allow the direct, immediate interchangeability of Model I and Model III diskettes. No read-only limitations, no conversion/re-recording steps and no chance to be left high and dry with Model III diskettes that can't be run on a Model I.

What's the answer? The answer is Percom's OS-80* family of TRS-80 disk operating systems.

OS-80 programs allow direct, immediate interchangeability of Model I and Model III diskettes.

You can run Model I single-density diskettes on a Model III; install Percom's plug-in DOUBLER* adapter in your Model I, and you can run double-density Model III diskettes on a Model I.

There's no conversion, no re-recording. Slip an OS-80 diskette out of your Model I and insert it directly in a Model III.

And vice-versa. Just have the correct OS-80 disk operating system — OS-80, OS-80D or OS-80/III — in each computer.

Moreover, with OS-80 systems, you can add, delete, and update files. You can read and write diskettes regardless of the system of origin.

OS-80 is the original Percom TRS-80 DOS for BASIC programmers.

Even OS-80 utilities are written in BASIC. OS-80 is the Percom system about which a user wrote, in Creative Computing magazine, "... the best \$30.00 you will ever spend."

Requiring only seven Kbytes of memory, OS-80 disk operating systems reside completely in RAM. There's no need to dedicate a drive exclusively for a system diskette.

And, unlike TRSDOS, you can work at the track sector level, defining and controlling data formats — in BASIC — to create simple or complex data structures that execute more quickly than TRSDOS files.

The Percom OS-80 DOS supports single-density operation of the Model I computer — price is \$29.95; the OS-80D supports double-density operation of Model I computers equipped with a DOUBLER or DOUBLER II; and, OS-80/III — for the Model III of course — supports both single- and double-density operation. OS-80D and OS-80/III each sell for \$49.95.

Circuit misapplication causes diskette read, format problems. High resolution key to reliable data separation

GARLAND, TEXAS — The Percom SEPARATOR* does very well for the Radio Shack TRS-80* Model I computer what the Tandy disk controller does poorly at best: reliably separates clock and data signals during disk-read operations.

Unreliable data-clock separation causes format verification failures and repeated read retries.

CRCERROR-TRACK LOCKED OUT

The problem is most severe on high-number (high-density) inner file tracks.

As reported earlier, the clock-data separation problem was traced by Percom to misapplication of the internal separator of the 1771 drive controller IC used in the Model I.

The Percom Separator substitutes a high-resolution digital data separator circuit, one which operates at 16 megahertz, for the low-resolution one-megahertz circuit of the Tandy design.

Separator circuits that operate at lower frequencies — for example, two- or four-

megahertz — were found by Percom to provide only marginally improved performance over the original Tandy circuit.

The Percom solution is a simple adapter that plugs into the drive controller of the Expansion Interface (EI).

Not a kit — some vendors supply an untested separator kit of resistors, ICs and other paraphernalia that may be installed by modifying the computer — the Percom SEPARATOR is a fully assembled, fully tested plug-in module.

Installation involves merely plugging the SEPARATOR into the Model I EI disk controller chip socket, and plugging the controller chip into a socket on the SEPARATOR.

The SEPARATOR, which sells for only \$29.95, may be purchased from authorized Percom retailers or ordered directly from the factory. The factory toll-free order number is 1-800-527-1592.

Ed. note: Opening the TRS-80 Expansion Interface may void the Tandy limited 90-day warranty. Circle 395 on inquiry card.

assembly support utilities, sorters and index generators, communication facilities, tools that create parsers and lexical analyzers, graphics, games, mathematical function libraries, maintenance and performance utilities, and a host of file manipulators. Few needs cannot be met through a combination of these existing utilities.

The flexibility of UNIX allows easy alteration of its user interface. Various installations have demonstrated how easy it is to completely alter the appearance of UNIX in order to serve a different class of users. That UNIX cannot be everything to everyone is overshadowed by the fact that, as it is truly general-purpose, it can perform in almost any environment.

UNIX, as supplied by Western Electric, is not without its weaknesses. The general-purpose timesharing design limits UNIX's efficiency in real-time applications, such as process control. Its standard interface is highly terse, and though this is often considered desirable by programmers, the untamed UNIX will frighten almost everyone else. The origins of many of the command names are obscure; examples include a tape command "r" to write to a tape, command "cat" which types files, and "awk", a program for finding patterns in files. However, command names can be easily changed by the user.

UNIX has not been adapted for commercial use, where the issues of reliability, stability during hardware errors, full per-user accounting, reconfigurability for a large variety of environments, and security take on special importance. For example, less expensive disk packs for larger disk drives usually contain bad spots, and UNIX does not automatically adjust for them. In the environment for which the UNIX system was developed, it was cheaper to buy perfect packs than to write a "bad spot avoidance" routine. These issues must be addressed before UNIX can be considered a sturdy, robust, and commercial piece of software.

A crucial problem, and one not restricted to UNIX, is the lack of true

applications software. Currently, there are few good accounts payable, invoicing, mailing list, income tax, or data-base management packages. UNIX provides an excellent software production environment because of its wealth of software tools utilities, but the system does not contain a similar variety of application-oriented software.

The XENIX System

Microsoft's XENIX operating system represents an attempt to preserve the strengths of the UNIX design and also meet the needs of the commercial microprocessor industry. To achieve this goal, Microsoft used the system as it was distributed by Western Electric and then added modifications, customizations, improvements, enhancements, support, and additional software.

Modifications included those necessary to transport the UNIX system from the larger PDP-11 mini-computer to the 16-bit microprocessors. Currently scheduled machines include the DEC LSI-11/23, Zilog's Z8001 and Z8002, Intel's 8086 and 286, and Motorola's MC68000. Numerous other processors are also being considered, and Microsoft will then customize the XENIX systems to the specific hardware environments of the various computer systems built around these processors. The company is also working closely with a number of hardware manufacturers to design products that will be capable of efficiently executing the XENIX software.

Improvements will include elimination of known bugs and recoding of certain routines to produce a smaller and faster operating system. XENIX will also incorporate hardware error recovery strategies, automatic file repair after crashes, power-fail and parity-error detection, and similar features, depending on the particular hardware requirements of each XENIX system.

The planned enhancements will add a number of new features to XENIX. These features include record locking, shared data segments, synchronous writing, and improved interprocess communication—all of

which are designed to make XENIX commercially viable and more compatible with the newer hardware technologies that involve distributed data processing, networking, and multiple-CPU approaches.

XENIX is a dynamic, evolving system. In its first release, its code was very close to the original UNIX version 7 source. The improvements and enhancements that I have mentioned are part of an evolving process, and the exact selection and specification of features will be developed throughout the course of 1981. Updates to XENIX will result in systems upwardly compatible from its first release.

The adaptation of Microsoft's full line of system software products to XENIX will further strengthen XENIX's role as a software standard. These products, including the BASIC interpreter and compiler, COBOL, FORTRAN, and Pascal, have already established themselves as standards within the 8-bit market; they are also compatible with corresponding ANSI (American National Standards Institute) standards. Standard high-level languages will allow the rapid introduction of existing application software into the XENIX environment.

The XENIX system will offer an ever-expanding variety of software, including data-base management, financial planning, communication, and networking packages. Microsoft is establishing a clearinghouse, wherein quality software running under XENIX may receive widespread distribution, thereby reducing duplication of effort. The combination of the UNIX operating system's strengths and Microsoft's awareness of the needs of the commercial marketplace promises to make XENIX a very powerful defense against the looming software crisis. By establishing a universal operating environment, complete with software tools to increase productivity, flexible design to widen applicability, and multiple microprocessor support to improve availability, Microsoft hopes that XENIX will become the preferred choice for software production and exchange. ■

MAIN FRAME POWER— MICRO PRICE

OSM's ZEUS multiprocessor computer system delivers main frame performance for one to 64 users—**performance impossible in a single processor micro!** We start with the S100 bus and mount a Z80A as master processor to control the shared resources of disk and printer. Then we add a separate single board Z80A processor for each user (no bank switching!) so ZEUS can **grow any time from a single user to many** with no changes in programs or files. And each user is independent of reset or program crash in other users.

OSM's MUSE operating system—the Multi User System Executive—is **many times faster than other leading operating systems.** Each user owns a resident copy of MUSE so you don't wait for the bus or interrupt the master processor to do console I/O and applications code. MUSE finds files fast with a random directory access similar to random file access. And MUSE protects shared files from simultaneous update to the same record by different users. We designed MUSE from the start for multi-user data base environments—yet MUSE is **CP/M* compatible!**

Check the other multi-processors!

Check the hardware!

- S100 compatible master processor (4MHz Z80A, 32K dynamic RAM) for disk and shared printer control
- single board processor (4MHz Z80A, 64K dynamic RAM), with I/O on board, for each user
- serial and parallel ports on each user board support optional slave printer or other user devices
- rack mountable enclosure built to highest industrial standards for reliable continuous operation
- readily field expandable to any configuration from 1 user, 64K RAM, to 64 users, 4 Megabyte RAM
- 2.4 Megabyte double sided dual density 8" floppy disk
- 26 to 96 Megabyte hard disk option
- independent user processor reset directly from each keyboard

Check the operating system!

- all MUSE code written in Z80 native code (not 8080 code) for fast response
- MUSE user operating system in 7K RAM on board each user processor reduces calls to the master processor
- transfer of data between master and users via single Z80 block move command for highest speed
- random directory search provides immediate file access
- common file area for shared programs and files eliminates redundant files while individual user file areas protect each user's private files
- shared file update with record level lockout
- spool file can be displayed, updated, reprinted
- password security protects multiple user data bases
- MUSE supports standard CP/M* word processors, utilities, and languages: MBASIC, CBASIC, PASCAL, FORTRAN, COBOL, FORTH, C, PL/I, etc.

Check the price!

- Single user mainframe with dual 8" floppy drives expandable to 12 users. Begins at \$5715.00.

All the excitement of "hands-on" experience
with the newest small computers
returns to New York City in August.

New York Compu ter Expo

Albert Hall Sheraton Centre,
52nd St. & 7th Ave., New York, NY
Aug. 12-15, 1981

Minis / Micros / Software / Peripherals
Services / Free Lectures

Once again, the fascinating world of computers is presented in the heart of New York City for business, science, education, professionals and personal users.

It's the greatest opportunity on the east coast to get an up-date education on what's new by visiting 15,000 square feet of exhibits and attending lectures given by expert computer scientists and educators.

SPECIAL "BUSY EXECUTIVE" SESSION

New York Computer Expo presents an ancillary opportunity for the busy executive who feels it's time to become familiar with computers and the world of data processing, quickly, efficiently and at a low cost.

The aim of this special session is to show the busy executive how to approach data processing technology, how to cope with it on an administrative basis, how to keep ahead of it, and how to put this knowledge to immediate use.

The tutorial covers about five hours, and will be given once each day, Aug. 11 through Aug. 15. Each tutorial has limited registration. Hours are 9 a.m. to about 3 p.m., with time for lunch and a coffee break.

Each registrant will receive an original workbook and computer language dictionary. Four-day registration for the New York Computer Expo also is included. Total fee for the session is \$200.

EXECUTIVE TUTORIAL OUTLINE

SECTION 1. COMPUTER FUNDAMENTALS

In this section of the course you'll learn what a computer is, how it's put together and how you make it do the things you want it to do.

- A. ABC's of Computers
 - What a computer actually is and what it's not.
 - How a computer works. The in's and out's of number systems.
- B. Computer Hardware
 - The basic parts of a computer.
 - CPUs--An introduction to the different types.
 - Memory--RAM, ROM, EPROM, ETC.
 - Peripherals.
- C. Computer Software
 - The anatomy of a simple computer language--BASIC.
 - Software buzzwords.
- An overview of the major computer languages--Assembler, FORTRAN, COBOL, PASCAL PL/1, APL, ADA, C, FORTH, LISP and more.
- Packaged software--why you may need it.
- Specialized software--Data base/data management systems, etc.
- D. Computer Configurations
 - Putting computers, terminals, etc., together in more complicated ways to improve efficiency.
 - Time sharing
 - Data communications
 - Distributed processing.
- E. A look at the People Side of Data Processing
 - What are all those people *really* doing? Functions of various types of computer personnel: programmers, systems analyst, data entry personnel, operators, etc.
- F. An Overview of Computer Applications
 - An introduction to some of the things computers are being used for.

SECTION 2. HOW TO CHOOSE, INSTALL AND OPERATE A COMPUTER

- A. Defining Your Needs
 - The feasibility study. How to cost out the obvious computer applications.
 - Setting up a computerization timetable.
 - Long-range computer and office automation planning.
- B. Finding Out What's Available to Fit Your Needs
 - A comprehensive overview of the current state of the art in computers, peripherals and software. We'll even give you a peek into the future at what might be available in the years to come.
- C. How Much Work to Do in-House and How Much to Contract Out
 - An information-packed discussion of the available sources of outside help: computer stores, systems houses, contract programmers, service bureaus.
- D. How To Handle A Vendor
 - How to solicit bids and pick the best one.
 - Computer contracts--picking your way through the minefield.
- E. Conversion
 - How to get from your current systems to your new system.
- F. The Care And Feeding Of Computer People
 - How to find and keep the right personnel in a very tight market.

SECTION 3. WHERE TO GET MORE INFORMATION

- Introduction to computer organizations.
- Finding other companies and executives in similar circumstances.
- A complete, annotated bibliography of the best and *clearest* books in the field.

ABOUT THE INSTRUCTOR

The instructor for the course is Barbara Schwartz. The course lecture and workbook is all original material created by her. She is a consultant to major corporations and small businesses and is a writer on computer and data processing topics. She has taught courses for companies and schools in simple clear English.

FREE LECTURE SCHEDULE

	August
Introduction to Small Systems for Business	12 & 13
Introduction to Personal Computing	12 & 15
Selecting a Small Computer for Business for the First-Time user	12 & 14
Computer Performance in an Accounting Environment	12 & 14
Survey of Graphic Packages Available for Micros	12 & 13
All About Printers for Business	12
Understanding the Cost of Business Software	12 & 13
The Computer as a Scientific research Tool	12 & 14
CP/M Update	14
Interfacing to the Real World	13 & 15
The Multi-Lingual Microcomputer	13
Introduction to COBOL for Microcomputers	13 & 15
Using a Microcomputer for Technical Analysis of Stocks & Commodities	13 & 14
Survey of Computer-Assisted Instruction	13 & 15
All About Printers for Personal Use	13
The Next Five Years in Small Computers	14 & 15
Applying PASCAL	14
Microcomputers and Medicine	14
The Beauty of FORTRAN for Small Computers	14 & 15
The Future of the Home Terminal	15
Selecting a Small Computer for Personal Use	15
Uses of the Microcomputer in Education: New Directions	15

Subject to Change

Show Registration Fee: \$10 per day
Show Hours: 11 a.m. to 6 p.m. Daily

The Ins and Outs of CP/M

James Larson
3422 Union St
San Diego CA 92103

CP/M (Control Program for Microprocessors) is the most commonly used 8080/8085/Z80 operating system. CP/M is easy to use and the Digital Research documentation is reasonably thorough and clear, especially by microprocessor-software standards. However, the documentation is lacking in one area: the explanation of I/O (input/output) and disk interfacing. This article will clarify and expand upon the documentation. A summary of the I/O and disk-interface routines, calling sequences, use of return codes, and typical subroutines using these will be presented. The use of file-control blocks (FCBs) and I/O buffers will also be explained. Finally, some details of the CP/M I/O functions and their workings will be presented.

Calling CP/M Routines

The procedure for calling CP/M routines is straightforward. I/O procedures are defined as a series of functions. Each function is assigned a unique *function number*. The function number is placed in the microprocessor's C register; the data required (*entry parameter* in CP/M parlance) is placed in the E register if only 1 byte is to be sent, or in the DE register pair if a word (2 bytes) is required. Some functions have no entry

parameters. Results (called *returned values*) are either returned as a byte in the A register or as a filled buffer (whose address is usually sent as an entry parameter). Table 1 summarizes the basic I/O functions and calling sequences. Once the registers are properly loaded, a call to the CP/M entry point at hexadecimal memory location 0005 is made. It is important to know that CP/M does not preserve the contents of these registers, so any routine calling CP/M routines must protect any registers to be preserved. A typical subroutine to call a CP/M-utility routine is shown in listing 1. Refer to the examples for specific applications of this sequence. The function numbers and their purpose, entry parameters, and returned-value codes are summarized in table 1 and table 2.

I/O Routines

Listing 2 presents several useful subroutines that make calls to CP/M I/O routines. Calls to the punch device and reader device assume that these drivers exist in your version of CP/M, though they may or may not actually be driving a physical paper-tape reader/punch. As explained in the *CP/M Features and Facilities Guide*, logical devices may or may not correspond to actual physical

devices. Writing and installing these drivers for CP/M is beyond the scope of this article.

Listing 3 shows the use of buffers for CP/M I/O. The address of the buffer is placed in the DE register pair and the call to the CP/M entry point is made. The contents of the print buffer are printed on the console until a dollar sign is encountered. The print buffer is not destroyed in this process. A typical print buffer is configured as:

```
c1 c2 c3 c4 .... ck $
```

where *k* is the number of valid characters and \$ signifies the end of the buffer. The read buffer is configured as:

```
m k c1 c2 c3 c4 .... ck
```

where *m* is the maximum number of characters allowed in the buffer, and *k* is the number of characters actually in the buffer. CP/M places characters in the buffer until a carriage return is encountered or the maximum buffer length is reached. The maximum length, *m*, may be from 1 to 256, and is defined by the user program. The value of *k*, the number of valid characters, is initially set to 0. It is set by CP/M to reflect the number of

LEADER OF THE PACK

You'll see a lot of confusing claims for disk packs and storage modules, but here are a few tips that can help you make the right choice when you're specifying your next pack:

BASF products represent BASF technology and quality, because, unlike many suppliers, we make them ourselves.

We polish our uncoated metal disks to a mirror finish for optimum headflight characteristics and virtually no possibility of media-induced headcrash.

We coat, polish, and burnish each disk by our own process, assuring you of long-lasting, trouble-free operation.

We magnetically orient all oxide particles in the disk coating for greater packing density.

We drive-test each pack before it leaves the factory, for top performance with no surprises.

BASF has your configuration and format*... at a competitive price, ready for immediate delivery.

For the name of your nearest supplier, write BASF Systems Corporation, Crosby Drive, Bedford, MA 01730, or call 800-343-4600.

*For Burroughs: Front-load single disk cartridges, 80 MB Tridents.
 For CDC: 80 and 300 MB storage modules, Phoenix single disk cartridges.
 For Data General: 50, 100, 200, and 300 MB disk packs, top-load single disk cartridges.
 For DEC: 100 and 200 MB 12-high packs, front-load single disk cartridges, 80 and 300 MB storage modules.
 For Honeywell: Phoenix single disk cartridges, 80 and 300 MB storage modules, 100MB packs.
 For IBM: 100 and 200 MB 12-high packs, top and front-load single disk cartridges.
 For Wang: Phoenix single disk cartridges, 80 and 300 MB storage modules, top-load single disk cartridges.

BYTE-6

characters read into the buffer from the console. The CP/M line-editing features (control R, control C, etc) may be used with this routine. Other control characters will be echoed with a leading ^ (called a circumflex), and will be inserted into the buffer. Any parity bits will be stripped by CP/M (this also applies to the single-character read functions in listing 2).

The final aspect of CP/M I/O that

requires clarifying is the I/O status byte. This is a single byte at hexadecimal memory location 0003. It was apparently included in CP/M for compatibility with Intel software and must be specifically implemented by the user in BIOS (Basic I/O System). The I/O status byte, poorly described in the *Interface Guide*, is described much better in the *System Alteration Guide*, Section 6. By varying the

value of this location, the user may reassign logical I/O devices without rewriting the system software.

CP/M Disk-Interface Routines

The use of the disk-interface routines provided by CP/M is more involved. But it is not too difficult once the basic concepts are grasped.

Text continued on page 274

Function Number	Function Description	Entry Parameters (placed in DE)	Returned Value (Returned in A or AB (A = LSB))	Typical Call **
1	Read a character from the console.	None	ASCII character	MVI C,1 CALL NTRY ;READ FUNCTION ;CP/M ENTRY POINT
2	Write a character to the console.	ASCII character	None	MVI E,CHAR MVI C,WRITE CALL NTRY ;CHARACTER IN E ;WRITE FUNCTION = 2
3	Read a character from the reader device.	None	ASCII character	MVI C,RDR CALL NTRY ;READER FUNCTION = 3
4	Write a character to the punch device.	ASCII character	None	MVI E,CHAR MVI C,PNCH CALL NTRY ;CHARACTER IN E ;PUNCH FUNCTION = 4
5	Write a character to the list device (usually a printer).	ASCII character	None	MVI E,CHAR MVI C,PRNT CALL NTRY ;WRITE TO PRINTER = 5
7	Get I/O status.*	None	I/O status byte	
8	Set I/O status.*	I/O status byte	None	
9	Output print buffer to console.	Address of a print buffer	None	LXI D,PBUF MVI C,BUFO CALL NTRY ;ADDRESS OF BUFFER ;OUTPUT BUFFER = 9
10	Input a character string from the console.	Address of a read buffer	The read buffer is filled to its maximum length or until a <CR> is typed.	LXI D,RBUF MVI C,BUFI CALL NTRY ;ADDRESS OF BUFFER ;INPUT BUFFER = 10
11	Interrogate console for a character ready.	None	01 if a character is ready	MVI C,ASK CALL NTRY ;INTERROGATE = 11

*If implemented

**See listings 1, 2, and 3 for subroutines and program usage. NTRY is the CP/M entry point (0005).

Table 1: Summary of the basic I/O functions available on a standard CP/M system.

EXTENDED PROCESSING ANNOUNCES THE MODEL EPZ-A SINGLE BOARD COMPUTER APPLICATION ORIENTED DISTRIBUTED PROCESSING FOR THE S-100 BUS

Don't make one CPU run multiple programs. Make multiple CPU's run one or more programs. The EPZ is a complete Z80A computer designed to work in PARALLEL to your existing CPU. It is designed to do YOUR applications. Use it in applications where your present CPU isn't quite fast enough by itself or where intelligence is needed to control a peripheral and your present CPU doesn't have enough time.

If even more processing capability is needed then add a second EPZ. As many as 64 EPZ's could be added if you had enough slots in your system. Each one operating independently and not taking any RAM or ROM from your present system or from each other. This is your chance to add processing power and expandability to your system and still keep your present hardware and software intact.

Features include:

- 4MHz Z80A microprocessor.
- ROM operating system.
- 8K of fast static RAM for trouble free operation.
- 8 bit parallel I/O and 2 status ports to interface with the host CPU.
- 8 bit parallel I/O and status flags to interface to the users application.
- 2K EPROM (2716) expandable to 4K (2732).
- Software supplied to interface 8080/Z80 CPU to the EPZ.

- Expansion connector and I/O connector at the top of the board. Can be expanded to 64K of RAM. All Z80A signals are available and buffered for maximum flexibility.
- The EPZ features the latest in PC board design. Including 4 layer construction for the ultimate in noise suppression. Silk screen and solder mask are also used. All IC's are in sockets.
- Comes completely assembled, tested and ready to run without any hardware modifications to your system.
- Optional utility software to interface the host to the EPZ. Contact Microbyte for details.
- Introductory price of \$595.00.

AVAILABLE EXCLUSIVELY FROM
Microbyte Computer Systems
2626 Union Avenue, San Jose, CA 95124

TOMORROW'S answers for the H8® TODAY!

DG Electronic Developments provides the only enhancements to put the Heath® H8 ahead **TODAY** while maintaining its high standards, broad flexibility and high reliability.

DG-80 (Z80® Based CPU)

The DG-80 offers the **BEST** foundation for the H8 to build on for the future. Compare the DG-80 to your current Heath® 8080 CPU and see the advantages of the DG-80's superior speed and flexibility. The Z80 gives twice the processing speed coupled with twice the instruction set making your H8 a truly professional microsystem. The DG-80 aids in efficient writing of utility programs, user routines, sub-routines and use of assemblers.

DG-80 \$249 (Documentation only \$25.)

DG-FP8/ADP4 (DG80 Front Panel Monitor)

The DG-FP8/ADP4 firmware/hardware package brings the world of standardization to your H8. The FP8/ADP4 allows the full use of currently available "STANDARD" CPM software, with 4 MHz operation. You can still use your HDOS and all its related software, by simply putting a disk in your drive. The DG firmware package gives you use of the full 64K of RAM available on the 64D or 64D5. The FP8/ADP4 firmware also offers many extras including hexadecimal OR split octal display; simplification of register and memory contents display; and the full use of all Z80 registers. Supports 5¼ and 8" Heath disk drives.

DG-FP8 \$69.95. DG-ADP4 \$19.95. Purchased together \$79.95.
(Documentation only — source code not included \$15.)

DG-64D (64K RAM Memory Board)

The DG-64D is **THE BEST** memory board available for the H8! Along with the DG-80 CPU, the 64D gives a full 64K of addressable memory. Its built-in flexibility ensures future compatibility. Multi-user configurations can be achieved accessing up to eight 64D's on line with the hardware/software bank select features. Memory contents are maintained and protected during extended wait states by asynchronous refresh.

DG-64D priced from \$333 (ØK) to \$529 (64K). (Documentation only \$15.)

DG-64D5 (5-Volt Power Supply 64K RAM)

The DG-64D5 memory board offers the **ultimate** in low power consumption for the H8 computer! The 64D5 is primarily designed for use with the Heath Color Graphics board. In addition to offering **ALL** of the features of the standard 64D, the 64D5 utilizes reliable **single-supply** 5-volt-only dynamic RAMs.

Priced from \$333 (ØK) to \$799 (64K). (Documentation only \$15.)

CP/M (Standard V2.2 Disk Operating System)

The final component for the "STANDARD" H8 system is Digital Research's CP/M® V2.2. Our full line of H8 enhancements in combination with CP/M gives the user unparalleled flexibility and software availability.

CPM V2.2 \$130. (Documentation only \$25.)

All products supplied with complete documentation.

Please call or write for additional information.

DG ELECTRONIC DEVELOPMENTS CO.

Ordering Information: Products listed available from DG Electronic Developments Co., P.O. Box 1124, 1827 South Armstrong, Denison, Tx. 75020. Check, Money Order, VISA or MasterCard accepted. Phone orders (charge only) call (214) 465-7805. No COD's. Freight prepaid. Allow 3 weeks for personal checks to clear. Texas residents add 5%. Foreign orders add 30%. Prices subject to change without notice.

Function Number	Function Description	Entry Parameters and Comments (placed in DE)	Returned Value and Comments. (Returned in A or AB (A = LSB))	Typical Call*		
12	Lift head.	None	None—head is lifted from currently logged disk.	MVI CALL	C,12 NTRY	;LIFT FUNCTION
13	Initialize CP/M disk access.	None	None—disk drive A is "logged in" for access. The DMA address is set to 0080H.	MVI CALL	C,13 NTRY	;CP/M ENTRY POINT ;INITIALIZE
14	Select and log in disk.	Value corresponding to the desired disk: A = 0, B = 1, etc	None—specified disk is selected for subsequent file operations.	MVI CALL	E,DISKNO C,SELDSK NTRY	;DISK # IN E ;SELECT = 14
15	Open file.	Address of FCB for the file to be opened	Byte address of the FCB in the disk directory, or 255H if file is not found—the disk map (DM) bytes in the FCB are filled by CP/M.	LXI MVI CALL	D,FCB C,OPEN NTRY	;ADDRESS IN DE ;OPEN = 15
16	Close file.	Address of FCB for the file to be closed	Byte address of the FCB in the disk directory, or 255 if not found—the disk map of the FCB is written to the directory, replacing any existing data for that file.	LXI MVI CALL	D,FCB C,CLOSE NTRY	;CLOSE = 16
17	Search for file.	Address of FCB containing name and type of file to search for. "?" matches any character.	Byte address of first FCB in directory that matches the name and type in the input FCB. If no match, 255H is returned.	LXI MVI CALL	D,FCB C,SEARCH NTRY	;SEARCH = 17
18	Search for next occurrence.	Address of FCB as in 17, but called after 17 before any other disk access	Byte address of next match. 255H if no additional match.	LXI MVI CALL	D,FCB C,SEARN NTRY	;SEARN = 18
19	Delete file.	Address of FCB of file to be deleted	None—FCB in directory is marked as deleted. (E5H is placed in ET field.)	LXI MVI CALL	D,FCB C,DEL NTRY	;DEL = 19
20	Read record.	Address of FCB containing a disk map. Normally as a result of opening the file (15) and setting NR to the record to be read.	0 = successful read 1 = read past logical end of file (^Z) 2 = reading unwritten data Data read is placed in memory at the DMA address (function 26).	LXI MVI CALL JNZ	D,FCB C,READ NTRY ERROR	;READ = 20 ;HANDLE READ ERROR
21	Write record.	Same as read, but NR is set to the record to be written	0 = successful write 1 = error in extending file 2 = end of disk data 255H = no more directory space—Data written is taken from memory starting at the DMA address.	LXI MVI CALL JNZ	D,FCB C,WRITE NTRY ERROR	;WRITE = 21 ;HANDLE WRITE ERROR
22	Create file.	Address of FCB of new file, all data set to 0 except name and type	Byte address of directory entry of new file or 255H if directory is full.	LXI MVI CALL JM	D,FCB C,CREATE NTRY NOROOM	;CREATE = 22 ;HANDLE FULL ; DIRECTORY
23	Rename file.	Address of FCB with old file name and type in first 16 bytes and the new file name in the next 16 bytes	Directory address of old file, or 255H if not found. The file name and type are changed to that specified.	LXI MVI CALL JM	D,FCB C,RENAM NTRY NOFILE	;RENAM = 23 ;HANDLE NOT FOUND
24	Interrogate disk log-in.	None	Byte with 1 bit set for each disk logged in. LSB = disk A, etc.			
25	Interrogate drive number.	None	Number of disk to be used for next access.			
26	Set DMA address.	Address of 128-byte buffer	None—subsequent reads and writes take data to/from memory beginning at this address.	LXI MVI CALL	D,BUFF C,26 NTRY	;BUFFER ADDRESS ;DMA SET FUNCTION
27	Interrogate allocation.	None	Address of the current disk-allocation data. (Used by STAT—not well documented.)			

*See listing 3 for subroutines and program usage.

Table 2: Summary of disk-access operations and disk-utility functions available on a standard CP/M operating system.

STATE OF THE ART MEMORY SYSTEMS

512KB SINGLE BOARD MULTIBUS® MEMORY

State of the Art Multibus Memory Design.
First to Offer 512KB on One Board.

The CI-8086 module is compatible with both 8 or 16 bit Multibus Systems.

PARITY — The CI-8086 generates and checks even parity with selectable interrupt on parity error.

FAST ACCESS AND CYCLE TIME — Data access is 270 NSEC and cycle time is 375 NSEC.

16 MEGA BYTE ADDRESSING — The memory is addressable in 16K increments up to 16 mega bytes.

LOW POWER CONSUMPTION — Total power consumption is under 8 watts.

SINGLE QTY. PRICE: 128K x 9 \$1350. 512K x 9 \$2995.

Tested and burned in. Full year warranty.

256KB LSI 11/23® SINGLE DUAL WIDTH BOARD

The First and Only 256KB Memory on a Single Dual Board.

4 MEGABYTE ADDRESS FIELD — Most memories available for the DEC PDP 11/23 are only addressable to 256K bytes (18 address lines). The CI-1123 is addressable to 4 mega bytes (22 address lines) so there is no need to worry about obsolescence.

FAST ACCESS AND CYCLE TIME — With an access time of 240 NSEC and cycle time of 400 NSEC one is insured the best throughput on the PDP 11/23 system.

PARITY — The CI-1123 generates and checks parity for each byte of memory. Totally DEC compatible.

BATTERY BACKUP POWER CONSUMPTION — Power requirement for the module is only 1.2 AMP from the 5 volt supply. The CI-1123 is easily configured for battery back-up mode of operation requiring only 300MA from a single 5 V back-up supply for 256KB memory in the down state.

SINGLE QTY. PRICE: 32K x 18 \$575. 128K x 18 \$1925.

64K x 9 EXORCISER® I SINGLE BOARD MEMORY

For Exorciser I, Exorciser II and Rockwell System 65.

FAST ACCESS AND CYCLE TIME — Data access time is 225 NSEC and cycle time is 400 NSEC, allowing the unit to work as a static RAM at clock rates in excess of 1.5 mega hertz. For 2 mega hertz operation the board can be easily configured to utilize a cycle stealing refresh operation.

ADDRESSING — On-board memory select is available in 4K increments up to 64K words of memory on either the VUA or VXA control inputs.

PARITY — On board even parity with output jumper select to the system bus as a parity error or non-maskable interrupt.

Complete board power consumption is under 7 watts.

SINGLE QTY. PRICE: 64K x 9 \$575.

DON'T ASK WHY WE CHARGE SO LITTLE, ASK WHY THEY CHARGE SO MUCH.

Text continued from page 270:

Proper use of these routines provides powerful capabilities for file manipulation, creation, and alteration. Tasks such as reading an application program into the proper region of memory, sending instructions with a file name, or detecting which disk drive a given file resides on (if any) are readily handled by CP/M. Let us see how these tasks may be accomplished.

Before a file can be manipulated by CP/M, its name must be made known to the system. This is done via the file-control block (FCB). A file-

control block contains six types of information defined with 33 contiguous bytes in memory (0 to 32):

- Entry type (ET, byte 0)—assumed 0 by CP/M. CP/M places hexadecimal E5 here to signify a deleted file.
- File name (FN, bytes 1 to 8)—ASCII characters padded with ASCII blanks.
- File type (FT, bytes 9 to 11)—ASCII characters padded with ASCII blanks.
- File extent (EX, byte 12)—in 128-record segments. If file is longer

than 128 records, this byte must be incremented to access the additional records. Normally, this will be initialized to 0.

- Initialize to 0 (bytes 13 to 14)—these bits may be used by some systems (such as Micropolis), but should not be tampered with.
- Record count (RC, byte 15)—current file size in 128-byte records. Initialized to 0—correct value will be supplied by executing the OPEN statement.
- Disk allocation map (DM, bytes 16 to 31)—this map is used by CP/M to access the desired file. It is written into memory by the OPEN command, updated during access, and written back to the directory by the CLOSE command. It is not necessary to initialize this area if OPEN is used.
- Next record (NR, byte 32)—this is the number of the next record to access in the currently open extent. Normally, this will be initialized to 0 unless random access is desired or a file is to have something appended to it.

File-control blocks are written to the directory by each CLOSE command; they are read by each OPEN command. They maintain the disk-file allocation map, size (in 128-byte records), and extent (in 128-record segments). A separate FCB is maintained in the directory for each extent of the same file (each extent contains 128 128-byte records). That is, a file of 158 records will have an entry with extent=0 and record count=128 and another entry with extent=1 and record count=30, both having the same file name and file type.

The system maintains a default FCB at hexadecimal location 005C and a default buffer at hexadecimal location 0080. These are used by CP/M to pass information to a user program. This is best explained by considering what happens when the program given in listing 4 is run. After it has been assembled and loaded, it is run by typing its name, as is any compiled program running under CP/M. However, in addition to its name, the name of the file to be processed and the desired options must be entered. For this example program, the file to be processed must have a file type .DEM. This file is read into memory beginning at the first free memory location after the end of the program. The options

Listing 2: Examples of some simple I/O routines that utilize the CP/M I/O functions.

SUBROUTINE RCHAR—READS A SINGLE CHARACTER FROM THE
CONSOLE. PLACES THE CHARACTER READ INTO THE
ACCUMULATOR (A REGISTER).

```

RFUNC    EQU    1                ;READ CONSOLE FUNCTION NUMBER
                                ;REFER TO TABLE I OF INTERFACE
                                ;GUIDE.
NTRY     EQU    0005H           ;CP/M NTRY POINT
RCHAR:   PUSH    H                ;PRESERVE REGISTERS
          PUSH    D
          PUSH    B
          MVI     C,RFUNC        ;PLACE CODE FOR READ FUNCTION
          CALL    NTRY           ;IN C REGISTER
          MOV     A,E            ;READ A CHARACTER
          ;MOVE CHARACTER JUST READ INTO
          ;A REGISTER.
          POP     B              ;RESTORE REGISTERS
          POP     D
          POP     H
          RET

```

SUBROUTINE WCHAR—WRITES A SINGLE CHARACTER TO THE
CONSOLE. ASSUMES THAT THE CHARACTER TO BE
WRITTEN IS IN THE A REGISTER.

```

WFUNC    EQU    2                ;CP/M FUNCTION NUMBER
WCHAR:   PUSH    H                ;PRESERVE ALL REGISTERS
          PUSH    D
          PUSH    B
          PUSH    PSW
          MOV     E,A            ;PLACE CHARACTER IN THE E
          ;REGISTER BEFORE CALLING NTRY
          MVI     C,WFUNC        ;PLACE FUNCTION NUMBER IN C
          CALL    NTRY           ;WRITE HIM
          POP     PSW            ;RESTORE REGISTERS
          POP     B
          POP     D
          POP     H
          RET

```

SUBROUTINE CLEAR—CLEARS THE SCREEN OF A SOROC IQ-120
TERMINAL. USES SUBROUTINE WCHAR TO SEND THE
CHARACTERS TO THE TERMINAL.

```

HOME     EQU    42                ;HOMES CURSOR AND CLEARS SCREEN
CLEAR:   PUSH    PSW            ;PROTECT STATUS FROM CALLING ROUTINE
          MVI     A,27          ;SEND ESCAPE CODE
          CALL    WCHAR         ;WRITE HIM
          MVI     A,HOMES      ;CLEAR SCREEN AND HOME CURSOR
          CALL    WCHAR         ;WRITE AGAIN
          POP     PSW            ;RESTORE STATUS
          RET

```

Notice of Omission

The PRACTICAL MICROCOMPUTER PROGRAMMING™ books...

WHAT DO THE CRITICS SAY?

BYTE: "It was apparently Mr. Weller's goal from the beginning to present the fundamental concepts of assembly language programming in a completely nonthreatening way. He has accomplished this better than any other author to date... Practical Microcomputer Programming is a very powerful series. It is well written and full of essential techniques for the assembly language programmer..." "The authors know the difference between a novice and a ninny. They never talk down... on every page the authors spot and clear up the small ambiguities of technical jargon that can block understanding."

Kilobaud: "A powerful plus for this book is the author's determination to demonstrate why and how to use each instruction, not merely to explain how it works... At no point do the authors resort to rehashing material available from the manufacturer... but instead choose a less theoretical, more practical approach."

Leventhal: "...large numbers of documented, well structured examples, and a clear readable style, a logical development of major topics."

Digital Design: "This book is the best and most lucid introduction to Z80 programming that we have seen."

CACHE: "This is an EXCELLENT book... dirt cheap for such great software and documentation."

IF YOU'VE TRIED THE "CHEAPIES" AND AREN'T SATISFIED WITH WHAT YOU GOT, IT'S TIME TO TRY THE REAL THING, THE ACKNOWLEDGED WORLD STANDARD OF TECHNICAL EXCELLENCE IN ASSEMBLY LANGUAGE PROGRAMMING INSTRUCTION—THE PRACTICAL MICROCOMPUTER PROGRAMMING BOOKS.

- FOR THE 6502 -

PRACTICAL MICROCOMPUTER PROGRAMMING: THE 6502 by W. J. Weller \$32.95
20 chapters, 6 appendices, 475 page Smythe sewn hardcover covering all fundamental assembly language techniques for the 6502 processor. The text explanation is re-enforced with 118 verified, real world programming examples that run on real computers. An extended 6502 language, supported by a new editor/assembler which comes with the book, circumvents many of the problems which have made the 6502 so difficult to program in the past. In addition to the fundamental technique chapters, there are special chapters covering simple graphics, elementary cryptography and random number generation and use. The source texts of both the editor/assembler and a powerful new debugging monitor for the Apple II and Apple II+ included in appendices. The object code for this software is supplied FREE to book purchasers on Apple cassette or for \$7.50 on disk when the licensing agreement from the book is returned to the publisher. The editor/assembler is also available on paper tape for users of other 6502 based systems.

- FOR THE Z80 -

PRACTICAL MICROCOMPUTER PROGRAMMING: THE Z80 by W. J. Weller \$32.95
18 chapters, 4 appendices, 481 page Smythe sewn hardcover which details assembly language technique as applied to the Z80 processor. The Z80 is treated as an 8080 superset in an 8080 extension language, which means that you don't have to discard your hard won 8080 knowledge to program the Z80. In addition to the fundamental chapters there are chapters on graphic output and full four function decimal arithmetic. The text explanation is re-enforced with 104 tested, verified programming examples. A powerful editor/assembler and debugging monitor, in source form, are provided to support the language used in the book. This software will run on any Z80 based computer with 10K RAM beginning at 0. Object code for both editor/assembler and debugging monitor is sent to book purchasers FREE on paper tape or, in modified form, on TRS-80 Level II cassette when the coupon from the book is returned to the publisher.

- FOR THE 8080 -

PRACTICAL MICROCOMPUTER PROGRAMMING: THE INTEL 8080 by Weller, Shatzel and Nice \$23.95
18 chapters, 3 appendices, 318 page Smythe sewn hardcover which applies fundamental assembly language technique to this most popular of processors. The text is supported by 84 separate programming examples. The book includes a special section on the handling of complex peripheral devices and exotic typefaces. Appendices give the source for an 8080 resident debugging monitor and a minicomputer cross assembler for the 8080. Also available (not shown above) are a workbook for use with this text (\$9.95) and AN EDITOR/ASSEMBLER SYSTEM FOR 8080/8085 BASED COMPUTERS (\$15.95) which supports the language used in the text. These three books together make a complete teaching package for the 8080.

- FOR THE 6800 -

PRACTICAL MICROCOMPUTER PROGRAMMING: THE M6800 by W. J. Weller \$23.95
16 chapters, 2 appendices, 299 page Smythe sewn hardcover text which details the application of fundamental assembly language technique to the 6800. 104 separate programming examples re-enforce the text explanation. Contains in addition special chapters on low precision trigonometry and random number generation and use. A resident debugging monitor for 6800 systems is included in an appendix.

NO GAMES, NO NONSENSE, NO REPRODUCTIONS OR REHASHES OF MANUFACTURER'S DATA SHEETS, JUST TESTED, ACCURATE, RELEVANT PROGRAMMING INFORMATION BACKED UP BY REAL EXAMPLES THAT RUN ON REAL COMPUTERS—THE PRACTICAL MICROCOMPUTER PROGRAMMING BOOKS. THERE IS NOTHING ELSE AS GOOD ANYWHERE, AT ANY PRICE.

QUALITY DISK SOFTWARE

BACKED BY ON-GOING APPLICATIONS SUPPORT

APPLE II (A)

TRS-80 (T)

HOME FINANCE PAK I: Entire Series \$49.95 (A) (T)

CHECK REGISTER AND BUDGET: This comprehensive CHECKING ACCOUNT MANAGEMENT SYSTEM not only keeps complete records, it also gives you the analysis and control tools you need to actively manage your account. The system provides routines for BUDGETING INCOME AND EXPENSE, AUTOMATIC CHECK SEARCH, and BANK STATEMENT RECONCILING. CRT or printer reports are produced for ACTUAL EXPENSE vs BUDGET, CHECK SEARCH DISPLAY RECONCILIATION REPORT and CHECK REGISTER DISPLAY by month. Check entry is prompted by user-defined menus of standard purposes and recipient codes, speeding data entry and reducing disk storage and retrieval time. Six fields of data are stored for each check: amount, check no., date, purpose, recipient and TAX DEDUCTIBLE REMINDER. CHECK SEARCH routines allow searching on any of these data fields. Up to 100 checks/mo. storage \$39.95

SAVINGS: Account management system for up to 20 separate Savings accounts. Organizes, files and displays deposits, withdrawals and interest earned for each account. \$14.95

CREDIT CARD: Get Control of your credit cards with this program. Organizes, stores and displays purchases, payments and service charges for up to 20 separate cards or bank loans. \$14.95

UNIVERSAL COMPUTING MACHINE: \$49.95 (A)

A user programmable computing system structured around a 50 row x 50 column table. User defines row and column names and equations forming a unique computing machine. Table elements can be multiplied, divided, subtracted or added to any other element. Hundreds of unique computing machines can be defined, used, stored, and recalled, for later use. Excellent for sales forecasts, budgets, inventory lists, income statements, production planning, project cost estimates-in short for any planning, analysis or reporting problem that can be solved with a table.

COLOR CALENDAR: \$29.95 (A)

Got a busy calendar? Organize it with Color Calendar. Whether it's birthdays, appointments, business meetings or a regular office schedule, this program is the perfect way to schedule your activities.

The calendar display is a beautiful HI-RES color graphics calendar of the selected month with each scheduled day highlighted in color. Using the daily schedule, you can review any day of the month and schedule an event or activity in any one of 20 time slots from 8:00 A.M. to 5:30 P.M.

BUSINESS SOFTWARE: Entire Series \$159.95 (A) (T)

MICROACCOUNTANT: The ideal accounting system for small businesses. Based on classic T-accounts and double-entry booking, this efficient program provides a journal for recording posting and reviewing up to 1,000 transactions per month to any one of 300 accounts. The program produces CRT and printer reports covering:

TRANSACTION JOURNAL	BALANCE SHEET
ACCOUNT LEDGERS	INCOME AND EXPENSE STATEMENT

Includes a short primer on Financial Accounting. (48K) \$49.95

UNIVERSAL BUSINESS MACHINE: This program is designed to SIMPLIFY and SAVE TIME for the serious businessman who must periodically Analyze, Plan and Estimate. The program was created using our Universal Computing Machine and it is programmed to provide the following planning and forecasting tools.

CASH FLOW ANALYSIS	SALES FORECASTER
PROFORMA PROFIT & LOSS	SOURCE AND USE OF FUNDS
PROFORMA BALANCE SHEET	JOB COST ESTIMATOR
REAL ESTATE INVESTMENT	INVENTORY ANALYSIS

Price, including a copy of the Universal Computing Machine \$89.95

BUSINESS CHECK REGISTER AND BUDGET: Our Check Register and Budget programs expanded to include up to 50 budgetable items and up to 400 checks per month. Includes bank statement reconciling and automatic check search (48K) \$49.95

ELECTRONICS SERIES VOL I & II: Entire Series \$259.95

LOGIC SIMULATOR: SAVE TIME AND MONEY. Simulate your digital logic circuits before you build them. CMOS, TTL, or whatever, if it's digital logic, this program can handle it. The program is an interactive, menu driven, full-fledged logic simulator capable of simulating the bit-time response of a logic network to user-specified input patterns. It will handle up to 1000 gates, including NANDS, NORs, INVERTERS, FLIP-FLOPS, SHIFT REGISTERS, COUNTERS and user-defined MACROS, up to 40 user-defined random, or binary input patterns. Accepts network descriptions from keyboard or from LOGIC DESIGNER for simulation \$159.95 (A) (T)

LOGIC DESIGNER: Interactive HI-RES graphics program for designing digital logic systems. Draw directly on the screen up to 10 different gate types, including NAND, NOR, INVERTER, EX-OR, T-FLOP, JK-FLOP, D-FLOP, RS-FLOP, 4 BIT COUNTER and N-BIT SHIFT REGISTER. User interconnects gates using line graphics commands. Network descriptions for LOGIC SIMULATOR generated simultaneously with the CRT diagram being drawn \$159.95 (A)

MANUAL AND DEMO DISK: Instruction Manual and demo disk illustrating capabilities of both program (s) \$29.95 (A) (T)

ELECTRONIC SERIES VOL III & IV: Entire Series \$259.95

CIRCUIT SIMULATOR: Tired of trial & error circuit design? Simulate & debug your designs before you build them! With CIRCUIT SIMULATOR you build a model of your circuit using RESISTORS, CAPACITORS, INDUCTORS, TRANSISTORS, DIODES, VOLTAGE and CURRENT SOURCES and simulate the waveform response to inputs such as PULSES, SINUSOIDS, SAWTOOTHs, etc., all fully programmable. The output is displayed as an OSCILLOSCOPE-STYLE PLOT of the selected waveforms (Apple only) or as a printed table of voltage vs time. Handles up to 200 notes and up to 20 sources. Requires 48 RAM \$159.95 (A) (T)

CIRCUIT DESIGNER: Interactive HI-RES graphics program for designing electronic circuits. Draw directly on the screen up to 10 different component types, including those referenced above. Components interconnect list for CIRCUIT SIMULATOR generated automatically. Requires \$159.95

MATHEMATICS SERIES: Entire Series \$49.95

STATISTICAL ANALYSIS I: This menu driven program performs LINEAR REGRESSION analysis, determines the mean, standard deviation and plots the frequency distribution of user-supplied data sets. Printer, Disk, I/O routines \$19.95

NUMERICAL ANALYSIS: HI-RES 2-Dimensional plot of any function. Automatic scaling. At your option, the program will plot the function, plot the INTEGRAL, plot the DERIVATIVE, determine the ROOTS, MAXIMA, MINIMA, INTEGRAL VALUE \$19.95

MATRIX: A general purpose, menu driven program for determining the INVERSE and DETERMINANT of any matrix, as well as the SOLUTION to any set of SIMULTANEOUS LINEAR EQUATIONS. \$19.95

3-D SURFACE PLOTTER: Explore the ELEGANCE and BEAUTY of MATHEMATICS by creating HI-RES PLOTS of 3-dimensional surfaces from any 3-variable equation. Disk save and recall routines for plots. Menu driven to vary surface parameters. Hidden line or transparent plotting \$19.95

ACTION ADVENTURE GAMES: Entire Series \$29.95 (A)

RED BARON: Can you outfly the RED BARON? This fast action game simulates a machine-gun DOGFIGHT between your WORLD WAR I BI-PLANE and the baron's. You can LOOP, DIVE, BANK or CLIMB-and so can the BARON. In HI-RES graphics plus sound. \$14.95

BATTLE OF MIDWAY: You are in command of the U.S.S. HORNETS' DIVE-BOMBER squadron. Your targets are the Aircraft carriers, Akagi, Soryu and Kaga. You must fly your way through ZEROS and AA FIRE to make your DIVE-BOMB run. In HI-RES graphics plus sound. \$14.95

SUB ATTACK: It's April 1943. The enemy convoy is headed for the CONTROL SEA. Your sub, the MORAY, has just sighted the CARRIERS and BATTLESHIPS' Easy pickings. But watch out for the DESTROYERS - they're fast and deadly. In HI-RES graphics plus sound \$14.95

FREE CATALOG: All programs are supplied on disk and run on Apple II w /Disk & Applesoft ROM Card & TRS-80 Level II and require 32K RAM unless otherwise noted. Detailed instructions included. Orders shipped within 5 days. Card users include card number. Add \$1.50 postage and handling with each order. California residents add 6 1/2% sales tax. Foreign orders add \$5.00 postage and handling.

Text continued from page 274:

available are P, which prints the file on the system printer, and D, which creates a copy of the input file having type .RES. The input file may reside on drive A or B, but it is assumed to be on A unless otherwise specified. If option D is selected, the output file will be on the same drive as the input file.

Now, let us discuss the use of the default FCB and buffer. When the command DSKUTIL TEST.PD is entered in response to the CP/M prompt, the system places TEST in bytes 1 thru 4 of the FCB beginning at location 005C. PD is placed in bytes 9 and 10. The string (as typed) is also placed in the default buffer at location 0080 in the following manner:

byte 0 (that is, hexadecimal location 0080) contains the number of valid characters typed on the command line after the actual command and before a carriage return, in decimal. In this case, bTEST.PD (b represents a space—decimal ASCII 32) was typed—8 characters before a carriage return. Byte 0 of the buffer therefore

SPEND \$62.40 TO READ THIS ADVERTISEMENT.*

A salesman generating 1.5 million dollars in sales annually for his company does so at the rate of \$12.48 per minute. That's expensive time—should it really be used in rummaging through filing cabinets, writing long reports or talking to dozens of people looking for one small, crucial piece of information?

Of course not, so you hire an accounting staff, customer support personnel, and marketing people to support the business and let your salespeople sell. But the overhead takes a large slice of that \$12.48.

A Delta system can do the work of a swarm of secretaries, a fleet of filers, a ton of telephones—simultaneously. It's a highly developed work processing system that can maintain files, generate reports, process orders and do all routine office work with speed and accuracy. It lets your people get on with the business of making money.

We at Delta Products have spent five years designing the most reliable, efficient Z80 based microcomputer available on the marketplace. It's fast—some models use multi processors to eliminate the delays associated with other multi user systems. It's expand-

able, allowing your Delta system to grow with your company's growth and change with your company's needs. And it's rugged; requiring a minimum of service or maintenance.

But the soul of any computer system is the software; therefore, having perfected the hardware technology, Delta is now dedicated to the development of application packages designed to warm the cockles of a corporate executive's heart. Our "Uni-form", for example, will keep purchase orders, account statements, sales and shipping orders indexed, cross-indexed and filed in any manner required.

And when your Delta system has helped your business grow, it's ready to grow right along with you—every Delta System is completely expandable and configurable.

You have spent five minutes reading this advertisement, at a cost of \$62.40 in potential sales. Have you calculated what a Delta system can save your company? (Hint: a Delta system can pay for itself in less than 24 hours of time saved.)

Call us today for the name of your nearest Delta distributor.

dBASE II™ vs. the Bilge Pumps.

by Hal Pawluk

We all know that bilge pumps suck.

And by now, we've found out—the hard way—that a lot of software seems to work the same way.

So I got pretty excited when I ran across **dBASE II**, an assembly-language relational Database Management System for CP/M. It works! And even a rank beginner like myself got it up and running the first time I sat down with it.

If you're looking for software to deal with your data, too, here are some tips that will help:

Tip #1: Database Management vs. File Handling:

Any list or collection of data is, loosely, a data base, but most of those "data base management" articles in the buzzbooks are really about file handling programs for specific applications. A real Database Management System gives you data and program independence (no reprogramming when data changes), eliminates data duplication and makes it easy to turn data into information.

Tip #2: Assembly Language vs. BASIC:

This one's easy: if you're setting up a DBMS, you're going to be doing a lot of sorting, and Basic sorts are s-l-o-w. Run a benchmark on a Basic system like S*-IV against a relational DBMS like **dBASE II** and you'll see what I mean. (But watch it: I've also seen one extremely slow assembly-language file management system.)

Tip #3: Relational vs. Hierarchal & Network DBMS.

CODASYL-like hierarchal and network systems, around since the 1960's, are being phased out on the big machines so why get stuck with an old-fashioned system for your micro? A relational DBMS like **dBASE II** eliminates the pre-defined sets, pointers and complex data structures of a CODASYL-type DBMS. And you don't need to be a programmer to use it.

dBASE II vs. everything else.

dBASE II really impressed me.

Written in assembly language (with no need for a host language), it handles up to 65,000 records (up to 32 fields and 1000 bytes each), stores numeric data as packed strings so there are no round-off errors, has a super-fast multiple-key sort, and supports ISAM based on B* trees.

You can use it interactively with English-like commands (DISPLAY 10 PRODUCTS), or program it

(so when you've set up the formats, your secretary can do the work). Its report generator and user-definable full screen operations mean that you can even use your existing forms.

And if all this makes your mouth water, but you've already got all your data on a disk, that's okay: **dBASE II** reads your ASCII files and adds the data to its own database.

Right now, I'm using **dBASE II** with my word processor for budgeting, scheduling and preparing reports for my clients.

Next come job costing, time billing and accounting.

An Unheard-of Money-Back Guarantee.

dBASE II is the first software I've seen with a full money-back guarantee.

To check it out, just send \$700 (plus tax in California) to Ashton-Tate, 3600 Wilshire Blvd., Suite 1510, Los Angeles, CA 90010. (213) 666-4409. Test **dBASE II** doing your jobs on your computer for 30 days. If, for some strange reason, you don't want to keep it, send it back and they'll refund your money.

No questions asked.

They know you don't need your bilge pumped.

Ashton-Tate

ITS MAGIC[®]

The System/48 is the outstanding office automation computing system for the 80's . . . it's so productive we call it MAGIC[®]. Look at these features:

- Data management system
- Report generator
- Query processor
- Screen format generator
- Automatic interface code generator
- From one to eight interactive users per node
- Over half a million bytes of user memory available
- Winchester-technology hard disk with 18-million bytes (formatted capacity)
- 15-minute mean-time-to-repair
- Built-in protection from line-voltage spikes, noise, and brownouts

And, it features MAGIC[®], the Operating System that gets things done faster than you can say abracadabra because of its multi-keyed Indexed-Sequential Access Method and flexible file-organization. MAGIC[®] also offers high security, with password protection. MAGIC[®] supports global or local printers for as many users as desired.

Circle 359 on inquiry card.

MAGIC[®] also includes DataMagic II[®] — TEI's red-hot database manager. DataMagic II[®] has even more tricks up its sleeve — like automatic or manual record-lock protection and automatic transaction backout to protect the database and it runs application software written for CP/M 2.X.

Take a MAGIC[®] leap into the future!

Arrange to attend one of our regularly scheduled System/48 workshops (RSVP).

The Text Solution for APPLE II®

Now APPLE II® Owners Can Solve Text Problems With VIDEOTERM 80 Column by 24 Line Video Display Utilizing 7 X 9 Dot Character Matrix

Perhaps the most annoying shortcoming of the Apple II® is its limitation of displaying only 40 columns by 24 lines of text, all in uppercase. At last, Apple II® owners have a reliable, trouble-free answer to their text display problem. VIDEOTERM generates a full 80 columns by 24 lines of text, in upper and lower case. Twice the number of characters as the standard Apple II® display. And by utilizing a 7 by 9 character matrix, lower case letters have true descenders. But this is only the start.

VIDEOTERM, MANUAL, SWITCHPLATE

VIDEOTERM

BASICs VIDEOTERM lists BASIC programs, both Integer and Applesoft, using the entire 80 columns. Without splitting keywords. Full editing capabilities are offered using the ESCape key sequences for cursor movement. With provision for stop/start text scrolling utilizing the standard Control-S entry. And simultaneous on-screen display of text being printed.

Pascal Installation of VIDEOTERM in slot 3 provides Pascal immediate control of the display since Pascal recognizes the board as a standard video display terminal and treats it as such. No changes are needed to Pascal's MISC.INFO or GOTOTY files, although customization directions are provided. All cursor control characters are identical to standard Pascal defaults.

Other Boards The new Microsoft Softcard® is supported. So is the popular D. C. Hayes Micro-modem II®, utilizing customized PROM firmware available from VIDEX. The powerful EasyWriter® Professional Word Processing System and other word processors are now compatible with VIDEOTERM. Or use the Mountain Hardware ROMWriter® (or other PROM programmer) to generate your own custom character sets. Naturally, VIDEOTERM conforms to all Apple OEM guidelines, assurance that you will have no conflicts with current or future Apple II® expansion boards.

Advanced Hardware Design

VIDEOTERM's on-board asynchronous crystal clock ensures flicker-free character display. Only the size of the Pascal Language card, VIDEOTERM utilizes CMOS and low power consumption ICs, ensuring cool, reliable operation. All ICs are fully socketed for easy maintenance. Add to that 2K of on-board RAM, 50 or 60 Hz operation, and provision of power and input connectors for a light pen. Problems are designed out, not in.

Available Options

The entire display may be altered to inverse video, displaying black characters on a white field. PROMs containing alternate character sets and graphic symbols are available from Videx. A switchplate option allows you to use the same video monitor for either the VIDEOTERM or the standard Apple II® display, instantly changing displays by flipping a single toggle switch. The switchplate assembly inserts into one of the rear cut-outs in the Apple II® case so that the toggle switch is readily accessible. And the Videx KEYBOARD ENHANCER can be installed, allowing upper and lower case character entry directly from your Apple II® keyboard.

Firmware

1K of on-board ROM firmware controls all operation of the VIDEOTERM. No machine language patches are needed for normal VIDEOTERM use.

Firmware Version 2.0

Characters	7 x 9 matrix	Display	24 x 80 (full descenders)
Options	7 x 12 matrix option; Alternate user definable character set option; Inverse video option.		18 x 80 (7 x 12 matrix with full descenders)

Want to know more? Contact your local Apple dealer today for a demonstration. VIDEOTERM is available through your local dealer or direct from Videx in Corvallis, Oregon. Or send for the VIDEOTERM Owners Reference Manual and deduct the amount if you decide to purchase. Upgrade your Apple II® to full terminal capabilities for half the cost of a terminal. VIDEOTERM. At last.

PRICE: • VIDEOTERM includes manual . . . \$345
• SWITCHPLATE . . . \$ 19
• MANUAL refund with purchase . . . \$ 19
• 7 x 12 CHARACTER SET . . . \$ 39
• MICROMODEM FIRMWARE . . . \$ 25

APPLE II® OWNERS!

introducing the KEYBOARD & DISPLAY ENHANCER

- PUT THE SHIFT AND SHIFT LOCK BACK WHERE IT BELONGS
- SEE REAL UPPER AND lower CASE ON THE SCREEN
- ACCESS ALL YOUR KEYBOARD ASCII CHARACTERS

Videx has the perfect companion for your word processor software: the **KEYBOARD AND DISPLAY ENHANCER**. Install the enhancer in your APPLE II and be typing in lower case just like a typewriter. If you want an upper case character, use the SHIFT key or the CTRL key for shift lock. Not only that, but you see upper and lower case on the screen as you type. Perfectly compatible with Apple Writer and other word processors like, for example, Super-Text.

If you want to program in BASIC, just put it back into the alpha lock mode: and you have the original keyboard back with a few im-

provements. Now you can enter those elusive 9 characters directly from the keyboard, or require the Control key to be pressed with the RESET to prevent accidental resets.

KEYBOARD AND DISPLAY ENHANCER is recommended for use with all revisions of the APPLE II. It includes 6 ICs, and EPROM and dip-switches mounted on a PC board, and a jumper cable. Easy installation, meaning no soldering or cutting traces. Alternate default modes are dip-switch selectable. You can even remap the keyboard, selecting an alternate character set, for custom applications.

PRICE • KDE-700 (REV. 7 or greater) . . . \$129.
• KDE-000 (REV. 6 or less) . . . \$129.

Wild Hare Software Systems Multiply the Capabilities of Data General's

**RDOS
INFOS®
ICOS
DOS**

Wild Hare gives Data General users a choice when upgrading to a multi-user environment and eliminates the need to use AOS. Wild Hare makes it easy for you. It creates a true multi-lingual, multi-user environment for your current system. No user software modifications are necessary. There is no need to install a new operating system. And, no expensive hardware upgrade is required.

Features

- Each user is totally independent of all other users.
- Each user may run all standard Data General software.
- Each user may independently edit, compile, execute and debug programs written in any language supported by RDOS, INFOS®, ICOS and DOS.
- Standard languages supported include: Fortran IV, Fortran V, COBOL, ALGOL, RPG, DG/L™, BASIC, PASCAL, MAC, etc.
- All NOVA's® and ECLIPSE's® are supported.
- Wild Hare guarantees its software systems on a money back basis.

**Wild Hare's Software
Gives Data General Users
A Choice!**

"WITH THE UCSD p-SYSTEM,TM WE CAN WRITE ONE APPLICATION THAT GOES FROM APPLE TO ZENITH."

HARRY BLAKESLEE, President, Denver Software

Our business is bigger and better than ever. A lot of the credit for that goes to the UCSD p-System software from SofTech Microsystems. It's given us ten times the market we used to have.

We can write a single, sophisticated applications program with the UCSD p-System—like our financial management package—and it just keeps on running. On Apple, Commodore, Ohio Scientific, Texas Instruments, Zenith, and more. That's the real beauty of the UCSD p-System. Any program you write for one microcomputer runs on others, both today and tomorrow. You protect your software investment, without restricting your hardware options.

And with the UCSD p-System, you can use the language of your choice—UCSD Pascal,TM FORTRAN-77, BASIC, or assembly language. All are backed by SofTech Microsystems, a leading system software company who's been around for over a decade, who knows how to develop professional quality software, and who's committed to delivering it.

Get a head start on tomorrow. With the microcomputer software that goes from "A" to "Z." Distribution licensing and single copies available. Write or call for details, so you can start going places, too.

SOFTech
MICROSYSTEMS
A SUBSIDIARY OF SOFTECH

For the software that's going places.

PERIPHERALS FOR ATARI 400 & 800

16K MEMORY BOARD: AT-16

- 16K 4116 RAM (200NS)
- Assembled and tested
- No modifications - hardware or software
- Compatible with Atari 800
- One year warranty
- Price: \$119.50

32K MEMORY BOARD: AT-32

- 32K 4116 RAM (200NS)
- Assembled and tested
- No modifications - hardware or software
- Compatible with Atari 400/800
- One year warranty
- Price: \$199.50

PARALLEL PRINTER CABLE: ATC-1

- Pre-tested
- 3' length
- Centronics compatible
- DB15 to Amphenol 57-30360
- Price: \$39.50

SERIAL (RS-232) PRINTER CABLE: ATC-2

- Pre-tested
- 3' length
- DB15 to DB25 connectors
- Price: \$39.50

EXTENDER BOARD: ATB-1

- Raises board 3 inches
- Ideal for prototype boards
- Price: \$39.50

Anti-Static Dust Covers

Protect your computer and accessories.

- Anti-static vinyl helps prevent static from damaging sensitive components and causing faulty operation.
- Double-fold stitching will not rip out and is unmatched for strength and long life.
- Heavy gauge textured vinyl blends with any decor and folds easily for convenient storage.
- Over 1000 custom designs guaranteed to fit precisely.
- 100% satisfaction guarantee means we stand behind our product.

Yes, there are differences in Dust Covers. Differences which can be vitally important to the proper functioning of your system.

At Cover Craft we've manufactured the highest quality Dust Covers for the electronics industry for more than six years. We've been selected by major equipment manufacturers to make covers for their products. Our covers are in use in every state and in more than 50 countries. We know what it takes!

The MX-100. Not just better. Bigger.

Epson.

Our MX-80 was a pretty tough act to follow. I mean, how do you top the best-selling printer in the world?

Frankly, it wasn't easy. But the results of all our sleepless nights will knock your socks off.

The MX-100 is a printer that must be seen to be believed. For starters, we built in unmatched correspondence quality printing, and an ultra-high resolution bit image graphics capability. Then we added the ability to print up to 233 columns of information on 15" wide paper to give you the most incredible spread sheets you're ever likely to see. Finally, we topped it all off with *both* a satin-smooth friction feed platen *and* fully adjustable, removable tractors. And the list of standard features goes on and on and on.

Needless to say, the specs on this machine — and especially at under \$1000 — are practically unbelievable. But there's something about the MX-100 that goes far

beyond just the specs; something about the way it all comes together, the attention to detail, the fit, the feel. Mere words fail us. But when you see an MX-100, you'll know what we mean.

All in all, the MX-100 is the most remarkable printer we've ever built. Which creates rather a large problem for those of us at Epson.

How are we going to top this?

Your next printer.

Text continued from page 282:

contains 8. The next 8 characters are the exact line as typed: bTEST.PD. This buffer may now be scanned for valid commands by the user program; listing 4 illustrates a method of doing this.

If a second file name and file type had been specified, they would have been placed in the second 16 bits of the default FCB and written into the buffer. Any data placed in the buffer or FCB in this manner must be read by the user program before doing any disk access, or it will be lost. The first file name/file type may be left in the default FCB, but the second one must be moved elsewhere before accessing any file utilities (including directory utilities). In listing 4, valid commands are searched for, then the file type .DEM is placed in the FCB and bytes 12 thru 15 and 32 are zeroed. The file may now be opened and accessed.

Listing 4 illustrates one other important point about the FCB: the method of creating additional FCBs. TFCB1 is thirty-three reserved locations that serve as a second FCB in the same manner as the default FCB. The file name is moved into bytes 1 thru 8, the file type .RES is placed in bytes 9 thru 11, and the remaining bytes are defined in a similar manner to the default FCB. Using this method, additional FCBs may be created as needed. The address of the FCB of the file to be operated on is sent in the call to the CP/M entry point in register pair DE.

One other important consideration in actually reading and writing to a disk file is the need to set the DMA (direct memory access) address. This is the beginning memory address for the next disk access. The 128-byte record read from (or written to) the disk is placed into (or taken from) memory beginning at this location. When the disk system is initialized, using functions 13 or 14, the DMA address is set to hexadecimal 0080, the default buffer. It is possible to read one record to this buffer and then transfer the data to where it is needed; however, there is a simpler way illustrated in listing 4. Set the DMA address to the desired destination address and read a record. Put this function in a loop to read an entire file. Files may also be written in a similar manner (see listing 4).

Possibilities

In the course of experimenting with CP/M—trying to discover the hidden meaning in commands not thoroughly explained in the manuals—I discovered a few interesting features. These features often have no explanation in the manual. First, the directory of any disk can be read by placing ???????? and ??? in the file-name and file-type bytes of an FCB, then doing a SEARCH and SEARCH NEXT (functions 17 and 18). These two functions write directory information into the default buffer at hexadecimal location 0080, where it may be accessed for printout.

The OPEN function first finds a file name/file type match, then copies the disk map into the FCB. If a disk map is supplied with an extent, record count, and next record, the READ or WRITE functions will work without first using OPEN. The CLOSE statement merely matches the file name/file type and writes the FCB disk map to the directory.

These last two items should suggest some interesting but dangerous possibilities. The fact that CP/M marks a file as deleted by placing the hexadecimal character E5 in the entry-type field suggests a possible way to protect a file simply by making it disappear. The FCB still appears in the directory, but no longer matches any search string. This one needs more experimentation, since writing to a disk with files erased in this manner can result in destroying files only meant to be hidden.

Conclusion

This article has presented the use of the CP/M-utility routines, typical calling sequences, applications sub-routines, sent and returned values, and examples of their uses. Although written specifically for CP/M, it illustrates the general method of using utility routines supplied with an operating system. In addition, some possibilities for further experimentation with CP/M have been suggested. It is not meant to supplant the Digital Research manuals, but to supplement and clarify a portion of them. You should refer to the manuals for additional information. ■

High resolution, dot addressable graphics with vertical resolution of 72 dots per inch and up to 82 dots per inch horizontal resolution.

Single sheet feeder is very simple to use. The only front load feeder available on the market today.*

"Q.T." cover reduces noise to an office comfort level. This is an optional feature to our standard sound deadening case.

1K standard buffer permits the 88G to print while receiving data. The optional 2K buffer allows a 1920 character dump to the printer freeing the CRT.

The Features Leader

Integrated Paper Handling System

Dual tractor/friction feed allows use of pin feed, roll or single sheet paper.

Versatile Interface

Data input from most computers can be supported by the 88G. RS232C serial and Centronics® type parallel is standard. Options can be added for current loop, IEEE 488 and high speed serial inputs.

Letter Quality Capability

The 88G provides a selectable 11 x 7 serif style dot matrix for correspondence printing.

Cost Effective

The 88G has more features than any other impact printer in its price class. First compare the quality of the 88G, then compare the price—the 88G wins! Single unit price is less than \$800.

Build a Super Simple Floppy-Disk Interface

Part 2: Software

James Nicholson and Roger Camp
1046 Gaskill
Ames IA 50010

The first part of this article presented basic floppy-disk technology and a description of a simple controller design with its circuit details. This controller provides a great deal of function and flexibility when combined with some simple software.

Software

The software shown in listing 1 provides disk-formatting, reading, writing, and error-recovery functions. The software can be reassembled to allow relocation of program or page zero variables. Various entry points are shown in table 4.

Before using the FD1771 to read and write data within the sectors on the floppy disk, the disk must be formatted to conform to a certain structure. A program (entry point FORMAT) is supplied that formats all 77 tracks of a standard 8-inch disk in a standard IBM-compatible 128-bytes-per-sector arrangement (each track contains 26 sectors).

The program, when called, initializes all 6520 and 1771 electronic interfaces before writing the standard track. The initialization process guarantees that the head is positioned over the outermost track. Each track is written from a standard pattern contained in programmable memory. A 40 ms delay is generated following a step-in function to move the head to the next track. This guarantees the proper head-settling time required by the floppy-disk drive. This process

continues until all tracks have been formatted.

Sector sizes other than 128 bytes can be selected by initializing the 1771 differently. (A sector size other than 128 can lead to incompatibilities with other floppy-disk systems.) For sector lengths greater than 128, the FORMAT program must be rewritten to use an entire track image in memory. This is required because of an indexing limit of 256 using the 6502 microprocessor. Our system, using sixteen 256-byte sectors per track, has proven to be a convenient alternative.

When a disk is properly formatted, the basic I/O (input/output) program (entry point FDENT) can be used. If the system has just been turned on, entry point FDENT should be called first to initialize all interface and drive electronics. To perform disk

operations, certain variables must be set up before calling FDENT. They include the desired *command*, *track number*, and *sector number*, as well as the address in memory used for data transfer (see table 5).

The program begins by analyzing the command to determine which segment of the program must be used in response. There are three basic command types:

- head movement
- read/write sectors
- read/write raw tracks

In the case of read/write commands, the program ascertains if the head is positioned properly and, if necessary, provides the seek command to move it.

Following execution of the command by the 1771, completion

Name	Purpose
FORMAT	Write proper track format on all 77 tracks
FDINT	Initialize 6520 and 1771 interface
FDENT	Perform basic floppy-disk operations using established variables
FDIO	Uses FDENT, followed by error checking and retry

Table 4: Entry points for various floppy-disk controller operations.

Name	Length in Bytes	Purpose
DVCODE	1	Device-selection byte 00 = DVC 0, 80 = DVC 1
ERRCODE	1	FF = Error, 00 = Normal Set by FDIO
COMMAND	1	1771 Command byte
STATUS	1	1771 Completion status
TRACK	1	Desired track value
SECTOR	1	Desired sector value
FDBUF	2	Address of data buffer

Table 5: Variables used to perform floppy-disk operations. All values are listed in hexadecimal.

The numbering of all nontext material is continued from part 1 of this article.

BYTEWRITER-1

The World's First Under \$300 80 Column Dot Matrix Printer

PRICE BREAKTHROUGH FROM MICROTEK

Bytewriter-1, the \$299 printer that has taken the industry by storm! A product made possible through cost-effective design, efficient manufacturing operations, a proven low-cost print mechanism and the simplest possible control electronics. We have done extensive testing with all three models of the TRS-80, the Apple II, and the Atari 400 and 800. That is why we can guarantee you won't have any interface problems with the Bytewriter-1.

TRS-80 is a trademark of Radio Shack, Div. of Tandy Corp.
Apple II is a trademark of Apple Computer, Inc.
Atari 400 & 800 are trademarks of Atari, Inc.
Bytewriter-1 is a trademark of Microtek, Inc.

BYTEWRITER-1 SPECIFICATIONS

Printing Technology:	7-wire bi-directional impact wire matrix
Printing Speed:	60 lines per minute (80 characters per second) continuous
Character Set:	96 character ASCII (upper and lower case)
Character Size:	10 characters per inch (80 columns per line) plus expanded printing
Paper:	Friction feed (synchronous), accepts single sheet and roll paper up to 9½ inches maximum width. Prints original plus 3 copies.

By the way, our replacement print-head costs less than \$30 too!
Call or write today for more information.

analysis is performed to read back and store the status, track number, and sector number from the 1771. The status can then be examined by the user program to determine if the operation was successful. No registers are saved by any of the routines previously discussed.

Although the hardware design has proven to be very reliable, an error occasionally occurs. Since it would be a great burden for each application to concern itself with error recovery, another program has been provided. Using entry point FDIO, a user program can add the error-recovery function to that provided by FDENT.

After storing all the registers, FDIO calls FDENT to perform the requested operation. Following completion, FDIO examines the status to determine if an error occurred, and, if so, the operation may be retried. Generally, read/write operations will be retried up to five times before assuming a "hard" (ie: nontransient) error.

A nonrecoverable error is indicated with hexadecimal FF in the ERRCODE

COMMAND	TRACK	Variables (all values in hexadecimal)			TEST
		SECTOR	BUFADR	BUFADR + 1	
02	—	—	—	—	RESTORE
1A	20	—	—	—	SEEK
16	10	—	—	—	VERIFY
8C	10	01	00	10	READ

Table 6: Values to be set in variables for testing the controller (with the routine in listing 3). All values are listed in hexadecimal.

variable (see listing 2). This condition generally causes the application program to terminate so the error can be researched. The STATUS variable provides details about the specific problem.

Certain nonrecoverable conditions will not be retried. For example, a *busy* or *device not ready* condition causes an error condition without retry. The program can be altered to increase the sophistication to any level desired. Errors can be cataloged and recorded on another floppy disk to provide a history of all abnormal conditions.

Testing

After completing construction of the controller circuit and verifying the proper timing of the 74123 components, some simple tests can be performed to verify proper operation. These tests can be conducted with the aid of a simple program (listing 3) and table (table 6). Set your monitor to begin execution at INIT. When the break occurs, set the variables as shown for each specific test and allow program execution to continue. This procedure requires you to load the software previously discussed. Initial testing requires a *preformatted* IBM-compatible disk. Examination of the status byte following each test helps diagnose any existing problems.

The restore-drive procedure should generate stepping pulses that move the head to the track 0 position. The head-drive lead screw can be moved manually off the track 0 position to verify proper operation.

Directing the head to seek to a specific track requires the desired track value to be set in the data register of the 1771. This test also loads the head but does not attempt to perform a track verification. This test can be repeated several times with different track values to determine if the 1771 properly seeks in both directions.

If the controller moves the head correctly, the third test performs a track verification. Following the seek movement, the head is loaded, and the 1771 reads the address information recorded on the track to verify that it has located the proper track.

The fourth test attempts to read a specific sector. The data is stored beginning at location hexadecimal

MICROBYTE S-100 BOARDS

Z-80A/I-O \$349.00
Assembled & Tested
Optional Monitor Program \$50.00

- A complete single board Z-80A CPU with serial-parallel interface
- Fully compatible with the proposed IEEE S-100 Bus Standard
- Z-80A CPU (4MHz version of the Z-80)
- 158 instructions—super-set of and upward compatible from the 8080's 78 instructions
- Up to 4K on board EPROM with optional Z-80 monitor program — 16K/7000, 32K/2716 or 4K/2712
- Full vectored interrupt capability — 2 bit with NMI (1 bit)
- 2MHz or 4MHz operation is jumper selectable
- Selectable allow-state insertion for extending M1*, MREQ*, IORQ* and/or on board ROM
- Dual RS-232 serial I/O ports using the Z80A DART with individual baud rate selection from 50-19,200 baud
- Up to 24 bit parallel I/O port—fully programmable Intel 8255A

64K RAM Board
Assembled & Tested Call for Price

MICROBYTE

- Fully S-100 bus compatible
- 64K x 8 bit dynamic RAM
- 16K/2048
- 8VDC @ 700 ma
- 16VDC @ 100 ma
- 16VDC @ 15 ma
- Built-in parity with LED indicator and vector interrupt
- Memory addressable in four 16K banks
- Hidden refresh
- Gold contacts for high reliability
- 72-hour Burn-in
- Memory mapped via DIP switch
- Built-in programmable write protect
- Programmable control port for parity and bank control
- Alpha Micro Corporation

MICROBYTE

- DMA to within 16M byte of memory
- State-of-the-art NEC755 LSI Controller
- IEEE S100 compatible
- DMA arbitration allows use of multiple boards within a system
- PLL data recovery for totally reliable operation
- Write pre-comps switched at mid disc for reliable/dense operation
- Supports up to four drives
- Power On, Power Off or Reset de-selects drives to avoid damaging files
- Drive selected TimeOut: detected drives not in use
- Simpler double sided operation
- Single density/double density operation
- 8" standard drives
- Separate VCC supply for data recovery to eliminate possible noise problems

I/O Board \$289.00
Assembled & Tested
Cables Available (Optional)

MICROBYTE

- Quad RS-232C Serial Ports, One 20mA Current Loop Port
- Fully IEEE S-100 Bus Compatible
- Asynchronous Communications with Z80A DART or Synchronous Communications with Z80A SIO/IM
- Full Set of Modem Control Signals, including RI (Ring Indicator)
- Easily Configurable to Any Type of Terminal Interface
- I/O Servicing Environments: (1) Poled, (2) Bus Vector, (3) Z80 Mode 2 Vector
- On Board Interrupt Daisy Chain Capability
- Special Receive Conditions: (1) Framing Error, (2) Parity Error, (3) Receiver Overrun Error
- Baud Rates Selectable Individually from 50 Baud to 300K Baud
- 72 Hour Burn-in

MAIN/FRAME & DISK DRIVE CABINETS from INTEGRAND

MODEL X5 — Desktop Mainframe — 5 Cards — Small Power Supply \$200
Cabinet size: 9 1/2" w x 15 1/2" d x 7 1/2" h. Cabinet painted dove grey, front panel is black. No optional color! 5-position motherboard, 5 connectors installed, card cage with all guides. Reset switch on front panel. Power switch, 4 DB25 cutouts, 1 BNC mounting hole, 70CFM fan, EMI filter, 6" power cord, line fuse, and clamped flat cable exit on rear panel. P/S power supply (+8@10A, +16@1.5A, -16@1.5A). Power supply is a removable module.

MODEL 7000 — Horizontal Desktop Disk/Cover — 2 Eight Inch Drives — Drives Horizontal \$250
Cabinet size: 20" w x 23" d x 7 1/2" h. Cabinet painted dove grey, front panel is black. Mounting for 2 eight-inch Shugart SA801R Floppy Disk Drives (or mechanical equivalent). Drive mounting brackets supplied. Drives not supplied. 70CFM fan, 6" three-wire line cord, power switch, line fuse, EMI filter and clamped flat cable exit on rear panel. P/S power supply — 5@8A, +24@3A — 6A peak, —5@ 7.5A. All voltages regulated. Power supply is a removable module.

MODEL 8000 — Desktop Main/Frame — 15 Cards — Standard Power Supply \$255
Cabinet size: 17" w x 20 1/2" d x 7 1/2" h. Cabinet painted dove grey, front panel is black (other color schemes optional). 15-position IEEE compatible motherboard (will accept 1801 terminator kit, optional), card cage with all guides. Reset switch on front panel. Power switch, 8 DB25 cutouts, 2 BNC mounting holes, 70CFM fan, EMI filter, 6" power cord, line fuse, and clamped flat cable exit on rear panel. P800 power supply (+8@15A, +16@3A, -16@3A). Power supply is a removable module. Motherboard connectors optional.

MODEL 7000S — Vertical Desktop Disk/Cover — 2 Eight Inch Drives — Drives Vertical \$250
Cabinet size: 13 1/2" w x 23" d x 11" h. Cabinet painted dove grey, front panel is black. Mounting for 2 eight-inch Shugart SA801R Floppy Disk Drives (or mechanical equivalent). Drive mounting brackets supplied. Drives not supplied. 70CFM fan, 6" three-wire line cord, power switch, line fuse, EMI filter and clamped flat cable exit on rear panel. P/S power supply — 5@8A, +24@3A — 6A peak, —5@ 7.5A. All voltages regulated. Power supply is a removable module.

Listing 1: Software to provide fundamental high-level operations for the disk controller (written for the 6502 microprocessor).

Why wait up to 6 months for high quality 16-bit resident system software, when you can get it now?

Hemenway Associates can give you the software tools you need to get the most out of your 16-bit hardware. Because 8086, Z8000 and 68000 Systems Software is sitting on our shelves right now.

Single user operating systems, macro assemblers, text editors, floating point packages, multi-tasking operating systems, linking loaders and PASCAL compilers are all ready for immediate delivery.

You've heard about Hemenway Associates' system designs in the pages of EDN. But now you can have Hemenway-

designed software for your 16-bit microprocessor. Our software is easily adaptable to any hardware configuration. From manufacturers evaluation boards to full-blown microcomputers. It's efficient, easy-to-use and backed by ongoing support.

So whether you're a microcomputer manufacturer, software developer or individual microcomputer owner, Hemenway has the software for you.

For the hard facts on Hemenway software, write or call: Hemenway Associates, 101 Tremont Street, Boston, Massachusetts 02108. Phone: 617-426-1931.

Teach your little Apple big-time electronic mail.

To the average manager, electronic mail means bells, whistles and fans. It means expensive special phone lines. It means a fussy, exotic mainframe that only data processing zealots understand, and only committees of senior corporate vice presidents authorize for acquisition. To top it off, the system is useless for communications outside your own company.

But now there's Micro-Courier.[™] A system that gives you all the electronic mail you'll ever need without draining the corporate treasury, or entangling you in corporate red tape.

All it takes is a trip to your local Apple[™] computer dealer, who can install low-cost Micro-Courier software on any Apple II desktop computer.

The rest of the equipment you already have. Your own phone line. Micro-Courier communicates over standard telephone lines, and it's designed to let you take advantage of late-night transmission rates. While you're home in bed, your Micro-Courier system will send 1,000 words of text in one minute for less than a quarter. A comparable TWX[®] message costs \$4.32.

But text is only the beginning. Because Micro-Courier will electronically mail much more. Charts, graphs, VisiCalc[™] reports and complete programs. Built-in error checking (the kind found on big computers) ensures accurate transmission.

What's more, the system is menu-driven, so it asks for your commands in plain English. It maintains phone lists and sorts messages by individual user. Its documentation is clear and non-technical. And the scope of your network is virtually limitless, because Micro-Courier will exchange information with time-sharing systems and larger computers.

Call our toll-free number today.

MICROCOM

We make little computers talk big.

Even little budgets can now buy big-time electronic mail. Call 800-547-5995, ext. 188, toll-free, for the Micro-Courier-Apple dealer nearest you. *Dealer inquiries invited.*

Microcom, Inc., 89 State Street, Boston, MA 02109. (617) 367-6362

MULTI-USER OASIS HAS THE FEATURES PROS DEMAND. READ WHY.

Computer experts (the pros) usually have big computer experience. That's why when they shop system software for Z80 micros, they look for the big system features they're used to. And that's why they like Multi-User OASIS. You will too.

DATA INTEGRITY: FILE & AUTOMATIC RECORD LOCKING

The biggest challenge for any multi-user system is co-ordinating requests from several users to change the same record at the same time.

Without proper co-ordination, the confusion and problems of inaccurate or even destroyed data can be staggering.

Our File and Automatic Record Locking features solve these problems.

For example: normally all users can view a particular record at the same time. But, if that record is being updated by one user, automatic record locking will deny all other users access to the record until the up-date is completed. So records are always accurate, up-to-date and integrity is assured.

Pros demand file & automatic record locking. OASIS has it.

SYSTEM SECURITY: LOGON, PASSWORD & USER ACCOUNTING

Controlling who gets on your system and what they do once they're on it is the essence of system security.

(THEN COMPARE.)

Without this control, unauthorized users could access your programs and data and do what they like. A frightening prospect isn't it?

And multi-users can multiply the problem.

But with the Logon, Password and Privilege Level features of Multi-User OASIS, a system manager can specify for each user which programs and files may be accessed—and for what purpose.

Security is further enhanced by User Accounting—a feature that lets you keep a history of which user has been logged on, when and for how long.

Pros insist on these security features. OASIS has them.

EFFICIENCY: RE-ENTRANT BASIC

A multi-user system is often not even practical on computers limited to 64K memory.

OASIS Re-entrant BASIC makes it practical.

How?

Because all users use a single run-time BASIC module, to execute their compiled programs, less

memory is needed. Even if you have more than 64K, your pay-off is cost saving and more efficient use of all the memory you have available—because it services more users.

Sound like a pro feature? It is. And OASIS has it.

AND LOTS MORE...

Multi-User OASIS supports as many as 16 terminals and can run in as little as 56K memory. Or, with bank switching, as much as 784K.

Multi-Tasking lets each user run more than one job at the same time.

And there's our BASIC—a compiler, interpreter and debugger all in one.

An OASIS exclusive.

Still more: Editor; Hard & Floppy Disk Support; Keyed (ISAM), Direct & Sequential Files; Mail-Box; Scheduler; Spooler; all from OASIS.

Our documentation is recognized as some of the best, most extensive, in the industry. And, of course, there's plenty of application software.

Put it all together and it's easy to see why the real pros like OASIS. Join them. Send your order today.

OASIS IS AVAILABLE FOR

SYSTEMS: Altos; Compucorp; Cromemco; Delta Products; Digital Group; Digital Microsystems; Dynabyte; Godbout; IBC; Index; Intersystems; North Star; Onyx; SD Systems; TRS 80 Mod II; Vector Graphic; Vorimex.

CONTROLLERS: Bell Controls; Cameo; Corvus; Konan; Micromation; Micropolis; Tarbell; Teletek; Thinkertoys; X Comp.

Write for complete, free Application Software Directory.

Computers Designed for the Professional

Billings Computer Division designs and supports a complete line of computer systems for the professional user which includes an impressive library of professional applications software.

WORD/FORMS PROCESSOR PACK is a screen oriented context editor featuring word underlining, variable line spacing, right margin justification, proportional pitch, block moves, search and replace, column alignment, super- and subscripting, plus many others.

BOOKKEEPER SERIES ACCOUNTING PACK includes Payroll, Accounts Payable, Accounts Receivable, and General Ledger. Easily tailored reports make this a very versatile package designed to meet the needs of a wide variety of businesses.

LEGAL ACCOUNTING PACK is a complete cash accounting system including Fees Manager, Cash Receipts, Statements, and Check Manager. Payroll and General Ledger from Bookkeeper series also are compatible.

INVENTORY MANAGEMENT PACK is a powerful manufacturing inventory package designed to eliminate parts shortages and overstocking. Ordering and expediting reports are generated from a 52-week production schedule. Cost calculations are made for up to 19 different models.

SCREEN ASIST PACK is a program development tool which simplifies the formatting of information on the CRT screen. A special editor allows the creation of a template with protected and unprotected fields.

FORTRAN PACK includes all of the normal features plus special subroutines to allow enhanced file access and manipulation, sorting, use of screen ASIST, and many others. Overlay capability allows development of many programs normally too large for a small computer.

BASIC PACK has both EBasic for fast Basic applications and BBasic for applications requiring capabilities not normally available to Basic users, such as indexed files, structured "if-then-else" statements, Trace debug feature, formatted input and output, and others.

COBOL PACK is an ANSI 1974 version with many level two features plus the same enhancements as the FORTRAN PACK.

32K Board Pictured Above

Why Not the Best?

From The Dynamic RAM Company.

2MHz	4MHz
16K—\$249	\$259
32K—\$375	\$395
48K—\$500	\$530
64K—\$625	\$665

We have now been shipping our 2MHz dynamic RAM boards for over two years. Hundreds of 4MHz boards have been going out every month since early 1979. Our reliability is proven in the thousands of systems which contain our board. Many quality-minded systems houses across the country and overseas are using our boards for their equipment.

Our prices still beat all.

Despite rising 16K memory chip prices (at least from reputable suppliers), Central Data continues to give you the best buy in memory today. Nobody offers a board with a capacity of 64K, assembled, tested, and guaranteed for a full year at the price we do.

Deselect around PROMs. Our boards have the important deselect feature which lets you overlap any fixed memory in your system with no interference.

Our features make the board easily used and expanded. You address our boards on 16K boundaries with mini-jumps (small shorting plugs that slide over wire-wrap pins) near the top of the board for easy access. If you want to expand your board after you have purchased it, all that you need to do is add memory. We can supply you with expansion packages (\$150-2MHz, \$160-4MHz) which include eight RAMs that you can depend on as well as two mini-jumps for addressing. And of course, our board **never** generates wait states.

Low power consumption keeps your computer running cool and reliable. The total power consumption of our 16K board is typically less than 4 watts (+8V @ 300ma, +16V @ 150ma and

—16V @ 20ma). Boards with additional memory typically increase power consumption only 1 watt per 16K!

Standard S-100 Interface. Our board is designed to interface with any standard S-100 CPU. All of the timing of the board is independent of the processor chip, and the board is set up for different processors by changing two plugs on the board.

Call or write us today. That will guarantee a fast response with more information on the board. Or make an order — you'll probably have the board in two weeks! **If you're interested, also ask for a catalog on our Z8000 16-bit processor board designed for the MULTIBUS.** All of these products are available to your local dealer, also.

Central Data Corporation, 713 Edgebrook Drive, PO Box 2530, Station A, Champaign, IL 61820. (217) 359-8010

Central Data

The A2-3D1 Graphics Family...

Now for non-programmers!

professional 3D and 2D graphics for the Apple II

The **A2-3D1** is the graphics utility you can depend on whether you're mapping a town, presenting charts at a business meeting, or animating games.

Now this versatility is available for the non-programmer with the **A2-GE1** graphics editor and programmer. Create images as you view them. Scan them, animate them, combine them, or add text or labels. With a minimum of fuss, you can prepare all sorts of scientific, business, or educational presentations.

Add the **A2-3D2** enhancement package for color, and as a bonus you'll also be able to manipulate images independently of each other—as many different objects at once as your memory will accommodate.

When it's time for some challenging and educational entertainment, run the **A2-3D/A** Saturn Navigator. You'll enjoy an adventurous flight to Saturn, enter its orbit, and rendezvous with an orbital space station that awaits your arrival.

We've reached our goal of giving you the most sophisticated graphics utilities in the marketplace...

see them now at your dealer!

Running on the Apple II:
A2-3D/A Saturn Navigator

A2-3D1 Graphics Package
\$59.95 on disk (32K required)
\$49.95 on cassette (16K required)

A2-3D2 Enhancement
\$24.95 on disk (48K and A2-3D1 required)
\$19.95 on cassette (32K and A2-3D1 required)

A2-GE1 Graphics Editor
\$34.95 on disk (48K and A2-3D1 required)

A2-3D/A Saturn Navigator
\$24.95 on disk (48K and A2-3D1 required)

For direct order, include \$3 for UPS or \$5 for first class mail delivery. Illinois residents add 5% sales tax. Visa and Master Card accepted.

Plug in Pascal Power...

Microengine Power

Plug in PASCAL-100™ new CPU Boardset for S-100 computers. Go with the power of the Pascal Micro-engine! Run UCSD Pascal[®] up to 10 times faster than typical implementations—with twice the memory capacity. You've got the best hardware for the best software around.

On-board Z80

PASCAL-100 includes a Z80[®] processor, so you can run your current software—including CP/M[®]—without modification. Ready to convert an application to Pascal? Do it anytime, with no disruptive hardware changes.

PASCAL-100 comes complete with extensive documentation—our users say it's the best around!

New Generation S-100

PASCAL-100 is designed for the versatile, flexible S-100 bus. Fully compatible with the new IEEE-696 standard, yet works with

most pre-standard boards.

- 16 bit operation
- 128K byte memory capacity, 1 Mega-byte with Extended Memory Map
- Works with 8 or 16 bit memory

Want to know more? Just circle our number on the reader service card. For fast action, call or write us directly.

VIP's customarily need top quality and service within stringent budgetary limits. naturally, they call A.E.I.

Item: A.E.I. tests virtually every* item sold, before shipping.

Item: A.E.I. initializes every piece of software, and makes a copy. If you have a problem, A.E.I. can check to locate the problem by using the in-house duplicate, saving you time.

Item: A.E.I. has in-house expertise on every item offered.

Item: A.E.I. prices are competitive with the lowest, no-service, no in-house expertise dealer.

40% OF ALL A.E.I. SALES ARE TO PUBLIC AND SEMI-PUBLIC INSTITUTIONS.

A partial list** of A.E.I. customers who purchased during the last quarter of 1980 includes: University of Nebraska, Univer-

sity of Virginia, U.S. Dept. of Interior, University of Kentucky, University of California, Massachusetts Institute of Technology, U.S. Air Force, Naval Air Development Center, Brown University, University of Oregon, University of Utah, Ohio State University, University of Southern California, California State Dept. of Water Resources, University of Michigan, and Princeton University.

In the private sector, an equal number of major national organizations purchased during the same period.

You can call A.E.I. too!

VIP's Call A.E.I.

*With our normal fast shipping, we have time to test; expedited shipment may preclude testing.

**A.E.I. does not wish to imply that any of these fine organizations endorse A.E.I., merely that A.E.I. is proud to have them as customers.

IMPOSSIBLE! 32K OF S-100 STATIC RAM FOR \$399 !?!?!?

No, it's not impossible; in fact, we think we've lucked into the S-100 value of the year.

Recently a leading manufacturer of static memory for S-100 systems (we can't say who) received a batch of electrically perfect 32K static RAM boards with some minor cosmetic defects. Intended for sale as Assembled/Tested units, the company got as far as soldering the sockets in place before the problem was discovered. We were in the right place at the right time and bought the entire lot; we're offering these memories in kit form with all components and complete documentation. Simply insert the ICs into the appropriate sockets, solder in a few other parts - and you're up and running. Best of all, you'll have the same reliable, ultra-high speed, fully static, and low power performance you've come to expect from the boards made by this prominent company.

Don't miss out on the memory deal of the year
- these are limited quantity,
first-come-first-served.

TB-4 S-100 EXTENDER BOARD/LOGIC PROBE

\$59 Kit, \$79 Assembled/Tested.

With built-in logic probe for painless troubleshooting, large "kluge" area for building custom circuits or testers, edge connector label that identifies all pins, jumper links in power lines for easy current measurement/fusing, and gold plated connector surfaces for optimized electrical contact. New interlaced ground and signal traces improves performance and reduces noise; even works with the new generation of high clock frequency boards.

If you ever need to examine or fix an S-100 board, the TB-4 is for you.

CONDITIONS OF SALE: VISA®/Mastercard® accepted; call (415) 783-2866. Include \$1.50 for shipping and handling. California residents add tax.

From *Ballet on Broadway* to *Billiards in Dallas...*

... people are finding unique ways to use the Powerful SciTronics REMOTE CONTROLLER

Whether it's the intricate lighting for a Broadway Ballet or the simple remote lighting of pool tables in a Dallas billiards hall, people are finding out SciTronics Remote Controller can meet their needs.

Here's Why:

- ☒ Controls 256 BSR remote switches—not just 16
- ☒ Hardware driven—requires minimum software
- ☒ No ultrasonic link—prevents erratic operation
- ☒ No BSR command module necessary

S-100 CONTROLLER BOARD **\$159.**
 S-100 REAL TIME CLOCK BOARD **\$159.**
 ENCASED CONTROLLER **\$184.**

 ENCASED CONTROLLER & REAL
 TIME CLOCK (TRS-80, Apple II etc) **\$269.**
 APPLE II CLOCK BOARD **\$129.**

SciTronics Inc.

Send check
 or money
 order to: 523 S. Clewell St., P.O. Box 5344
 Bethlehem, PA 18015
 (215) 868-7220

Please list system with which you plan to use
 peripheral. Master Charge and Visa accepted.
 PA residents add sales tax. COD's accepted.

Real Time Clock gives Remote Controller an added dimension!

Real Time Clocks are now available to make your remote controller even more powerful. The RTC feature allows for energy consumption scheduling, event scheduling and much more. Your imagination is your only limitation when it comes to the ways which this RC/RTC combination can be used.

Real Time Clocks feature:

- ☒ Lithium battery back-up
- ☒ Crystal controlled accuracy (.002%)
- ☒ Clock generates interrupts (seconds, minutes, hours) for foreground/background operation
- ☒ Complete software in BASIC to Set and Read clock

ROBOTS

The Future Machines

Intelligent machines are rapidly appearing in homes, automobiles, offices, and factories. Affordable cameras, speech synthesizers, and even robot arms are now on the market. Such advances are giving microcomputers the power to see, hear, grasp objects, and to move around the room. Where can you learn about this technology? In **Robotics Age Magazine**, the journal of intelligent machines.

Robotics Age reports the experience of hobbyists building their own robots, the latest products from industry, and the most powerful techniques from research labs. The face of the world is changing. Join us as we enter the Robotics Age.

YES! I want to stay up-to-date on this fascinating new technology!

Hayden books will help you have fun, save time, save energy, and maybe — even get rich!

MUSICAL APPLICATIONS OF MICROPROCESSORS (Chamberlin) Covers all current electronic and computer music performance techniques as they apply to micro-processors. Features unpublished techniques that are practical with microprocessors. And, signal-processing techniques are presented and applied to the powerful 16-bit microprocessors. **5753-9, \$24.95**

THE JOYS OF MINIS AND MICROS: Data Processing with Small Computers (Stein and Shapiro) Covers technical and management aspects of the use of small computers. Discusses the size of the computer and how to choose the right machine for you. **5156-5, \$9.95**

INTRODUCTION TO VSAM (Atkinson-DeSanctis) Shows the manager and technician working with a COBOL DRIVEN IBM 370 DOS/VS how to convert the files and accessing program of a data base supported by the indexed Sequential Access Method. **#5159-X, \$11.95**

ORDER NOW!

Hayden Book Company, Inc.
50 Essex Street, Rochelle Park, NJ 07662

Please send me the book(s) checked on 15-day FREE examination. At the end of that time, I will send payment, plus postage and handling, or return the book(s) or software and owe nothing. On all prepaid orders, publisher pays postage and handling — same return guarantee. Residents of NJ and CA must add sales tax. Offer good in US only. Payment must accompany orders from PO Box Numbers. Name of individual ordering must be filled in.

HOME COMPUTERS CAN MAKE YOU RICH (Weisbecker) Teaches the home computer owner and non-owner how to make money by consulting, programming, inventing. **5177-8, \$6.50**

BASIC COMPUTER PROGRAMS FOR BUSINESS: Vol. 1 (Stenberg) With more than 35 programs ranging from budgets to accounts payable, each program has a description of its functions, a listing in BASIC, a symbol table and samples. **#5162-X, \$9.95**

BEAT THE ODDS: Microcomputer Simulations Of Casino Games (Sagan) Provides simulations of Trente-et-Quarante, Roulette, Chemin-de-Fer, Craps, and Blackjack, all written in BASIC. **5181-6, \$7.95**

DR. DOBB'S JOURNAL OF COMPUTER CALISTHENICS & ORTHODONTIA: Running Light Without Overbyte Vols. 1, 2, & 3 (The People's Computer Company) Vol. 1 (1976) holds the first ten issues of Dr. Dobb's Journal and reflects the changes that took place in personal computing. Vol. 2 (1977) documents the growth of the small computer as a tool. Vol. 3 (1978) details the new interest in programming languages. **Vol. 1, #5475-0; Vol. 2, #5484-X; Vol. 3, #5490-4; each \$18.95 each.**

HOW TO PROFIT FROM YOUR PERSONAL COMPUTER: Professional, Business, and Home Applications (Lewis) Describes the uses of personal computers in business applications, such as accounting, inventory, mailing lists and others. **5761-X, \$10.75**

PASCAL WITH STYLE: Programming Proverbs (Ledgard, Nagin and Hueras) Helps PASCAL users write more accurate programs with guidelines and samples of programs. **#5124-7, \$7.70**

BASIC COMPUTER PROGRAMS FOR THE HOME (Stenberg) Offers more than 75 programs such as finances, kitchen, automotive, recreational and a listing in BASIC, a symbol table and sample data. **#5154-9, \$9.95**

THE FIRST BOOK OF MICROCOMPUTERS: The Home Computer Owner's Best Friend (Moody) Chapters discuss language, architecture, machine functions, home applications and much more. **#5121-2, \$5.95**

BASIC BASIC: An Introduction to Computer Programming in Basic Language, Second Edition (Coan) Contains more than 100 sample problems complete with results. **#5106-9, \$10.50**

SIXTY CHALLENGING PROBLEMS WITH BASIC SOLUTIONS, Second Edition (Spencer) Contains sixty games, puzzles, mathematical recreations and science and business problems. **#5180-8, \$7.70**

ADVANCED BASIC: Applications And Problems (Coan) A useful book for the programmer acquiring BASIC as a second or third language or a student seeking more about BASIC. **#5855-1, \$10.75**

SMALL COMPUTER SYSTEMS HANDBOOK (Libes) Enables the small computer user to purchase, assemble and interconnect components and program the microcomputer. **#5678-8, \$9.95**

COMPUTERS IN ACTION: How Computers Work, Second Edition (Spencer) Features microprocessors, floppy disks, COM units and languages. **#5757-1, \$7.25**

HOW TO BUILD A COMPUTER-CONTROLLED ROBOT (Loofbourrow) Contains an introduction to the robot and construction of the basic framework, power supply, speed control and directional control circuits. **#5681-8, \$9.75**

THE S-100 BUS HANDBOOK (Bursky) Discusses CPU, memory, input/output, computer fundamentals and more. **#0897-X, \$14.50**

Does timesharing on a small system make sense?

It does with OS-9™ Level One!

Now two (or more) acts can share your microcomputer stage. You will no longer have to walk away from your computer while it is busy running a long program. Because OS-9 is a multitasking operating system, you can be running a BASIC program while editing a PASCAL program, for example. This lets you make more efficient use of your time and your system, even if you only use one terminal. If your application requires multiple, independent terminals, one OS-9 system can do the work of several single-user systems.

The convenience of an advanced operating system

Sophistication does not require complexity. Many OS-9 users say that it is actually easier to use than the older 6800-type operating systems. Consider how easy it is to run multiple programs: to run a program you just type its name and hit 'return.' To run a program as a separate job, you type its name, an '&' character, then hit return. The program runs as usual, but OS-9 comes back immediately and is ready for your next command. Simple commands let you see each program's status, set its priority, or abort it.

The file management system has fast, byte-addressable random-and sequential-access files. The tree-structured multiple directory system lets you create separate disk directories for each user, project, or

application. Command line I/O file redirection means you specify what device and/or files a program will use when you run it, not when you write it.

Efficiency and hardware versatility

No other operating system can run on such a broad range of hardware: the overall RAM requirement for Level One is 32K to 56K RAM. Memory utilization is superlative because OS-9 lets multiple tasks "share" the same reentrant program. For example, if two users run BASIC09, only one "copy" is actually loaded into memory. The Level Two version of OS-9 can utilize up to a megabyte of memory on systems having memory management hardware (both versions come with complete timesharing support).

OS-9's device independent I/O system can handle almost any number and combination of I/O

devices: five or eight inch diskettes, winchester disks, disk cartridges, serial and parallel ports, memory-mapped video displays, and more.

Microware® offers a large selection of "stock" device interface software modules, or you can create your own: all the information you need is in the manuals.

Excellent support and documentation

Each OS-9 package comes with a User's Manual and a System Programmer's Manual that cover every aspect of OS-9. If you have special requirements, you can even purchase the Source Code for most of OS-9 and related software. At Microware® we take pride in offering the best customer support in the business. Technical advice and assistance by phone, mail or telex is available during all business hours.

Superb software tools

In addition to BASIC09, Microware® offers: an Interactive Assembler, Macro Text Editor, Stylograph Word Processor, Interactive Debugger, and coming soon, COBOL, PASCAL and C language compilers.

Microware® software is available for most popular 6809 computer systems. Source listings and yearly maintenance update service are sold separately for most programs.

Please call or write for our free catalog. We accept phone orders and MasterCard and VISA orders.

It's not hard to win . . .

with fast, reliable, mass storage

- The Cameo cartridge disk subsystem provides 40 to 100 times the storage capacity of floppy disks. Data transfer rates and reliability are correspondingly faster.
- Our cartridge feature lets you . . . COPY . . . BACK UP . . . EXTEND . . . or REMOVE your data base easily by just removing the disk pack as you now remove your floppy.
- The densely packed cartridges, although storing five million characters each, are byte-for-byte less expensive than floppy diskettes!
- Available on most 8-bit microprocessors (Apple, Heath, S-100, TRS-80 and others*) with most major operating systems (CPM, APPLE DOS, TRS DOS, OASIS, PASCAL, MPM, SCREEN EDIT and others*).

IF YOU CAN WAIT A MINUTE, WE CAN SAVE YOU \$1,000.

**With the Starwriter™ Daisy
Wheel 25 cps printer from C. Itoh.**

A business letter, written on a 45 cps word-processing printer, might take about two minutes to print.

With the Starwriter, it might take closer to three.

The typical 45 cps printer retails for about \$3,000.

But the Starwriter 25 retails for about \$1,895—thus saving you about \$1,000.

And therein lies the biggest difference between the Starwriter 25 and the more expensive, daisy wheel printers.

The Starwriter 25 comes complete and ready-to-use, requiring no changes in hardware or software. It uses industry-standard ribbon cartridges, and it's "plug-in" compatible to interface with a

wide variety of systems, to help lower system-integration costs.

Using a 96-character wheel, it produces excellent letter-quality printing on three sharp copies with up to 163 columns, and offers the most precise character-placement available, for outstanding print performance.

C. Itoh's warranty;

3 months on parts and labor, supported by one of the best service organizations in the industry.

First SARGON,

And now... REVERSAL

Hayden Games and Gameware

★ **REVERSAL** (Spracklens) Winner of the software division of the First International Man-Machine OTHELLO™ Tournament, this version of the 200 year old game Reversi, features 27 levels of play and high-resolution color graphics and sound. Special "Kibitz" option gives you hints in playing. Written by the authors of SARGON II, the first great computer chess program! **07004, Apple II tape, \$29.95; 07009, Apple II disk, \$34.95.**

★ **BLACKJACK MASTER: A Simulator/Tutor/Game** (Wazaney) A serious game that performs complex simulations and evaluations of playing and betting strategies. **05303, TRS-80 Level II tape, \$24.95; 05308, TRS-80 Disk Version, \$29.95**

★ **SARGON II** (Spracklen) The first great computer chess program! "...an excellent program which will provide a true challenge for many players... Save your money and buy SARGON II..." **'80 Software Critique. 03403, TRS-80 Level II; 03404, Apple II; 03410, OSI C1P; 03440, OSI C4P; each tape \$29.95. 03408, TRS-80 Level II Disk; 03409, Apple II Disk; 03414, PSI C1P Disk; 03444, OSI C4P Disk; 03484, C8P Disk; each \$34.95**

MICROSAIL (Johnson) A true test of your nautical skills as you race against wind, tides, and time. **04401, PET tape, \$11.95**

GRIDIRON: A Microfootball Game (Microflair Associates) Be both offensive and defensive quarterbacks. Includes time-outs, penalties, and the two-point conversion option used in college football. **03003, TRS-80 Level II tape, \$12.95**

MAYDAY (Breitenbach) Out of fuel! Try to avoid crashing with this challenging airplane flight simulation. **02601, PET tape, \$9.95**

STARCLASH (Walton) An exciting game of galactic strategy for one or two players. **05903, TRS-80 Level II tape, \$16.95**

ROYAL FLUSH: Competitive Poker Solitaire (Wazaney) A game you can play alone or with any number of players. High score wins in this poker-based, fun-filled card game. Choose from possible game variations. **07101, PET; 07103, TRS-80 Level II, each tape, \$14.95**

BACKGAMMON (Wazaney) A classic game of skill and luck played against a preprogrammed opponent. **02501, PET; 02503, TRS-80 Level II; each tape, \$10.95**

BATTER UP!!: A Microbaseball Game (Savon) Action-packed baseball with 3 levels of play. **02801, PET; 02803, TRS-80 Level II; each tape, \$10.95**

New from Hayden

★ ★ **HISTO-GRAPH** (Boyd) A calendar-based histogram or bar-graph production system. Allows the user to enter numeric data that relates to a date, and reproduces that data as a high-resolution histogram. **09009, Apple II Disk, \$29.95**

★ ★ **OP-AMP DESIGN** (Gabrielson) Provides the necessary values for your design and will suggest appropriate op-amp types. Includes a choice of six op-amps, and the program will then determine if your selection of an op-amp will be acceptable within your chosen parameters. Can be updated to accommodate future op-amps. **09704, Apple II tape, \$16.95**

★ ★ **DOUBLE PRECISION FLOATING POINT FOR APPLESOFT™** (S-C Software) Extends the accuracy of the arithmetic available on the Apple from nine digits to a full 21-digit precision on all functions in Applesoft compatible format. **09409, Apple II Disk, \$49.95**

★ ★ **DATA-GRAPH** (Boyd) Aids in the preparation of graphs and charts. Numeric data can be entered into Data-Graph and used to create colorful one-, two-, or four-quadrant graphs. **09109, Apple II Disk, \$49.95**

More from Hayden

FINPLAN: A Financial Planning Program for Small Businesses (Montgomery) Allows you to enter data from a balance sheet into the program, to make assumptions about the future growth of business, and to have the computer project results for up to a five year period based on those assumptions. And if you change any data, the program revises all resulting data automatically. The disk version can be used only with TRSDOS Version 2.3. **05103, TRS-80 Level II tape, \$69.95; 05108, TRS-80 Level II Disk Version, \$74.95**

DATA MANAGER: A Data Base Management System and Mailing List (Lutus) Store information on a floppy disk, and retrieve it quickly and easily by specific names, or by category. **04909, Apple II Disk Version, \$49.95.**

PROGRAMMING IN APPLE™ INTEGER BASIC: Self-Teaching Software (Banks & Coan) Teach yourself Apple Integer BASIC and control your own progress at all times with this interactive programmed instruction format. **05004, Apple II, tape, \$29.95; 05009, Apple II Disk Version, \$39.95**

APPLE™ ASSEMBLY LANGUAGE DEVELOPMENT SYSTEM: An Assembler/Editor/Formatter (Lutus) Write and modify your machine language programs quickly and easily. **04609, Apple II Disk Version, \$39.95.**

1000. The status byte indicates if the read operation was successful. If the read test appears good, various other commands should be attempted to increase your familiarity with the 1771 and drive operation.

Extensions

With the addition of an external multiplexing circuit to switch the floppy-disk control lines, multiple drives can be controlled. Multiple drives, however, add a new software-control problem. Since the 1771 re-

tains the current head location, it is necessary to update the track register when switching between drives. A memory variable to contain the head location of each drive can be used to adjust the 1771's register.

A simplified version of the floppy-disk controller can be used to operate 5-inch disk drives in either single- or dual-density. In addition, this disk design is extensible to a more elaborate controller that uses a dedicated 6502 to communicate over a parallel or serial interface to a host computer.

Conclusion

Floppy-disk drives provide sufficient capacity and performance to meet the needs of most microcomputer users. By combining hardware and software, a floppy-disk system can be constructed economically without sacrificing any function or performance. The 6502 microprocessor, with a few hundred bytes of program, can control head movement and data transfer by utilizing the 1771 controller. The software provides a flexible, yet economic, solution to mass-storage problems. ■

THREE COMPUTERS IN ONE!

THE DIGIAC MAPS® CT-80 SYSTEM

Multi-User, Multi-Tasking, Cost Effective.

• 3 business systems can run concurrently - that's 3 times the overall system productivity! • Time share word processing, accounting, order processing, inventory, forms processing, billing & more! • 3 workstations can share data base - preparations can be done by several operators concurrently! • All workstations can share common peripherals. • Uses DIGIAC MAPS-80 operating system. (Digital Research MP/M) • High level language processors including Fortran - Basic - Pascal - Cobol. • Complete Turn-key system for ease of operation & learning!

MICROSTAT NOW AVAILABLE FOR CBASIC2*

MICROSTAT is *the* statistics package for microcomputers, and is proving itself to users around the world, including:

Stanford, Harvard, Johnson & Johnson, Duke, University of Washington, UCLA, Lockheed, University of Pennsylvania, Oklahoma State, U.S. Geological Survey, Monsanto, University of Toronto, Sweden's National Central Bureau of Statistics, Utah State, Butler University, SUNY, Van Camps, Texas A&M, University of Wisconsin

and a growing list of other organizations. MICROSTAT's Data Management Subsystem (DMS) makes creating your own data files easy and includes numerous editing and transformation capabilities. Files produced by DMS can then be used to generate statistics in all common statistical areas (e.g., descriptive statistics, ANOVA, correlation, multiple regression, probability and hypothesis tests, nonparametrics and others) plus some not so common ones. Whether pure research or industrial quality control, MICROSTAT is the statistics package for you.

MICROSTAT sells for \$250.00 and is supplied on 8" SD or 5 1/4" (North Star) disks. The user's manual sells for \$18.00 and includes sample data and printouts. Please specify version when ordering. Foreign inquiries, please write directly to us.

★ LOMAS DATA PRODUCTS PRESENTS ★

IEEE - S100 BUS 64K DYNAMIC RAM

Don't buy an outdated RAM board, buy the LOMAS DATA PRODUCTS 64K RAM board. The LDP 64K RAM is the only board that you can buy today and upgrade to a full 256K bytes on one board. The LDP 64K RAM offers the following advanced features:

- 8202 Dynamic RAM controller
- No waitstates with a 5 MHz 8088 or 8086
- 24 address lines for IEEE 696 compatibility
- Parity for ERROR control in large memory configurations
- 256K upgrade kit available in August
- Meets all IEEE 696 specifications

Introductory price of \$695 until June 15. After June 15 \$795.

LDP72 ADVANCED FLOPPY DISK CONTROLLER

- Meets all IEEE 696 specifications
- Advanced Intel 8272 LSI controller
- Digital data recovery circuit requires no adjustments for reliable operations
- Supports up to 4 drives
- May mix 5" and 8" drives on the same board

HAZITALL

New from LOMAS DATA PRODUCTS, the HAZITALL. The HAZITALL is the perfect companion for your other LDP boards. The board has the following features:

- 2 RS232 Serial Ports, one capable of synchronous data transfer
- 2 8 bit parallel ports
- An 8" 1/4" Winchester Controller port
- A real time interrupt
- A socket for an 8231/9511 or 8232 math processor (math processor optional)
- Meets all IEEE 696 specifications

All these features are available for only \$325 (assembled and tested).

LDP88 CPU BOARD

The LDP88 CPU board offers the 16 bit processor of the future while maintaining compatibility with your present 8 bit boards. The LDP88 offers the following features:

- Meets all IEEE 696 specifications
- 8088 CPU
- RS232 Serial Port
- 9 vectored interrupts
- 1K of RAM
- Up to 8K of ROM/EPROM
- CP/M-86 support

LDPI 8088 MAINFRAME

Why settle for an 8 bit system of the past when you can invest in the 16 bit system of the future. The LDP1 includes the LDP88, LDP72, and the LDP 64K Dynamic RAM board. Options include: a second 8" floppy drive, 2 serial ports, 2 parallel ports, an 8" Winchester drive (Sept. 81).

Ask BYTE

Conducted by Steve Ciarcia

Easy Data Entry?

Dear Steve,

I enjoyed your article "Build a Low-Cost, Remote Data-Entry Terminal." (See the September 1980 BYTE, page 26.) Your idea is close to the type of device I need: a simple data-entry terminal that has a ten-character display and can be used to record data, ten characters at a time, using an audio-cassette recorder. Is there an easy way to use your device for this?

Roy Pittman
Stillwater OK

The remote data-entry terminal described in that article will do some of the things

you want, but not everything. It cannot support more than an 8-bit display without circuit modification. It can, however, easily store and send up to fourteen characters entered sequentially on the keypad (refer to the last paragraph, on page 32 of the article).

Although it is a little involved and requires some extra button pushes to load the characters, the data-entry terminal could be used as you have suggested. To do it, you first press the Control-Escape to enter the storage mode (the remote terminal sends a hexadecimal FA output to the recorder). Decoding the FA code will allow automatic turn-on of the recorder. The

next one to fourteen keys pressed will be stored. They are automatically sent as a single message when a Control-semicolon is typed.

As designed, the data rate is 1200 bps (bits per second). To lower the data rate to something more manageable, say 300 bps, you simply lower the crystal frequency proportionately. To remotely switch a tape recorder on and off, you can use the keyboard function decoder that I described in a previous article. (See "Build a Keyboard Function Decoder," July 1978 BYTE, page 98.) . . . Steve

Backup Supplies

Dear Steve,

Allow me to add another request for backup power supplies. I want to use a computer for Bible translating for tribal people, but our electric power not only blacks out for a few minutes to several days, but when the local welder starts work, the lights dim each time he strikes an arc.

My son had a computer damaged when a copying machine was turned on, so I wonder about the welder. I had decided on a solution similar to the ideas you have mentioned, but I felt that I couldn't design a sine-wave inverter and that a computer probably wouldn't accept the square wave from a Heathkit inverter. How about the motor/generator rigs used by the military for B+ power supplies? A 1974 McMaster-Carr catalog shows that they were available in 24, 28, 32, 63, and 110 VDC input and 250 to 2000 W output at 115 V 60 Hz. Prices ranged from \$200 to \$600.

Of course, this wouldn't be

as efficient as a solid-state inverter, and would need maintenance (since the rigs have brushes) but it might be easier and cheaper to buy equipment on the surplus market.

Also, who publishes Digital Design?

Russell Reed
Pinamalayan, Oriental
Mindoro, Philippines

Motor/generator combinations are definitely a reasonable backup power system. That was all there was before solid-state converters. I cannot speak for the condition of a World War II surplus unit, but if it operates, it can be an economical solution to your problem. In fact, many computer manufacturers (such as Control Data) frequently use motor/generators in their installations. Be careful to monitor the output frequency as well as the voltage when you first start it. The years may have taken their toll on the regulator section.

Digital Design is published by Benwill Publishing Corporation, 1050 Commonwealth Ave, Boston MA 02215. The issue covering uninterruptible power supplies was February 1980 (Volume 10, Number 2). . . . Steve

Bank Switching

Dear Steve,

With the recent price reduction of dynamic memory circuits, a 64 K-byte memory system can be built with 32 devices (at \$96) or 128 devices (for \$64). I read BYTE and other fine publications and I keep coming across an interesting concept called bank switching. What exactly is bank switching? Also, an idea I have is to latch the data at a port bus to provide a

Measure, Control, Document...

Computer Systems and Peripherals designed to coordinate with the Apple Computers that let you measure, monitor, regulate, control and document with laboratory precision, at affordable cost.

AI3 Analog Input System (A/D, 12bits)

Measure voltages with 0.024% precision
Monitor 16 separate inputs under program control
Choose from 8 voltage ranges under program control; 100mV to 10V
Make a reading in 20 microseconds

AI02 Analog Input System (A/D, 8bits)

Measure voltages with 0.4% precision
Monitor 16 separate inputs under program control
Match most sensors with a standard 5 volt range
Signal Conditioning System SC14 available

A003 Analog Output System (D/A, 8 bits)

Control voltage levels from a simple program
Conversion in less than 3 μ sec.
Standard 0 to 10 V Range
Jumpers select 0 to 5V or 5 to 5V
2, 4, or 8 channel models
Each channel has its own memory
Each channel has range, offset adjustments

DI09 Digital Interface

Monitor or control 32 circuits in any combination
Measure time intervals or count pulses
Plug into BCD, parallel, or switch closure instrument outputs

UI16 Isolated Power Interface

Control 110VAC circuits from a program
Operate DC relays or solenoids
Receive logic pulses in noisy environments
Avoid interference and grounding problems in large systems
Start with one circuit — expand to dozens

PR12 Intelligent Printer System

Clear, readable printing on standard paper
Intermix graphics and text of three sizes
A true **printing system** including intelligent interface, and a complete manual.

PL12 Intelligent Plotter System

Produce detailed pen drawings from a program
8 x 10 Plotting surface with .005" resolution
Automatically plot from Basic arrays and strings
A true **plotting system** including intelligent interface and complete manual.

Interactive Structures has been producing laboratory systems and interfaces for Apple Computer since 1977. Our technology is in use in thousands of applications — from our own Spacelab instrumentation system to automobile engine research and woodstove analysis.

Ask BYTE

total address bus of 24 bits. Can I do this?

Simon Chapman
Petaluma CA

Memory is indeed becoming inexpensive these days. Many personal computers will soon contain more than 64 K bytes of memory. To use the extra memory, they must, of course, use bank switching.

A bank of memory is some portion of memory that can be directly addressed by the processor. If you had an Apple II computer with 48 K bytes of memory, all 64 K bytes (including read-only memory) would be in the same bank of memory. Addressing the 64 K requires 16 address bits. If you were to add another 64 K of directly addressable memory, 17 bits would be required. Since the 6502 microprocessor (and the Z80 for that matter) has only 16 address bits, the additional bit must be created under program control.

The typical method is to dedicate a latched output port to this function. To access this second bank of memory, a program in the first bank sets the port output high, simulating the seventeenth address bit. The computer then works exclusively in the second bank. To return to the first bank, a program in the second bank resets the port to a low level.

As you can see, it can get complicated switching back and forth. Mirror images of the operating-system software would have to be resident in both banks. The solution to this problem is to bank-switch memory in 32 K-byte increments rather than 64 K bytes. The typical system would have the first 32 K-byte bank contain the operating system and switch up to eight individual 32 K banks occupying the second 32 K range. Activation of one of the eight boards is

handled by setting a bit on an output port (each bit is a separate memory-bank enable) through the always resident operating system. In most cases, the bank-switching is transparent to the user and takes only a few instructions.

Perhaps as soon as I get some of the new 64 K-byte integrated circuits, I'll discuss this topic in greater depth in an article. . . . Steve

Computer Stores

Dear Steve,

I have a degree in electronics and my fiancée has a degree in business management. We live in a small town and would like to open a computer store, for small businesses, homes, and industry. Where can I get some help and ideas on getting started? There are no computer-related jobs around here, and I feel like I'm being left out.

Bill Bass

Bristol TN

Starting a computer store is a costly and tough job. When you first open a computer store, most personal-computer manufacturers will only ship cash-on-delivery, and many items must be in stock for you to sell them. When hobbyists walk into a computer store, rather than ask if you sell it, most will ask if you have it in stock. Your advantage is not price—mail-order houses are generally much cheaper—so it must be demonstration and availability that sells your products.

Turnover of stock is the key to success. Make sure there is a large enough market in your area before committing to this endeavor, and only believe about a quarter of the people who say they will buy something from you if you open a store.

The best way to get an education on owning a com-

Beneath Apple DOS

A technical manual by Don Worth and Pieter Lechner

Become an expert on the intricacies of Apple's DOS (Disk Operating System). BENEATH APPLE DOS is the perfect companion to Apple's DOS 3.3 Manual. Containing eight chapters, three appendices, a glossary, an index, and over 160 pages, this manual will serve to completely fill in the many gaps left by Apple's DOS 3.3 Manual. Written for Apple users with DOS 3.3, 3.2 or earlier versions, any Apple disk user would welcome having this carefully written manual at his fingertips.

LEARN . . .

- How DOS 3.3 differs from other DOS versions.
- How disks are protected.
- How to reconstruct a damaged diskette CATALOG.
- How tracks are formatted.
- How to use the disk directly, *without* DOS.
- How to call DOS's file manager.
- How every routine in DOS works.
- How to customize DOS to your needs.
- How to overcome DISK I/O ERRORS.
- About the "secret" file types — S and R.

**A DETAILED
LOOK AT DOS**

INCLUDES . . .

- Large quantities of excellent diagrams and tables.
- Source listings of useful disk utilities.
- Glossary of over 150 technical terms.
- Exhaustive description of DOS program logic.
- Handy reference card.
- Useful patches to DOS.
- Many programming examples.

Book - \$19.95

Ask BYTE

puter store is to visit one in another town (make sure it's not close enough to be a competitor) and ask the owner the questions you are posing to me. This is a new field and, unfortunately, there are as many failures as there are successes. Be careful, but don't hesitate to strike out on your own. . . . Steve

Double Characters

Dear Steve,

I would like to acquire a home terminal, since terminal time at school is sometimes difficult to get. Is it possible to build a circuit to connect between the output of a TRS-80 Color Computer or a Videotex and my television or monitor that would double the number of characters per line that these machines display?

The Videotex seemed like the answer to my problems, but I need more than 32 characters to log on to the

system I use.

Eric Lutz
Columbia PA

When you buy a computer, you get what you pay for. The hardware to produce 32 characters is cheaper than that to produce 64. While it's quite possible that some hobbyist will design a circuit to do the conversion you suggest, it hasn't happened yet. Also, I wouldn't buy equipment on the presumption that you can easily redesign it.

As for logging onto a computer, the number of characters displayed on the screen is usually immaterial. The software-terminal program used with the computer should "wrap around" at the end of 32 characters onto the next line (even though you haven't hit the carriage-return key yet). The length of the line you send is entirely determined by when you type a carriage return (after 50, 75, or any number characters).

I wouldn't be especially concerned about a 32-character display given the price/performance ratio of the machine. . . . Steve

Comparing Frequency

Dear Steve,

I am looking for a circuit that compares two input signals and detects which has the greater frequency. The project I am building has a +5 V supply, so it would be handy to use TTL (transistor-transistor logic). Are there single integrated circuits to perform this function?

Marvin Green
Tualatin OR

There are various ways to compare frequencies. The comparison can be either analog or digital. One analog method is to use frequency-to-voltage converters and simple "window" comparators. (This technique is reliable only at lower frequen-

cies.)

Since you mentioned +5 V, you're probably more interested in a digital-frequency comparator. Generally this is accomplished by comparing the phases of the two signals. An integrated circuit specifically designed for this purpose is the Motorola MC4044 Phase Comparator. (Determining $A > B$ or $B > A$ requires additional circuitry.)

If you know the ranges of the frequencies that you wish to compare, often it is easier to compare one unknown to some preset limits. (See figure 1.) Two retriggerable one-shots have their periods set for the upper limit (F_1) and lower limit (F_2) of the capture range. When the unknown frequency (F_0) is applied, it is gated through the remaining circuitry to provide logic outputs such as $F_0 > F_1$, $F_0 > F_2$, $F_0 < F_1$, or $F_0 < F_2$ Steve■

Build a Computer kit that grows
with you, and can expand to 64k
RAM, Microsoft BASIC, Text Edi-
tor/Assembler, Word Processor,
Floppy Disks and more.

EXPLORER/85

Here's the low cost way to learn the fundamentals of computing, the all-important basics you'll need more and more as you advance in computer skills. For just \$129.95 you get the advanced design Explorer/85 motherboard, with all the features you need to learn how to write and use programs. And it can grow into a system that is a match for any personal computer on the market. Look at these features: 8085 Centrol Processing Unit, the microprocessor "heart" of the Explorer/85 (don't the millions who will buy and use the 6800/6805 in a year alone) . . . Four 8-bit parallel 6-bit input/output ports from which you can input and output your programs, as well as control exterior switches, relays, lights, etc. . . a cassette interface that lets you store and reload programs you've learned to write . . . deluxe 2,000 byte operating system/monitor makes it easy to learn computing in several important ways . . . It allows simpler, faster writing and entering of programs . . . It permits access by you to all parts of the system so you can check on the status of any point in the program . . . It allows tracing each program step by step, with provision for displaying all the contents of the CPU (registers, flags, etc.) . . . and it does much more!

You get all this in the starting level (Level A) of the Explorer/85 for only \$129.95. Incredible! To use, just plug in your 8VDC power supply and terminal or keyboard/display— if you don't have them, see our special offers below.

- Level A computer kit (Terminal Version) . . . \$129.95 plus \$3 P&I.*
- Level A kit (Hex Keypad/Display Version) . . . \$129.95 plus \$3 P&I.*

LEVEL B — This "building block" converts the motherboard into a two-slot S100 bus (industry standard) computer. Now you can plug in any of the hundreds of S100 cards available.

- Level B kit . . . \$49.95 plus \$2 P&I.*
- S100 bus connectors (two required) . . . \$4.85 each, postpaid.

LEVEL C — Add still more computing power; this "building block" mounts directly on the motherboard and expands the S100 bus to six slots.

- Level C kit . . . \$39.95 plus \$2 P&I.*
- S100 bus connectors (five required) . . . \$4.85 each, postpaid.

LEVEL D — When you reach the point in learning that requires more memory, we offer two choices: either add 4k of a memory directly on the motherboard, or add 16k of 64k of memory by means of a single S100 card, our famous "JAWS."

Level D kit: (CHECK ONE) . . . □ 4k on-board . . . \$49.95 plus \$2 P&I.* □ 16k S100 "JAWS" . . . \$149.95 plus \$2 P&I.* □ 32k S100 "JAWS" . . . \$199.95 plus \$2 P&I.* □ 48k S100 "JAWS" . . . \$249.95 plus \$2 P&I.* □ 64k S100 "JAWS" . . . \$299.95 plus \$2 P&I.*

LEVEL E — An important "building block" it activates the 8k ROM/EPROM space on the motherboard. Now just plug in one 8k Microsoft BASIC or your own custom programs.

- Level E kit . . . \$5.95 plus 50¢ P&I.*

Microsoft BASIC — It's the language that allows you to talk English to your computer! It is available three ways: 8k cassette version of Microsoft BASIC (requires Level B and 12k of RAM minimum; we suggest a 16k S100 "JAWS" — see above) . . . \$64.95 postpaid.

□ 8k ROM version of Microsoft BASIC (requires Level B & Level E and 4k RAM; just plug into your Level E sockets. We suggest either 4k Level D RAM expansion or a 16k S100 "JAWS" . . . \$69.95 plus \$2 P&I.*

□ Disk version of Microsoft BASIC (requires Level B, 32k of RAM, floppy disk controller, 8" floppy disk drive) . . . \$325 postpaid.

TEXT EDITOR/ASSEMBLER — The editor/assembler is a software tool (a program) designed to simplify the task of writing programs. As your programs become longer and more complex, the assembler can save you many hours of programming time. This software includes an editor program that enters the programs you write, makes changes, and saves the programs on cassettes. The assembler performs the clerical task of translating symbolic code into the computer-readable object code. The editor/assembler program is available either in cassette or a ROM version.

- Editor/Assembler (Cassette version; requires Level "B" and 8k (min.) of RAM — we suggest 16k "JAWS" — see above) . . . \$59.95 plus \$2 P&I.*
- Editor/Assembler (ROM version, supplied on an S100 card; requires Level B and 4k RAM (min.) — we suggest either Level D or 16k "JAWS" . . . \$99.95 plus \$2 P&I.*

8" FLOPPY DISK — A remarkable "building block." Add our 8" floppy disk when you need faster operation, more convenient program storage, perhaps a business application, and access to the literally thousands of programs and program languages available today. You simply plug them into your Explorer/85 disk system — it accepts all IBM formatted CP/M programs.

- 8" Floppy Disk Drive . . . \$49.95 plus \$12 P&I.*
- Floppy Controller Card . . . \$199.95 plus \$2 P&I.*
- Disk Drive Cabinet & Power Supply . . . \$69.95 plus \$3 P&I.*
- Drive Cables (set up for two drives) . . . \$25.00 plus \$1.50 P&I.*

□ CP/M 2.2 Disk Operating System: includes Text Editor/Assembler, dynamic debugger, and other features that give your Explorer/85 access to thousands of existing CP/M-based programs . . . \$150.00 postpaid.

NEED A POWER SUPPLY? Consider our AP-1. It can supply all the power you need for a fully expanded Explorer/85 (note: disk drives have their own power supply). Plus the AP-1 fits neatly into the attractive Explorer steel cabinet (see below).

- AP-1 Power Supply kit (8V @ 5 amps) in deluxe steel cabinet . . . \$39.95 plus \$2 P&I.*

NEED A TERMINAL? We offer you choices: the least expensive one is our Hex Keypad/Display kit that displays the information on a calculator-type screen. The other choice is our ASCII Keyboard/Computer Terminal kit that can be used with either

1. Plug in Netronic's Hex Keypad/Display
2. Add Level B to convert to S100
3. Add 4k RAM
4. Plug in Level E here: accepts Microsoft BASIC or Editor/Assembler in ROM
5. Add two S100 boards
6. Add your own custom circuits (prototyping area)
7. Connect terminal

a CRT monitor or a TV set (if you have an RF modulator).

- Hex Keypad/Display kit . . . \$69.95 plus \$2 P&I.*

- ASCII Keyboard/Computer Terminal kit featuring a full 128 character set, u&l case, full cursor control, 75 ohm video output, convertible to baudot output, selectable baud rate, RS 232-C or 20 ma I/O, 32 or 64 character by 10 line formats . . . \$149.95 plus \$3 P&I.*

- Steel Cabinet for ASCII Keyboard/Terminal . . . \$19.95 plus \$2.50 P&I.*

- RF Modulator kit (allows you to use your TV set as a monitor) . . . \$8.95 postpaid.

- 12" Video Monitor (10MHz bandwidth) . . . \$139.95 plus \$3 P&I.*

- Deluxe Steel Cabinet for the Explorer/85 . . . \$49.95 plus \$3 P&I.*

- Fan for cabinet . . . \$15.00 plus \$1.50 P&I.*

- Steel Cabinet for ASCII Keyboard/Terminal . . . \$19.95 plus \$2.50 P&I.*

- RF Modulator kit (allows you to use your TV set as a monitor) . . . \$8.95 postpaid.

- 12" Video Monitor (10MHz bandwidth) . . . \$139.95 plus \$3 P&I.*

- Deluxe Steel Cabinet for the Explorer/85 . . . \$49.95 plus \$3 P&I.*

- Fan for cabinet . . . \$15.00 plus \$1.50 P&I.*

- Steel Cabinet for ASCII Keyboard/Terminal . . . \$19.95 plus \$2.50 P&I.*

- RF Modulator kit (allows you to use your TV set as a monitor) . . . \$8.95 postpaid.

- 12" Video Monitor (10MHz bandwidth) . . . \$139.95 plus \$3 P&I.*

- Deluxe Steel Cabinet for the Explorer/85 . . . \$49.95 plus \$3 P&I.*

- Fan for cabinet . . . \$15.00 plus \$1.50 P&I.*

- Steel Cabinet for ASCII Keyboard/Terminal . . . \$19.95 plus \$2.50 P&I.*

- RF Modulator kit (allows you to use your TV set as a monitor) . . . \$8.95 postpaid.

- 12" Video Monitor (10MHz bandwidth) . . . \$139.95 plus \$3 P&I.*

- Deluxe Steel Cabinet for the Explorer/85 . . . \$49.95 plus \$3 P&I.*

- Fan for cabinet . . . \$15.00 plus \$1.50 P&I.*

- Steel Cabinet for ASCII Keyboard/Terminal . . . \$19.95 plus \$2.50 P&I.*

- RF Modulator kit (allows you to use your TV set as a monitor) . . . \$8.95 postpaid.

- 12" Video Monitor (10MHz bandwidth) . . . \$139.95 plus \$3 P&I.*

- Deluxe Steel Cabinet for the Explorer/85 . . . \$49.95 plus \$3 P&I.*

- Fan for cabinet . . . \$15.00 plus \$1.50 P&I.*

- Steel Cabinet for ASCII Keyboard/Terminal . . . \$19.95 plus \$2.50 P&I.*

- RF Modulator kit (allows you to use your TV set as a monitor) . . . \$8.95 postpaid.

- 12" Video Monitor (10MHz bandwidth) . . . \$139.95 plus \$3 P&I.*

- Deluxe Steel Cabinet for the Explorer/85 . . . \$49.95 plus \$3 P&I.*

- Fan for cabinet . . . \$15.00 plus \$1.50 P&I.*

- Steel Cabinet for ASCII Keyboard/Terminal . . . \$19.95 plus \$2.50 P&I.*

- RF Modulator kit (allows you to use your TV set as a monitor) . . . \$8.95 postpaid.

- 12" Video Monitor (10MHz bandwidth) . . . \$139.95 plus \$3 P&I.*

- Deluxe Steel Cabinet for the Explorer/85 . . . \$49.95 plus \$3 P&I.*

- Fan for cabinet . . . \$15.00 plus \$1.50 P&I.*

- Steel Cabinet for ASCII Keyboard/Terminal . . . \$19.95 plus \$2.50 P&I.*

- RF Modulator kit (allows you to use your TV set as a monitor) . . . \$8.95 postpaid.

- 12" Video Monitor (10MHz bandwidth) . . . \$139.95 plus \$3 P&I.*

- Deluxe Steel Cabinet for the Explorer/85 . . . \$49.95 plus \$3 P&I.*

- Fan for cabinet . . . \$15.00 plus \$1.50 P&I.*

- Steel Cabinet for ASCII Keyboard/Terminal . . . \$19.95 plus \$2.50 P&I.*

- RF Modulator kit (allows you to use your TV set as a monitor) . . . \$8.95 postpaid.

- 12" Video Monitor (10MHz bandwidth) . . . \$139.95 plus \$3 P&I.*

- Deluxe Steel Cabinet for the Explorer/85 . . . \$49.95 plus \$3 P&I.*

- Fan for cabinet . . . \$15.00 plus \$1.50 P&I.*

- Steel Cabinet for ASCII Keyboard/Terminal . . . \$19.95 plus \$2.50 P&I.*

- RF Modulator kit (allows you to use your TV set as a monitor) . . . \$8.95 postpaid.

- 12" Video Monitor (10MHz bandwidth) . . . \$139.95 plus \$3 P&I.*

- Deluxe Steel Cabinet for the Explorer/85 . . . \$49.95 plus \$3 P&I.*

- Fan for cabinet . . . \$15.00 plus \$1.50 P&I.*

- Steel Cabinet for ASCII Keyboard/Terminal . . . \$19.95 plus \$2.50 P&I.*

- RF Modulator kit (allows you to use your TV set as a monitor) . . . \$8.95 postpaid.

- 12" Video Monitor (10MHz bandwidth) . . . \$139.95 plus \$3 P&I.*

Software Received

This is a list of software packages that have been received by BYTE Publications during the past month. The list is correct to the best of our knowledge, but it is not meant to be a full description of the product or the forms in which the product is available. In particular, some packages may be sold for several machines or in both cassette and floppy-disk format; the product listed here is the version received by BYTE Publications.

This is an all-inclusive list that makes no comment on the quality or usefulness of the software listed. We regret that we cannot review every software package we receive. Instead, this list is meant to be a monthly acknowledgment of these packages and the companies that sent them. All software received is considered to be on loan to BYTE and is returned to the manufacturer after a set period of time. Companies sending software packages should be sure to include the list price of the packages and (where appropriate) the alternate forms in which they are available.

Apple

Address Book, name and address file and telephone dialer for the Apple II. Floppy disk, \$49.95. Muse Software Company, 330 N Charles St, Baltimore MD 21201.

Data Fixer, disk software-repair utility for the Apple II. Floppy disk, \$29.95. Image Computer Products, 615 Academy Dr, Northbrook IL

60062.

Data Plot, on-screen data-graphing program for the Apple II. Floppy disk, \$59.95. Muse Software Company, (see above).

Invasion Force, graphics game for the Apple II. Cassette, \$19.95. Compu-Things, 708 Broadway, Chelsea MA 02150.

Monitor Extender, machine-language utility for the

Apple II. Cassette, \$19.95. Image Computer Products (see above).

Spelling, three educational games for the Apple II. Floppy disk, \$21.95. Software by Witzel, POB 2123, Littleton CO 80161.

Super Bar and Wine Guide, wine selection guide and bar recipe program for the Apple II. Floppy disk, \$24.95. Cine-Aero Productions, 1821 N Frederic St, Burbank CA 91505.

Super Text Form Letter Module, add-on module to Super Text II word-processing package for the Apple II. Floppy disk, \$100. Muse Software Company (see above).

Super Text II, word processor for the Apple II. Floppy disk, \$150. Muse Software Company (see above).

Atari

Shuttle Ascent Simulation, space-shuttle simulation for the Atari 800. Cassette, \$9.95. Starbound Software, POB 214, Cocoa Beach FL 32931.

Commodore

Addition, educational program for the Commodore PET. Cassette, \$20. Teaching Tools, POB 12679, Research Triangle Park NC 27709.

Create-A-Base, data-base management program for the Commodore CBM. Floppy disk, \$360. Micro Computer Industries Ltd, 1520 E Mulberry, Fort Collins CO 80524.

Subtraction, educational program for the Commodore PET. Cassette, \$20. Teaching Tools (see above).

Exidy

Toolkit, screen editor and enhancements for the Exidy Sorcerer. Cassette, \$69.95. North American Software, POB 1173 Station B, Downsview, Ontario, M3H 5V6, Canada.

Sword, word processor for the Exidy Sorcerer. Cassette, \$34.95. North American Software (see above).

Super Graphic Scratch Pad Version 2.2, graphics utilities for the Exidy Sorcerer. Cassette, \$24.95. North American Software (see above).

Radio Shack

Aviation, aviation-calculation package for the TRS-80 Pocket Computer. Cassette, \$24.95. Radio Shack, 1 Tandy Ctr, Fort Worth TX 76102.

Cheaptalk, voice-output routines for the TRS-80 Model I. Cassette, \$19.95. Alan Saville, POB 5190, San Diego CA 92105.

Income Property Analysis System, business-analysis program for the TRS-80 Model I or III. Floppy disk, \$225. Advanced Business Microsystems, 5801 Marvin D Love Fwy, #103, Dallas TX 75237.

LDOS, disk operating system for the TRS-80 Model I. Floppy disk, \$149. Galactic Software Ltd, 11520 N Port Washington Rd, Mequon WI 53092.

Olympic Decathlon, multi-player graphics game for the TRS-80 Model I. Floppy disk, \$24.95. Microsoft Consumer Products, 400 108th Ave NE, Suite 200, Bellevue WA 98004.

RSM Patch, modification package to Small Systems Software's RSM for the TRS-80 Model III. Cassette, \$9.95. Remarkable Software, POB 1192, Muskegon MI 49443.

SECS, full-screen editor for the TRS-80 Color Computer. Cassette, \$29.95. Datsoft Inc, 16600 Schoenborn St, Sepulveda CA 91343.

SIGMON, machine-language monitor for the TRS-80 Color Computer. Cassette, \$29.95. Datsoft Inc (see above). ■

COMPUTER HOBBYIST SPECIALS!

Daisy Wheel Terminals

RS-232, used, off-lease. Features Diablo Hytype 1 printer, up to 30 CPS, plot & text modes, dual pitch and much, much more. Includes data, operation manual, schematics. "As-is" machines may need some service.

Add \$40 for Hdlg. and Pkg.
Pay Shipping When Delivered.

TESTED & FUNCTIONAL "AS-IS" ONLY
NOW ONLY **\$1199⁰⁰** **\$799⁰⁰** ea.

Modified I/O "SELECTRIC*-II" Printer

Stepper driven platen & carrier. Takes Selectric II tape cartridges. Steppers reduce mechanical failure rate. Uses opto-sensors for all feedback and keyboard sensing and solenoids for character selection & functions. Sophisticated design. Rebuild into a typewriter or drive with a micro processor for bi-directional printing & 4-way plotting. Does not include drive circuitry or power supply. Mostly whole. "as-is", no type element included. Includes I/O data & schematics. Fantastic possibilities. Removed from sophisticated word processors.

* Reg. Trademark of IBM Corp.

BYTE's Bits

Terminal Helps Partially Sighted and Legally Blind

Some partially sighted individuals can now work with computer terminals thanks to M Daniel Simkovitz, a partially sighted Wayne State University researcher in electrical engineering. The device, called the Low Vision Terminal System (LVTS), allows people with poor vision to see and read computer output.

The LVTS is a microprocessor-based system that enlarges letters and characters to more than three inches in height. The size of the letters and characters and the speed of their movement are controlled by the user. The display can move horizontally one line at a time or scroll vertically through the

text. Other possible beneficiaries of the LVTS could be secretaries, data acquisition personnel, or anyone accustomed to working with terminals for long periods. By adjusting the height and speed of the characters, eye strain can possibly be reduced.

Dr Edward R Fisher, associate dean for research and graduate programs at the College of Engineering, assisted Mr Simkovitz with the patent process. A US patent is pending in Wayne State University's name. The two are now searching for a manufacturer that will help develop and market the LVTS. For more information, contact Dr Fisher, (313) 577-3861, or Dan Simkovitz, (313) 577-3902, at Wayne State University, Detroit MI 48202. ■

Startrek 4.0 and Startrek 3.5

Scott Mitchell, 346 S Taylor St, Manchester NH 03103

Startrek 3.5 is the descendant of Lance Micklus's Startrek 3.0. It has been revised five times and is thoroughly debugged. It is the most widely distributed Startrek game. At first I thought it was unfair to compare Startrek 4.0 by Jeff Hamilton with Startrek 3.5, but after playing version 4.0, I found features in it that I liked, and many that BYTE readers might prefer.

Startrek 3.5 is a menu-driven program. After each sequence of events, you are returned to a list that has eleven command numbers and one invisible command. From this list, you pick and choose commands as if it were a menu. Commands include control of phasers, photon torpedoes, impulse and warp drives, long- and

short-range sensor scans, and alert status. You can display the ship's current status, call up damage control to see what is or isn't functioning, call for repairs, or have the science computer tell you what objects are in your quadrant. The ship's computer command takes you into a subsystem that scans its data base for data on Klingon warships, starbases, class F stars, planets, unexplored areas, etc. The computer obtains this information each

CAT-100 FULL COLOR GRAPHICS

The original 256-color imaging system with high resolution video FRAME GRABBER for the S-100 bus.

Capture and digitize a video frame in 1/60 of a second. Select the best resolution for your application, from 256 to 1280 pixels per TV line. Display your digitized or computer processed image with 256 gray levels or 256 colors on standard B&W, NTSC or RGB color TV monitors.

Compact two-board basic system

Features:

- Highest possible quality 480x512x8 digital video image presently available on the market
- Input capability from TV camera or other sources
- Variety of synchronization choices
- 2 selectable video A/D conversion circuits
- Choice of 1, 2, 4, 8, 16 or 32 bits per pixel
- 32K-byte image memory on the basic system
- 32, 64, 128 & 256K byte system capacity
- Lightpen Input
- Photographic trigger control Input
- Software selectable system parameters
- Interfaces for TRS-80 and other processors
- Comprehensive line of accessories, monitors and support software

240x256 Digitized image, 16 levels

time you request a sensor scan. The invisible command saves the game on disk or cassette.

Startrek 4.0 is not a menu-driven game; instead it runs in real time. To compare the two, let's say you were battling a Klingon warship and you fired your photon torpedoes and missed. The Klingon fired back and knocked out your science computer. At this point, 3.5 returns to the menu and waits for you to enter your next move. On the other hand, in version 4.0, you must think and act quickly because situations occur as in real-time events. For example, a Klingon can wander into your quadrant, spot and fire at you, and leave you dangling in space while you slipped out for a snack. Ship repairs also go on in real time. In general, Jeff Hamilton's Startrek 4.0 has the same commands as Startrek 3.5, but they are displayed in a small window on your control console as you enter them.

Startrek 3.5 has extensive and reasonably quick graphics. Sounds have been added to the game, but they are kept simple so as not to become tiring after many hours of play. Startrek 4.0 doesn't have sound and uses rather simple graphics. The screen accurately demonstrates what is happening, and it shakes wildly when you are hit.

The objective of 4.0 is to destroy all the Klingons within thirty-two stardates, while stopping at a starbase only twice. The objective of 3.5 is to destroy twenty Klingons by a certain stardate, but the game does not end there. You must also explore and collect as much data as you can about an entire region, and you must locate and orbit

all class M planets. As you're doing that, you must cope with pulsars, black holes, and, of course, the crafty Klingons. When you have destroyed twenty Klingons and feel you have collected enough data, you dock at a starbase, where Starfleet Command rates your performance on a scale of 1 to 100%.

Startrek 3.5 has a three-dimensional universe (8 by 8 by 3) with 192 quadrants; a quadrant has 64 (8 by 8) sectors. Startrek 4.0 has a two-dimensional universe (8 by 8) with 64 quadrants. Again, each quadrant has 64 (8 by 8) sectors.

In Startrek 4.0, the computer can be used to help you figure out the exact coordinates to fire photon torpedoes or to navigate the ship. This helps your accuracy when you first start playing the game. Klingon warships using a cloaking device that makes them seem invisible are an extra problem in version 4.0, because they are immune to the photon torpedoes when in this state. In 4.0, but not in 3.5, if a star is in your path, you must navigate around it. In version 3.5, you must be true to your Starfleet orders, and never destroy a planet, star, or starbase, or the game ends immediately. The Klingons can maneuver out of the way of photon torpedoes and phaser fire.

Conclusions

While Startrek 3.5 is my personal favorite, Startrek 4.0 has an interesting angle to it. To some, the real-time aspect of 4.0 may make all the difference, but, all in all, both games are smooth-running and well debugged. ■

MEGABYTER

ZVX4 FOUR TIMES THE BYTE

The ZVX4 MEGABYTER is for the APPLE II user who wants to DOUBLE file size, expand the capability of existing business software, and make other SERIOUS applications more viable.

Now you can have compatibility with IBM, INTEL, CP/M*, Z80 Softcard*, UCSD Pascal, and others.

Look what the MEGABYTER dual density 8" floppy disk controller, with its LSI circuitry and reliable industry standard IBM 3740 format, means to you:

INCREASED STORAGE

- Increase online storage to 2 Mega bytes
- Double your maximum accounts and file size
- Add high capacity efficient hard disk backup
- Control up to 4 Shugart SA800/SA850 drives

IMPROVED COMPATIBILITY

- Operate APPLE DOS 3.1/3.2/3.3, mini disks
- Preserve existing software investment
- Interchange data with other computers

SIMPLIFIED OPERATION

- Reduce disk handling and I/O slot usage
- Gain automatic single/double density operation
- Change to double sided drives with one switch

Available at your Apple dealer. Call or write today!!

The BDS C Compiler

Christopher Kern, 201 I St SW, Apt 839
Washington DC 20024

The ubiquitous Pascal compiler has joined the ubiquitous BASIC interpreter as a staple of the microcomputer programming environment, bringing with it the concepts of hierarchical program design, orderly program development, and legibility that generally fall together under the heading "structured programming."

But for those who are not ideologically committed to the proposition that Pascal is the most congenial programming language—and who have access to an 8080-based computer and the CP/M operating system—I would like to suggest an alternative: a language created at Bell Laboratories, named, with characteristic concision, C. C provides the same structured programming approach as Pascal, but it has a cleaner and crisper syntax, one that

is both closer to the ultimate machine language of the computer and, paradoxically, somewhat easier to become familiar with than Pascal.

My recommendation is largely a product of my experience with one of the best and least expensive programming language packages I have come across: the C compiler developed by BD Software (by Leor Zolman of Cambridge, Massachusetts). I have been using the BDS C compiler for over a year, and I think many hobbyists who aren't already using a modern, high-level language could easily switch to C from their BASIC interpreter. C, like BASIC, can be learned quickly, but it has resources that BASIC, even in its ingeniously extended forms, can't match. And while the BDS C compiler does not provide as convenient a programming environment as BASIC—no compiled language really can—it comes about as close as possible to eliminating the worst annoyance of many compilers running on microcomputer systems: the long wait between idea and execution as the compiler cranks out an assembly-language file that must itself be compiled (run through an assembler) before the object program can be tested.

The operation of the compiler is relatively straightforward and quite fast. The command "CC1 filename.C" reads in the source program (which has been prepared using the host system's editing facilities and saved as a file on disk), parses it, and leaves the resultant intermediate file in memory. As CC1 goes out of business, it calls in another program, CC2, as an overlay (ie: it takes the place of the previous program). CC2 is the code generator: it saves the C machine-code program on disk in a special relocatable format. The relocatable machine-code program is turned into executable, absolute machine code by the linker, CLINK, which also merges the user's program with previously compiled program files (such as the standard C function library) if necessary. The entire source file is read into memory before compilation begins, but because it is possible to link separately compiled modules together, the available memory space of the computer does not limit source-program size. If the source code is too long to fit into the available memory at

Boards for S-100 BUS from S.C. Digital

"CPU-Z80"

Advanced Z80A based CPU board
\$219 Assembled and Tested
\$149 Kit *(less Interrupt)

Features: Model CPU-Z80

- 2/4 Mhz SW selectable.
- Built in 8 Prioritized Vectored Interrupts with 8 possible levels of Nested Interrupts using powerful Mode 2 of Z80, all done in Hardware, expandable with external ckt.
- Vector Jump on RESET, in 4K increments.
- Supports 2K of EPROM (not supplied), DMA, dynamic RAM refresh . . . many more.

*Kit comes with all parts except chips connected to Interrupts.

"INTERFACE: 1" I/O, Memory Interface Board

\$229 A & T
\$209 A & T, Without Cassette Interface
\$154 Kit, Without Cassette Interface
\$ 15 Parts For Cassette Interface

Features: Model 3SPC

- 3 Serial w RS232C or 20ma Current Loop, 1 Parallel.
- 4K of EPROM/ROM and 4K of RAM (ROM/RAM not supplied).
- Built in Kansas City Standard Cassette interface usable to 1200 Baud.
- Generates all popular baud rates up to 19.2K baud, including 110 & 134.5.
- SW settable Address, Baud Rates, Ports.
- CTS (Clear to Send) Displayed as a status bit on CH 3.

"UNISELECT" 16K Static RAM with universal Bank Select, 200 ns mem chips.
Model 16KUS \$235 A & T \$209 Kit \$ 38 Bare Board, Documentations

All boards meet IEEE-S100 standards. Fully socketed, solder masks, gold contacts, and guaranteed for one full year. Kit guaranteed parts, only.

Delivery: from stock to 72 hours. **Ordering:** You may call for M.C., Visa or C.O.D. orders. (Add \$4.00 for C.O.D.) Personal checks o.k., but M.O. speeds shipment. Takes 7 to 15 days to clear personal checks before shipping.

Undamaged boards can be returned within 10 days for full refunds. Illinois residents add 5 1/4% sales tax.

one time, it can simply be divided up and compiled in pieces. The use of a separate linker also makes it possible to create libraries of compiled functions (such as the C standard library, which supplies a number of basic input/output and utility functions in every system that supports the C language) that can be used in the future as, essentially, part of the language itself.

The manual states that the parser (CC1) operates at about twenty lines of source code per second and that the code generator (CC2) runs at about seventy lines of source per second. In practice—at least on floppy-disk-based systems—the main limitation on compilation speed is the speed of disk input and output. On very long programs, there may be a wait of perhaps a minute while

CC1 crunches away. Obviously this can be shortened considerably by compiling only the part of the program that is being worked on and linking it with other, previously compiled, routines. Even with relatively long programs that are compiled as a unit, however, I did not find the delay in compilation to be objectionably long.

For most users, the speed at which a compiled program runs, not the length of time required to compile it, is what really matters. I am reluctant to express this in terms of a benchmark, since the proposed benchmarks I have seen (1) require assumptions about the type of program that will be compiled that cannot hold from one user to the next; (2) can be properly compared only between systems that have both the same processor throughput and the

A Comparison of C and Pascal

C programs and Pascal programs look quite a bit alike. They should—the two languages have a lot in common, including sets of similar primitive operations that make direct Pascal-to-C or C-to-Pascal translation feasible. Yet enough differences exist to give the two languages a distinctly different "feel."

The most visible difference is block structure; C programs do not have the true block structure found in Pascal programs. A C program is a collection of separate functions; thus one function cannot be nested within another and called as a separate entity. C functions may contain blocks of code that are either executed completely or not at all, but they are not named as functions themselves, and they must be included in-line as part of the normal program flow within the function.

C uses only functions, where Pascal distinguishes between functions and procedures. In practice, the only real difference is that any C function can return a value to its calling routine. This is but one example of C's relaxed programming philosophy. Other examples include the ability to assign freely between integers and characters, and between pointers and unsigned integers, the latter providing virtually unlimited opportunity to perform address arithmetic within the host system's available memory space. There are times when this flexibility is very convenient, but there is a price: the compiler won't prevent a foolish move if the programmer insists on it. Whereas Pascal takes a very rigid, protective, and rather mathematical attitude toward program construction, C allows the programmer a certain amount of freedom. This makes sense: Pascal was designed as a teaching language, and C is a production programming language that allows the programmer to do things that he may want to do, at the expense of some conceptual niceties.

Both C and Pascal allow parameters to be passed to subroutines by value and by reference. This means that the called subroutine can receive either its own local copy of a parameter (which it can alter at will without changing the value of the variable as far as the calling routine is concerned), or a reference to the calling routine's variable (which can be subsequently altered by the subroutine that has been called).

Each language also provides pointers—variables that point to memory locations, such as the beginnings of arrays. In

Pascal, pointers tend to be used sparingly, while in C they are much more common. Here again, C is unwilling to protect the programmer from himself. Pointers are risky. If they are misused, they can point somewhere entirely unexpected and clobber an innocent piece of unrelated code with predictably disastrous results. They can, however, make for extremely efficient programs, and C encourages their use.

C has been described as a relatively low-level language. It generally operates on the same primitive data objects as the computer itself, and it does not provide certain composite operations. For example, a string in C is a series of characters beginning at a given memory location, not a discrete entity that can be passed or assigned as a unit. Explicit functions are used to provide more sophisticated facilities for manipulating data objects, as well as for input and output. The more common primitive operations are provided in the C standard function library. Others must be written by the programmer.

One of C's most distinctive features is its unusual—and unusually concise—set of operators. C has multiple assignment operators that lead to expressions of the form $x += 1$ or $y >>= 4$. These mean, respectively, "let x equal x plus one" and "let y equal y logically shifted right 4 bits." Another unique C concision is the $?:$ (if... then) operator. It is used in expressions of the form $y = x > 0 ? 1 : 0$. This means "if x is greater than 0 let $y=1$; otherwise, let $y=0$."

BASIC exists in thousands of dialects. The same diffusion seems to be taking place—to a lesser extent, fortunately—with Pascal. Thus far, not many compilers operate on variations of C, so true portability between computers still exists. I know of three microcomputer C compilers: the BDS compiler (which implements a very complete subset of the language); one for a considerably more restricted (and slightly archaic) subset of C that was published, in C source code, in the May 1980 issue of Dr Dobb's Journal of Computer Calisthenics and Orthodontia (this compiler is available from Walt Bilofsky, 14478 Glorietta Dr, Sherman Oaks CA 91423, in CP/M and Heath HDOS formats); and Whitesmiths' C Compiler, which provides the full C language for various 8080-family and DEC LSI-11 systems (Whitesmiths Ltd, POB 1132, Ansonia Sta, New York NY 10023). An excellent C-like interpreter is available from tiny-c associates, POB 269, Holmdel NJ 07733 (see my review of tiny-c: "A User's Look at tiny-c," December 1979 BYTE, page 196). A tiny-c compiler is also available.

same disk-access speed, and (3) are of dubious value when used to compare different programming languages because it is unlikely that the benchmark programs will be of equivalent efficiency in all languages.

Having said all that, I will venture the opinion (acknowledging that it may be even more misleading than a benchmark program) that programs compiled on the BDS compiler run very fast indeed. Not as fast as those coded in assembler, obviously, but much faster than any BASIC interpreter, considerably faster than any pseudo-code Pascal system (a technique that amounts to semi-compilation, with object code being generated for a "pseudo-machine" that is emulated by the host computer), and *about as fast* as those created by any microcomputer compiler I have seen. I have used BDS C to compile a rudimentary LISP interpreter, and while it's no match for a machine-coded LISP, the project demonstrated to my satisfaction that the BDS compiler is suitable for system-programming purposes.

BDS C is a true subset of the standard C language. Very little is left out. The most serious omissions are the lack of static variables and initializers. Several library functions are supplied to remedy the latter, although initialization remains somewhat more awkward than in standard C. Also absent are floating-point real numbers and long (32-bit) integers. A series of subroutines to perform floating-point conversions and arithmetic is sup-

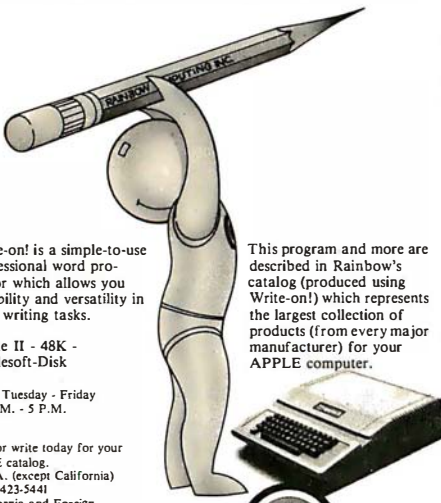

plied with the package, but this is not as convenient a way to provide real numbers as building them into the language the compiler accepts directly.

A considerable amount of work has been done to relieve the programmer of some of the more tedious aspects of the CP/M operating system. Library functions permit the use of the standard CP/M carriage-return/line-feed sequence to terminate a line or, at the user's option, the single newline character that is standard in other C programming environments. Buffered file routines are supplied as part of the standard library, which permits the programmer to write data to disk a character at a time instead of in blocks of 128 characters, as required by CP/M. Dynamic storage allocation and deallocation are also provided, so the user can create and dismantle complex data structures at run-time, and therefore reuse the memory area allocated to them (even though CP/M itself contains no allocation mechanism).

It's a shame the BDS compiler doesn't go one step further and provide redirected input and output; this would have permitted the user to write a program using a single I/O stream and then specify at run-time whether the program was to communicate with the console, a modem, a disk file, etc. Some high-level language compilers provide a debugging option that allows the user to trace program execution and print out variable values. Alas, BDS C is not one of them. Short of that, the best debugging tool I

INTRODUCING
COGNIVOX Series VIO-1000
A Revolutionary New
Voice Input and Output Peripheral

High Fidelity Voice Response
Industrial Quality Recognition

PET — AIM-65 — APPLE II

COGNIVOX series VIO-1000 is a top-of-the-line voice I/O peripheral for business and educational applications and the demanding hobbyist.

It can be trained to recognize words or short phrases drawn from a vocabulary of 32 entries chosen by the user. It will talk back with up to 32 words or short phrases. In disk based systems, response vocabularies can be stored on the disk and brought to memory as needed, giving an effectively unlimited number of vocabulary entries. The quality of voice response is excellent, and it is far superior to that of speech synthesizers.

COGNIVOX series 1000 comes complete and ready to plug into your computer (the computer must have at least 16K of RAM). It connects to the parallel I/O port of the PET, to the game paddle connector on the Apple and to the J1 port on the AIM-65. Connectors are included as required. Also included are a microphone, cassette with software and extensive user manual. A built-in speaker/amplifier is provided as well as a jack for connecting an external speaker or amplifier.

Software supplied with COGNIVOX includes two voice operated, talking video games, VOTH and VOICETRIP. These games are absolutely captivating to play, and the only voice operated talking games that are commercially available.

Adding voice I/O to your own programs is very simple. A single statement in BASIC is all that is required to say or to recognize a word. Complete instructions on how to do it are provided in the manual.

In keeping with the VOICETEK tradition of high performance at affordable price, we have priced COGNIVOX series 1000 at the unbelievably low, introductory price of \$249 (plus \$5 shipping in the US, CA add 6% tax. Foreign orders welcome, add 10% for handling and shipping via AIR MAIL). When ordering, please give the make and model of your computer, the amount of RAM and whether you have disks or not.

In addition to COGNIVOX series VIO-1000, VOICETEK manufactures a complete line of voice I/O peripherals for most of the popular personal computers. Speech recognition-only peripherals are available for the 8K PET and the 4K AIM.

For more information call us at 805-685-1854 or write at the address below.

Dealer Inquiries invited.

MOUNTAIN VIEW PRESS
PO BOX 4656
Mt. View, CA 94040

have found comes right out of the C standard library. It is the function "printf", which allows various data objects to be printed in appropriate formats and number bases while the program is being run.

The compiler accepts a number of optional directives that allow the user to:

- Place the generated code in any memory location (including read-only memory, as long as some program-mable memory will be available somewhere in the target system)
- Optimize the object code for speed (which increases the amount of code generated) or for size (which slows the object program down a bit), and to control the way the compiler allocates space
- Save an intermediate file on disk between the two compiler phases
- Display the source text on the user's console during compilation

The linker also supports a number of useful options, including several that permit the programmer to create overlay segments that use the same data elements. This feature is not commonly available in microcomputer compilers for high-level languages.

The assembly-language source code for the run-time package is also supplied (the run-time routines contain

the interface to the CP/M operating system). This permits the user to create a customized run-time package that allows BDS C programs to run under other 8080 operating systems. Those who sell application programs will, no doubt, be happy to learn that there are no royalty requirements for programs that include the run-time package in either its original or customized form.

In addition to the compiler and the linker, the BDS C package contains a librarian program, CLIB (used to manipulate compiled function libraries), the C standard library along with some useful extensions for the microcomputer (and specifically the CP/M) environment, and a collection of sample programs that is of more than passing interest.

The precise sample programs that are delivered with any package may vary, but the copy of BDS C Version 1.4 that I received from Lifeboat Associates in New York contained a fairly sophisticated telecommunications program for connecting a microcomputer system through a modem to another microcomputer (or a time-sharing system), several impressive games (some requiring a cursor-addressable video terminal), and several utility programs, including two that permit the compiler to be used from terminals that generate uppercase characters only. The package also includes a lucidly written manual for the compiler and a copy of the outstanding C language manual, *The C Programming Language*, by Brian W Kernighan and Dennis M Ritchie. ■

REFORMATTER™

opens new files!

© MicroTech Exports 1980

With **REFORMATTER** disk utilities you can read and write IBM 3740 and DEC RT-11 single density formatted diskettes on your CP/M® system.

REFORMATTER enables you to access large system databases, improve data exchange with other organizations, increase program development capabilities, and use your micro in distributed processing.

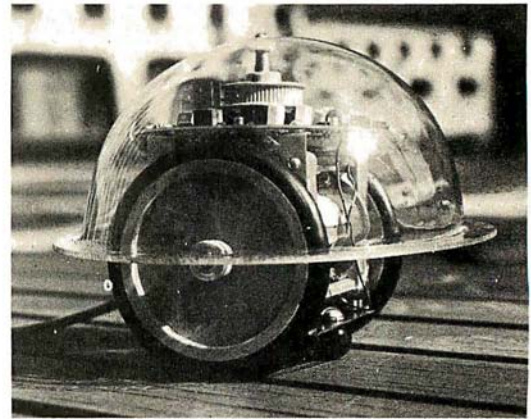

REFORMATTER programs feature bi-directional data transfer and full directory manipulation. ASCII/EBCDIC conversion provided with CP/M ↔ IBM. *MP/M is now fully supported.*

Program Data Sheets, Application Guides, and Machine Compatibility Guides available.

Each program \$195.00 from stock. Specify CP/M ↔ IBM or CP/M ↔ DEC. Order from MicroTech Exports, Inc., 467 Hamilton Ave., Suite 2, Palo Alto, CA 94301 ☐ Tel: 415/324-9114 ☐ TWX: 910-370-7457 MUH-AJTOS ☐ Dealer and OEM discounts available.

Book Reviews

Musical Applications of Microprocessors

by Hal Chamberlin
Hayden Book Company, Inc
Rochelle Park, NJ
1980, 661 pages, hard-cover \$24.95

Reviewed by
Dick Moberg
404 S Quince St
Philadelphia PA 19147

This book is the culmination of many years of experimentation by one of the leaders in the field of computer music for small systems. Its depth of coverage and usefulness are unsurpassed by any other single publication.

A review cannot start without first looking at the book's author. Hal Chamberlin has been involved with microcomputers since their origin. His newsletter, *The Computer Hobbyist*, pioneered construction articles on tape, disk, and graphic interfaces long before there were any books or major publications on the subject. Combining his music and computer talents eventually led him to form a company, Micro Technology Unlimited, and to receive an award for his contributions at the 1979 Personal Computer Arts Festival. He is an avid writer for personal-computer magazines. His clear and often humorous style is prevalent throughout his book.

Before we look at the contents, let's discuss the book's intended audience. Being a long-time computer hobbyist with several years of childhood music lessons, I would target this book for the computer tinkerer or the musician with some syn-

CUSTOM SOFTWARE FROM TCS

Model I & III Programs
for the Epson MX-80 Printer

You get 6 programs for one low price. A library on disk or tape of programs and subroutines designed for gaining maximum use of the Epson MX-80 printer.

BIULET/MAS—Produce large graphic letters and dump them to the printer/screen/disk. Works from any Basic program.
EPSON/SUB—Subroutine to easily use all of the EPSON printer commands. Merge into any Basic program.
OSFATE/EUB—Collection of pre-defined commands accessible from any Basic program. Auto line centering, titles with borders, etc. instantly with one word commands.

DEM/IAS—Tutorial program with 100's of REM remarks to guide you thru the use of your computer.

JXL PATCH—A patch to NEWDOS 2.1/80's jxl screen printer function to print graphics from screen in the Regular Epson printer mode.

ARTICLE—Complete article on many printer possibilities plus new ideas, concepts, & trouble shooting tips.

Model I or III, Tape or Disk

\$39.95 for all 6 programs

\$29.95 if purchased with Epson printer

The DOS Disk Library of Programs

A library of 5 programs for NEWDOS 2.1, TRSDOS (Model I & III).

DIMMAINT—A super directory-maintenance program. Purge, copy,

rename, re-format, etc., quickly with minimum typing. Super graphic displays for easy use.

FILEMAINT—Creates master directory of all files on your library of diskettes. Master file is handled on disk, not on memory, for maximum speed. Access any file in 2 seconds. 40K supports 200 diskettes. 32K about 100. Takes less than 1 hour to run 100 diskettes thru system.

CHARMBL/BAE—A super charming file creation editor & assembler for NEWDOS 2.1. Very fast, easy to use. Reads and edits existing files. **HOMEMAIL**—Unique home mailing list that stores data by modifying program itself. Fast & efficient for home use with less than 100 names.

QASFILE—Maintains excellent records of auto gas use & complete reports on MPG, etc. Also provides car maintenance alerts.

Model I or III Disk \$39.95 for all 5 programs

Infinite Basic Diskette

A diskette of programs written in RACET's Infinite Basic. User must have Infinite Basic (both modules). Extremely useful program with REM remarks to guide you in easy use of the 100 extra commands provided by this software system.

Included on the disk is a program to maintain a Video Cassette Library, an in-memory Mailing List, a demonstration of Matrix Techniques & an equation solution, a screen input system routine. Also a complete article on Infinite Basic with valuable information on commands that are glossed over in the original documentation.

Model I or III Disk only \$39.95

DIABLO

630

The Diablo Model 630 is a reliable, high quality, full-character serial printer for anyone who is seeking superior print quality at a low cost. This is the first Diablo printer to offer complete interchangeability between metal and plastic print wheels. And the sophisticated and discerning user does not sacrifice print quality to obtain this versatility. Every aspect of the Diablo 630 design has been focused on maintaining outstanding print quality. Terminals also have self-test, extensive internal diagnostics and automatic bidirectional printing.

Book Review

thesizer knowledge. The non-musician will find the introductory parts on waveforms and music theory sufficient for understanding the rest of the book. The musician with no background in computing or electronics should have available some of the excellent paperback volumes now available on op (operational) amps, TTL (transistor-transistor logic) circuits, and microcomputers. But, even for the computer-musician novice, this is a book that is readily understandable.

Musical Applications of Microprocessors is divided into three sections: "Background," "Computer-Controlled Analog Synthesis," and "Digital Synthesis and Sound Modification."

Section I covers background material in music synthesis and microprocessors. The first chapter, "Music Synthesis Principles," starts with a discussion on the goals of music making, comparing conventional instruments with electronic-synthesis techniques. It emphasizes that with electronic synthesis, a musician is limited only by his imagination as to the accuracy, complexity, and variety of sounds that can be achieved with this medium. Next, the author discusses the relationship of the physical parameters of waveforms — frequency, amplitude, and harmonics — to the musical concepts of pitch, loudness, and timbre. The chapter ends with a history of electronic sound synthesis from the teleharmonium to the microprocessor.

Chapter 2 presents the terminology and techniques of sound modification. It starts with a section on tape-recording techniques (re-arranging tape splices, speed transposition, etc) and then compares these to their electronic counterparts. Other electronic techniques such as

filtering, spectrum shifting, reverberation, and chorus synthesis are discussed. The chapter concludes with a discussion on analyzing natural sounds for subsequent modification.

The next chapter, on voltage-control methods, explains the conventional techniques of using voltage to control frequency, amplitude, and harmonics. Each of these techniques is later explained in regard to its implementation with analog and digital circuits or by using software programming. The modular nature of conventional synthesizers is also discussed.

Chapter 4 addresses waveform synthesis by the computer by digital-to-analog conversion and looks at the advantages and limitations of using this method. Music-programming systems and languages, including MUSIC V and Hal's NOTRAN (NOte TRANslation language), are briefly described.

The background section concludes with a chapter on microprocessors. There is an interesting comparison between the 8080, LSI-11, and 6502 microprocessors showing where each (and similar processors) should be used in the grand scheme of a music-synthesis system. The author claims that the 8-bit 8080/Z80 family are the optimal microprocessors for synthesizer control, the 16-bit LSI-11 for direct microprocessor synthesis of music, and the 8-bit 6502 for replacing dedicated logic. Although the choice of processor will vary from one designer to the next, this section gives the design criteria and the desired microprocessor parameters for each area of application.

The remaining two sections of the book offer technical how-to information regarding microcomputers in music synthesis. There's a discussion on the use of a

DISK DOCTOR

for CP/M

A Program to Recover "Crashed" Discettes AUTOMATICALLY!

Maybe it was a lightning storm, static from the rug, or just too late at night to be working. Whatever the cause, when a discette "crashes" and valuable data or programs are destroyed, the loss is enormous, both in time and money.

DISK DOCTOR is a program which automatically recovers bad discettes. Best of all DISK DOCTOR does not require any knowledge of CP/M file structure! If you can operate CP/M, then you can use DISK DOCTOR. The entire system is menu driven with key information displayed.

DISK DOCTOR is comprised of five "wards", each capable of performing a specific discette recovery operation.

- **Ward A:** Verifies discettes and locks out bad sectors without touching the good files that remain.
- **Ward B:** Copies whatever can be read from a "crashed" file and places it into a good file under user control.
- **Ward C:** Copies discettes without stopping for bad sectors. Bad sectors are replaced by spaces.
- **Ward D:** "Un-erases" files. That is, Ward D will recover accidentally erased disk files.
- **Ward E:** Displays directory of recoverable erased files.

DISK DOCTOR will pay for itself the first time it is used.

Best of all, DISK DOCTOR operates almost complete automatically. The small amount of user interaction is explained in the manual as well as prompted by DISK DOCTOR.

Requires: 48K CP/M, two drives needed for complete operation.

DISK DOCTOR: \$100.00
Manual Alone: \$10.00

CP/M Formats: 8" soft sectored, 5" Northstar, 5" Micropolis Mod II, Vector MZ, Superbrain DD/QD, Apple II+

Book Review

microcomputer as a controller of standard or custom analog sound-synthesizing equipment, and how a computer can simulate the analog module's functions in software to provide direct music synthesis.

The first chapter of the computer-controller section explains circuit details of the three voltage-controlled synthesizer modules—voltage-controlled oscillator, voltage-controlled amplifier, and voltage-controlled filter. Component values are provided along with construction tips for building those modules.

The next chapter, on data-conversion techniques, starts with a tutorial on the terminology regarding the use of D/A (digital-to-analog) and A/D (analog-to-digital) converters. All circuits for the various conversion techniques are given, along with component values and available devices. One impressive circuit shows how to make a 128-channel microcomputer-controlled D/A converter for less than \$50.

The remaining four chapters in this section deal with the "systems" aspects of a computer-controlled synthesizer. A chapter on signal routing shows how the computer and various switching devices can replace the ever-confusing patch cords on conventional analog synthesizers. Two chapters on input devices follow: one entirely on keyboard-input methods and one on other devices such as ribbon controllers, joysticks, and digitizers. The last chapter describes the role of computer-graphics displays as aids in computer music composition.

The last section of the book, on direct computer synthesis of music, gives details on digital sound generation and filtering techniques, and includes the techniques that the author

has pioneered through much of his previous writings. The section opens with a discussion of quality data-conversion techniques. Three chapters follow on digital sound-generation methods, including separate chapters on filtering and percussive sound generation. The chapter on digital tone-generation techniques includes the author's table-look-up method for generating precomputed waveforms and algorithms, and includes uses of Fourier techniques for "synthesis from scratch." The digital-filtering chapter gives techniques for reverberation and chorus effects.

Direct computer synthesis of music is usually not a real-time technique. But, as the author points out, these techniques are very useful for those designing real-time systems for live performances.

A fascinating chapter follows on the analysis of natural sounds for modification and resynthesis. Methods of three-dimensional spectral plotting for harmonic visualization are covered. Also mentioned are some advanced techniques for sound analysis, such as linear prediction, autocorrelation, and homomorphic analysis.

The last two chapters deal with digital hardware and music-synthesis software. The digital synthesis of music can be accomplished by using either hardware or specific software techniques, or a combination of the two. These chapters discuss the trade-offs of each method. Among other topics the hardware chapter presents circuits for digital multiplexed oscillators, Fourier-series tone generators, and hybrid voice modules. Some of the available music-synthesis boards for small computer systems are also analyzed.

The last chapter describes

Z-80 FORTH \$50.00

Fast, interactive, and flexible language well suited for real time applications. Full fig-FORTH* and FORTH-79* vocabularies, plus extensions for access to all CP/M** functions. Uses standard CP/M compatible random access files for screen storage. Eight-inch soft-sectored single density diskette includes: interpreter/compiler, line editor, screen editor, Z-80 assembler, decompiler, utilities, and demonstration programs. 60 page user manual supplied. Requires Digital Research CP/M 2.x or MP/M 1.x. Price includes tax and shipping by first class mail or UPS.

!! REAL TIME !!

The TIME MACHINE from ALPHA OMEGA COMPUTER SYSTEMS isn't just another digital clock chip surrounded by interface circuitry. It's an intelligent microcomputer based peripheral device.

The TIME MACHINE communicates with your computer via a serial I/O port at a user-selectable data rate between 300 and 2400 baud. RS-232, RS-422, or current loop communication may be used.

Battery protection against power loss is included. The TIME MACHINE automatically computes day of the week and leap year. Buffered output pulses at one second, one minute, and one hour intervals are provided.

Dimensions are 2.5 x 4.75 x 7.5 inches. Batteries, power supply, and communication cable are included.

Price is only \$450 single lot and quantity discounts are available. Dealer inquiries invited. Off the shelf delivery.

Book Review

the hierarchy of music-software systems with examples from each level. Fixed-point-arithmetic routines for the 6502 processor are given, along with Fourier-series routines for waveform-table filling and much more. The chapter ends with a discussion of the high-level NOTRAN music-composition language.

In summary, this book is a milestone in microcomputer history. Its publication marks the progression — from novelty to serious instruments of expression — of musical applications of small computer systems. With little modification, the book could serve as a reference source on generalized data collection, signal processing, and process control using microcomputers. ■

BYTE's Bits

Errata Sheets for Osborne Books

If you have been having trouble running some of the CBASIC programs in Osborne/McGraw-Hill business books, a simple request will bring quick relief in the form of errata sheets. The sheets should have been sent with every ordered copy of *Payroll with Cost Accounting*, *Accounts Payable and Accounts Receivable*, and *General Ledger*. If errata sheets weren't included in your book, contact Sean Dugan, Customer Relations, Osborne/McGraw-Hill, 630 Bancroft Way, Department B10, Berkeley CA 94710, (415) 548-2805. ■

CP/M DATA ENTRY

"RADAR"

RADAR is a high speed data entry system that will run on any CP/M system providing a "3741" style key-to-disk environment. RADAR is ideal for replacing KEYPUNCH machines and older, slower key-to-disk systems like the 3741's and 42's.

Features:

- Verify Mode
- Check Digit Processor
- Auto Dup/Manual Dup
- 16 Accumulators
- Parameter Driven (No Programming)
- "Virtual" File Access
- Add or Delete Records
- Record Retrieval By Number Or Content
- Full Editing Capability
- Operator Prompts
- Extremely Fast (Written In Assembly Language)

In addition to "heavy-duty" data entry, RADAR is also the ideal "front-end" for many applications programs, providing aquisition and retrieval of keyed data with a degree of reliability simply not possible with any other technique. RADAR can cut programming time by more than 30%, simply because there is no longer any need to write the "input" portion of a program, just let RADAR handle it!

Write or call for free brochure. The RADAR manual is also available separately for \$25.00.

Clubs and Newsletters

Atari Users Group

The Bay Area Atari Users Group meets on the first Monday and on the third Tuesday of each month at 7 PM. The Monday-night meeting takes place at Foothill College, and the Tuesday-night meeting is at Interim Electronics, 447 S Bascom Ave, San Jose, California. The group publishes a newsletter. The dues for the group are \$12 per year. The club currently has eight disks of public-domain software for sale at \$5 per disk. The monthly meetings feature speakers discussing micro-computer uses and the Atari. Write to the Bay Area Atari Users Group, c/o Foothill College, 12345 El Monte Rd, Los Altos Hills CA 94022.

Just for LAUGHS

The Louisville Apple User Group—Hardware and Software (LAUGHS) has separate meetings for the business, software, and special-interest subgroups. A monthly newsletter is published. The subscription rate is \$15 per year. For information, contact LAUGHS, c/o Pat Connelly, 3127 Kayelawn Dr, Louisville KY 40220.

Behavioral Sciences AIM-65 Users Group

Workers in the behavioral and biological sciences who are currently using or are interested in using the Rockwell AIM-65 are invited to participate in this group. Areas of study include hardware and software for experimental control, data acquisition, statistical analyses, and other applications. If you are interested, please write, out-

lining areas of interest and current or planned projects, to Dr J W Moore Jr, POB 539, Middle Tennessee State University, Murfreesboro TN 37132.

OSI Group In Northern California

The Ohio Scientific Users Group of Northern California has been formed. For details, write to Rod Freeland, c/o Public Interest Computer Services, POB 1061, Berkeley CA 94701; or call (415) 654-9880 after 1 PM.

68XX Users Group

This is a group for those hobbyists who have a strong interest in Motorola 68XX microprocessors. The group meets on the second Tuesday of each month in Santa Clara at American Microsystems Inc. Contact the 68XX Users Group at POB 18081, San Jose CA 95158.

Boston Group Promotes Artificial Intelligence

The Boston Subchapter of Robotics International of SME has been formed under the auspices of the Society of Manufacturing Engineers. The group has been developed to provide a forum for the exchange of information between engineers, scientists, industrial producers, and users of robotics technology.

For more information on the Boston chapter and the national group, contact Robotics International of SME, One SME Dr, POB 930, Dearborn MI 48128. ■

HOW TO START A COMPUTER BUSINESS

"Computer Business Opportunities 1981" annual report covers the best moneymaking ventures - consulting, software packages, dealerships, systems houses, services, repping, maintenance, vertical markets and much more - plus 20 steps on how to start, where to be in the 80's, the small business market, common entrepreneur's mistakes, financing, marketing, competing with biggies, directory of services and self-help sources, going part-time to full-time. Nowhere under one cover is a better industry perspective for self-employment planning. Contents from key back-articles of "Computer Opportunities," the entrepreneur's newsletter since 1978, "Low Capital Computer Business Guide" (10,000 copies sold), and continuous research from our field seminars. Over 200 pages ring-bound, \$65.00, check, Visa, Mastercard, or written company P.O. 30 day refund guarantee.

June 1981

June 6-9

Atlanta Small Computer Show, Atlanta Hilton, Atlanta GA. Producers of small computers, peripheral equipment, supplies, and services will be exhibiting at this show. Business owners, corporate and government executives, data processing managers, doctors, lawyers, and other professionals, are expected to attend. Obtain additional information from The Atlanta Small Computer Show, 4060 Janice Dr, Suite C-1, East Point GA 30344, (404) 767-9798.

June 7-19

Computer Camps, Northeast Louisiana University (NLU), Monroe LA. NLU is offering two one-week sessions for

students in grades nine thru twelve. Beginners and advanced programmers are welcome. The cost is \$125 per session for room, board, fees, and text materials. Contact Dr Paul Ohme, Department of Mathematics, NLU, Monroe LA 71209, (318) 342-2186.

June 9-11

Understanding and Using Computer Graphics, Chicago IL. This seminar will cover the latest technology on graphic systems. It will be headed by Carl Machover. Contact Bob Sanzo, Frost & Sullivan Inc, 106 Fulton St, New York NY 10038, (212) 233-1080.

June 14-18

The Second National Conference of the National Computer Graphics Association,

Baltimore Convention Center, Baltimore MD. Computer graphics demonstrations and workshops will be held along with exhibits and seminars. Contact the National Computer Graphics Association Inc, 2033 M Street NW, Suite 330, Washington DC 20036, (202) 466-5895.

June 16-18

NEPCON East '81, New York Coliseum, New York NY. This exposition is aimed at engineers, prototype developers, production specialists and testing personnel. Technical programs will be presented. Contact Industrial & Scientific Conference Management Inc, 222 W Adams St, Chicago IL 60606, (312) 263-4866.

June 17-19

National Educational Computing Conference, North Texas State University, Denton TX. This conference will provide a forum for discussion between individuals, and institutions with interests in educational computing. Computer literacy, computer education for teachers, and computers in education are some of the topics to be covered. Contact Dr Jim Poirot, NECC-81, General Chairman, Computer Sciences Department, North Texas State University, Denton TX 76203.

June 21-26

Computer Workshops for Educators, Northeast Louisiana University (NLU), Monroe LA. This program will cover a wide variety of topics. Room, board, and tuition is \$135. Contact Dr Paul Ohme, Department of Mathematics, NLU, Monroe LA 71209, (318) 342-2186.

June 22-23 and June 24-27

Digital Electronics for

Automation and Instrumentation and Microcomputer Design Interfacing, Programming, and Application Using the Z80, 8080, and 8085, Virginia Polytechnic Institute and State University, Blacksburg VA. These two workshops allow participants to design and test concepts with the actual hardware. For more information, contact Dr Linda Leffel, CEC, Virginia Tech, Blacksburg VA 24061, (703) 961-5241.

June 23-25

Comdex/Spring '81, Madison Square Garden and New York Statler Hotel, New York NY. Contact the Interface Group, 160 Speen St, Framingham MA 01701, (800) 225-4620; in Massachusetts (617) 879-4502.

June 29-July 1

The Nineteenth Annual Meeting of the Association for Computational Linguistics, Stanford University, Stanford CA. Syntax, parsing, and sentence generation, computational semantics, discourse analysis and speech acts, speech analysis and synthesis, machine translation and machine-aided translation, and mathematical foundations of computational linguistics are some of the topics that will be discussed. Contact Don Walker, Artificial Intelligence Center, SRI International, Menlo Park CA 94025, (415) 326-6200, ext 3071.

July 1981

The 1981 Microcomputer Show, Wembley Conference Centre, London, England. Seminars on microcomputer applications in business, production, and in education will be presented. Topics for conference sessions include hardware availability, software packages and development, automatic test equipment, robotics, and process control. Exhibits from major European and American manufacturers will be featured. Contact TMAC, 680 Beach St, Suite 428, San Francisco CA 94109, (800) 227-3477; in California (415) 474-3000.

August 1981

August 24-27

Software Design, Reliability, and Testing, Sheraton Motor Inn, Lexington MA. This four-day seminar is for engineers, programmers, and technical managers. It examines concepts and tech-

niques for developing and testing reliable, cost-effective software. It also addresses management concerns and recommended policies. Tuition is \$600, which includes course notes, luncheon, refreshments, and an evening reception. Contact the Institute for Advanced Professional Studies, One Gateway Ctr, Newton MA 02158, (617) 964-1412.

August 24-28

The Seventh International Joint Conference on Artificial Intelligence, University of British Columbia, Vancouver, British Columbia, Canada. This conference examines computer applications of medical diagnosis, computer-aided design, robotics, programmable automation, speech understanding, vision, and other related topics. Tutorial programs and artificial-intelligence exhibits will be presented. For more information, contact Louis G Robinson, American Association for Artificial Intelligence, Stanford University, POB 3036, Stanford CA 94305, (415) 495-8825.

August 25-28

Vector and Parallel Pro-

cessors in Computational Science, Chester, England. This conference will concentrate on hardware, software, algorithms, applications, and case studies concerning vector and parallel processors. For information, contact Mrs S A Lowndes, Science Research Council, Daresbury Laboratory, Daresbury, Warrington, WA4 4AD, England.

August 26-29

The Fifth Annual National Small Computer Show, New York Coliseum, New York NY. There will be daily lectures, and a five-hour seminar will be presented daily for executives who need an introduction to the understanding, acquisition, and use of computers in business. The registration fee for the show is \$10 per day. The seminar for executives is \$200, which includes all materials and show registration. For information, contact the National Small Computer Show, 110 Charlotte Pl, Englewood Cliffs NJ 07632, (201) 569-8542.

August 28-30

Personal Computer Arts Festival '81 (PCAF '81), Philadelphia Civic Center,

Philadelphia PA. This show will include technical sessions, demonstrations, and exhibits, as well as the annual computer-music concert and computer graphics film and video show. PCAF '81 is being held in conjunction with the Personal Computing '81 show. For complete details, contact the address below.

The PCAF '81 Committee invites persons interested in microcomputer-music and digital-sound synthesis, computer composition tools, signal processing, computer-generated visual art, and other computer-based creations, to talk, demonstrate, display, or perform at PCAF '81. To participate, send a half-page description of a topic or performance (include tapes, prints, or slides, if possible) before July 1 to PCAF '81, POB 1954, Philadelphia PA 19105. ■

ANNOUNCING MMSFORTH VERSION 2.0: MORE FOR YOUR RADIO SHACK TRS-80 MODEL I OR MODEL III!

- ★ **MORE SPEED**
10-20 times faster than Level II BASIC
- ★ **MORE ROOM**
Very compact compiled code plus VIRTUAL MEMORY makes your RAM act larger. Variable number of block buffers. 31-char.-unique wordnames use only 4 bytes in header!
- ★ **MORE INSTRUCTIONS**
Add YOUR commands to its 79-STANDARD-plus instruction set! Far more complete than most Forths: single & double precision, arrays, string-handling, clock, more.
- ★ **MORE EASE**
Excellent full-screen Editor, structured & modular programming Word search utility
Optimized for your TRS-80 with key-board repeats, upper/lower case display driver, full ASCII, single- & double-width graphics, etc.
- ★ **MORE POWER**
Forth operating system
Interpreter AND compiler
8080 Assembler
(Z80 Assembler also available)
Intermix 35- to 80-track disk drives
Model III System can read, write & run Model I diskettes!
VIRTUAL I/O for video and printer, disk and tape (10-Megabyte hard disk available)

mmsFORTH

THE PROFESSIONAL FORTH FOR TRS-80

(Over 1,500 systems in use)

Prices:
MMSFORTH Disk System V2.0 (requires 1 disk drive & 16K RAM, 32K for Model III) ... \$129.95*
MMSFORTH Cassette System V2.0 (requires Level II BASIC & 16K RAM) ... \$89.95*

AND MMS GIVES IT PROFESSIONAL SUPPORT

Source code provided
MMSFORTH Newsletter
Many demo programs aboard
MMSFORTH User Groups
Inexpensive upgrades to latest version
Programming staff can provide advice, modifications and custom programs, to fit YOUR needs.

MMSFORTH UTILITIES DISKETTE: includes FLOATING POINT MATH (L2 BASIC ROM routines plus Complex numbers, Rectangular-Polar coordinate conversions, Degrees mode, more), plus a full Forth-style Z80 ASSEMBLER; plus a powerful CROSS-REFERENCER to list Forth words by block and line. All on one diskette (requires MMSFORTH V2.0, 1 drive & 32K RAM) ... \$39.95*

THE DATAHANDLER V1.1: a very sophisticated database management system operable by non-programmers (requires MMSFORTH V2.0, 1 drive & 32K RAM) ... \$59.95*

MMSFORTH GAMES DISKETTE: real-time graphics & board games w/source code. Includes BREAKFORTH, CRASHFORTH, FREEWAY, OHELLO & TICTACFORTH (requires MMSFORTH V2.0, 1 drive & 32K RAM) ... \$39.95*

Other MMSFORTH products under development

FORTH BOOKS AVAILABLE

MicroFORTH PRIMER - comes with MMSFORTH; separately ... \$15.00*
USING FORTH - more detailed & advanced than above ... \$25.00*
THREADED INTERPRETIVE LANGUAGES - advanced, excellent analysis of MMSFORTH-like language ... \$18.95*
PROGRAM DESIGN & CONSTRUCTION - intro. to structured program, good for Forth ... \$8.95*
FORTH 79 STANDARD MANUAL - official reference to 79 = STANDARD word set, etc. ... \$10.00*
CALTECH FORTH MANUAL - good on Forth internal structure, etc. ... \$10.00*
FORTH SPECIAL ISSUE, BYTE Magazine (Aug. 1980) - we stock this collector's item for Forth users and beginners ... \$4.00*

* - ORDERING INFORMATION: Software prices include manuals and require signing of a single system, single-user license. SPECIFY for Model I or Model III! Add \$2.00 S/H plus \$1.00 per additional book; Mass. orders add 5% tax. Foreign orders add 20%. UPS COD, VISA & M/C accepted; no unpaid purchase orders, please.

Book Reviews

TEX and METAFONT: New Directions In Typesetting

by Donald E Knuth
Digital Press,
Bedford, MA 1979
\$12.00

Reviewed by
Richard Fritzson
25 Callodine Ave
Buffalo, NY 14226

TEX and METAFONT is primarily documentation for two programs that Donald E Knuth has written. TEX is a text-formatting program for preparing documents and METAFONT is a program for designing new fonts for digital typesetting devices (such as high-density raster-scan printers). The two manuals are preceded by a forty-page talk that Dr Knuth presented to the American Mathematical Society on the subject of mathematical typography.

Normally, program manuals are not very interesting, even to people who are using the program, and, unfortunately, most people are not yet using TEX or METAFONT. However, if you are interested in how a well-designed program can produce high-quality camera-ready text, if you are interested in mathematical methods for designing new type fonts, or if you are just interested in how a world-renowned computer scientist goes about designing, writing, and documenting his programs, read this book.

The introductory lecture, "Mathematical Typography," describes two aspects of the same subject: how to make it easy to compose mathematical papers of very high visual quality (ie: easy to read, beautiful to look at),

and how to use mathematics in the design of good-looking type fonts. It contains very brief introductions to both TEX and METAFONT, but, more interestingly, Dr Knuth describes some of the history of typesetting and typefont design and some of the history of his investigations into mathematical typesetting and font design, including some of the decisions he made while designing the two programs. His prose is comfortable and enjoyable. If you find it necessary to skip the more technical mathematics, you're skipping only about one page of Dr Knuth's lecture.

Judged by its manual, TEX is unlike any other text-formatting program. The care and thought that went into its design set a standard for programs of this kind, and programs in general, that few can meet. It uses a novel algorithm for splitting text into equal-length lines which considers the appearance of the entire paragraph in which the line appears, not just the line itself. It has extensive facilities for handling mathematical formulas in a manner that is easy for the typist but yields professional-looking output. (Naturally it supports proportionally spaced type fonts, multiple-column page formats, footnote references, and other features which are essential for full typesetting capability.) The manual is easy to read, and while it certainly makes you wish you had a copy of TEX to run on your own computer, you don't need it to enjoy reading the manual. (Dr Knuth says that he intends to publish the programs in a book, putting them in the public domain.)

As far as I know, METAFONT, the typeface-design program, is unique. It allows you to write programs, in a special METAFONT language, that specify the shapes of a family of characters — that is, it allows you to design your own type fonts. Currently though, only high-density raster-scan

Book Review

printers can print the new fonts, and these devices are still extremely expensive. Consequently, the micro-computer applications for a font-design program are limited. However, like the TEX manual, the META-FONT manual is both interesting and informative. It reads as though the author were standing at times in front of you lecturing and, at other times, behind you looking over your shoulder, helping. Even if you are just interested in the design of type fonts by Dr Knuth's analytic method, you will find this book useful. (The manual includes many exercises. While they are interesting to read, if you're not actually trying to learn to use TEX or META-FONT you may well want to skip them; I did.)

I used to think that only a hard-core, lost soul computer hacker could enjoy reading a manual for a program he might never use. This book has made me reconsider. ■

BYTE's Bugs

Correction

The name of the manufacturer of the wire-wrap prototyping board mentioned in "What's Inside Radio Shack's Color Computer?" (March 1981, BYTE, page 90) should have been Vector Electronic Company. We apologize for any confusion this may have caused. ■

Notice of Omission

Due to a processing error the Washington Computer Service ad which appeared on page 27 of the May Byte had no Reader Service Number.

For more information regarding their "no problem trial offer" circle 475 on the inquiry card in this issue.

First Annual Undergraduate Paper Competition in Cryptology

Cryptologia, a magazine devoted to cryptology, has announced a contest for undergraduate students who have an interest in the study of encoding and decoding. A \$300 award will be given to the student whose paper on any aspect of cryptology is judged the most valuable. Topics can include technical, historical, and literary subjects concerning cryptology.

Papers must be no more than twenty typewritten pages in length, double-spaced and referenced. Four copies must be submitted. Only original works that have never been published should be submitted. Authors must be enrolled in an undergraduate curriculum at the time of composition. All copies become the property of *Cryptologia* and the magazine assumes publication rights on all entries.

The papers will be judged by the editors of the magazine, and the winner will be announced on April 1, 1982, with publication of the winning paper in the July 1982 issue of *Cryptologia*. For information, contact *Cryptologia*, Albion College, Albion MI 49224. ■

Give to the college of your choice.

A Public Service of This Magazine
& The Advertising Council.

What do you want your computer and video player to do that they can't do now?

- ☐ A. Display video segments then automatically switch to computer text.
- ☐ B. Display multiple-choice options at each stage of the presentation, then, depending on the choice made, replay any portion of text and/or video, or move on to new material.
- ☐ C. Show any portion of the computer text and/or video (randomly accessed) depending on the pace and/or choices of the user.
- ☐ D. ALL OF THE ABOVE . . . and do it all on one screen.

If you checked D, contact us for more information on Cavri Interactive Video. We offer a reasonably priced, sophisticated system that links an Apple* or an RS-232 interfacing computer with a Sony or Panasonic video player and TV screen — **with no modification**. Included are simple, straightforward instructions for writing your programs. Plus frame-accurate stops and switches with no accumulated error.

Write or call today and join the many companies, large and small, that are improving their audiovisual training and testing with the new technology pioneered by Cavri.

Training, of course, is only one application. Now you can catalogue anything — for example, a museum can videotape its paintings, sculptures, and artifacts, then show them by artist, subject, date, or any other grouping, regardless of the sequence in which they were recorded on the videotape. Tell us your application, and we can help by supplying the system and guidance on programming and videotape or videodisc production.

An Easy-to-Use A/D Converter

Robert Daggit
1648 Hillview Rd
New Brighton MN 55112

With the addition of an analog-to-digital converter and some simple sensors, a microcomputer can monitor analog voltages, read light levels, sense temperatures, or read the analog output from laboratory instruments. The six-channel A/D

About the Author

Robert Daggit is a Senior Research Technician at the Systems and Research Center of Honeywell Inc in Minneapolis. He is interested in the application of microprocessors to small, dedicated systems for laboratory use.

(analog-to-digital) converter that I will describe reads positive voltages from 0 to 3 V, with either 8 or 10 bits of accuracy. It interfaces to the computer through an 8-bit bidirectional peripheral port whose I/O (input/output) lines are individually programmable and latched when used as outputs.

Once started, the converter operates asynchronously with respect to the computer and requires a minimum of code in the user's pro-

gram. Conversion times are voltage-dependent, with an approximate range of 1 to 2 ms (milliseconds). A sample program segment and subroutine written in 6502 assembly language are included to illustrate the use of the converter.

Major components of the A/D converter unit, shown as a schematic diagram in figure 1, are a Fairchild Semiconductor $\mu A9708$ analog-to-digital-converter integrated circuit, a clock, a 12-bit counter, and a 16-bit output multiplexer. The $\mu A9708$ features an analog input multiplexer, controlled by address lines A0 thru A2, that selects one of eight input sources. Address 0 selects the internal zero voltage, and address 7 selects the internal reference voltage. Addresses 1 thru 6 select user inputs I1 thru I6, as shown in figure 1. Although the manufacturer rates the $\mu A9708$ at 8 bits of accuracy, it performs well at 10 bits of accuracy. A series of voltage readings taken at 0.1 V intervals from 0 to 3 V compared favorably with readings taken with a Fluke Model 8000A Digital Multimeter. Voltage differences ranged from 2 to 11 mV (millivolts). The greatest relative error, defined as the absolute value of the voltage difference divided by the multimeter reading, was less than 2%.

In order to read one of the analog channels, the channel address is placed on the address lines, and the ramp-start input (pin 3) is set low. The ramp-stop output (pin 7) goes high at this time. With the address lines stable for a signal-acquisition time of about 1 ms, the ramp capacitor, C1, charges to the voltage

FINDING SOLUTIONS AND BEING COMPETITIVE IS OUR BUSINESS.

Having problems and looking for a computer to help solve them? Are you finding computer dealers come in one of two ways? Either Full system support with Full price or Take it or Leave it with Low price. At Omega we don't believe that you should have to make a choice. Yes, we're in business to sell products but also, to solve your problems. Our prices will be the lowest possible. Our support and product quality will be second to none. Check out our Mail Order prices in this ad (our retail prices will be higher). See if you don't agree with our first claim. For our second claim, call us with your data processing needs and problems. Better yet, come in and see us. Finding solutions and being competitive is our business. We never forget either of them.

OMEGA MICRO COMPUTERS

The Problem Solving Company

3447 Torrance Boulevard • Torrance, California 90503 • (213) 370-9456

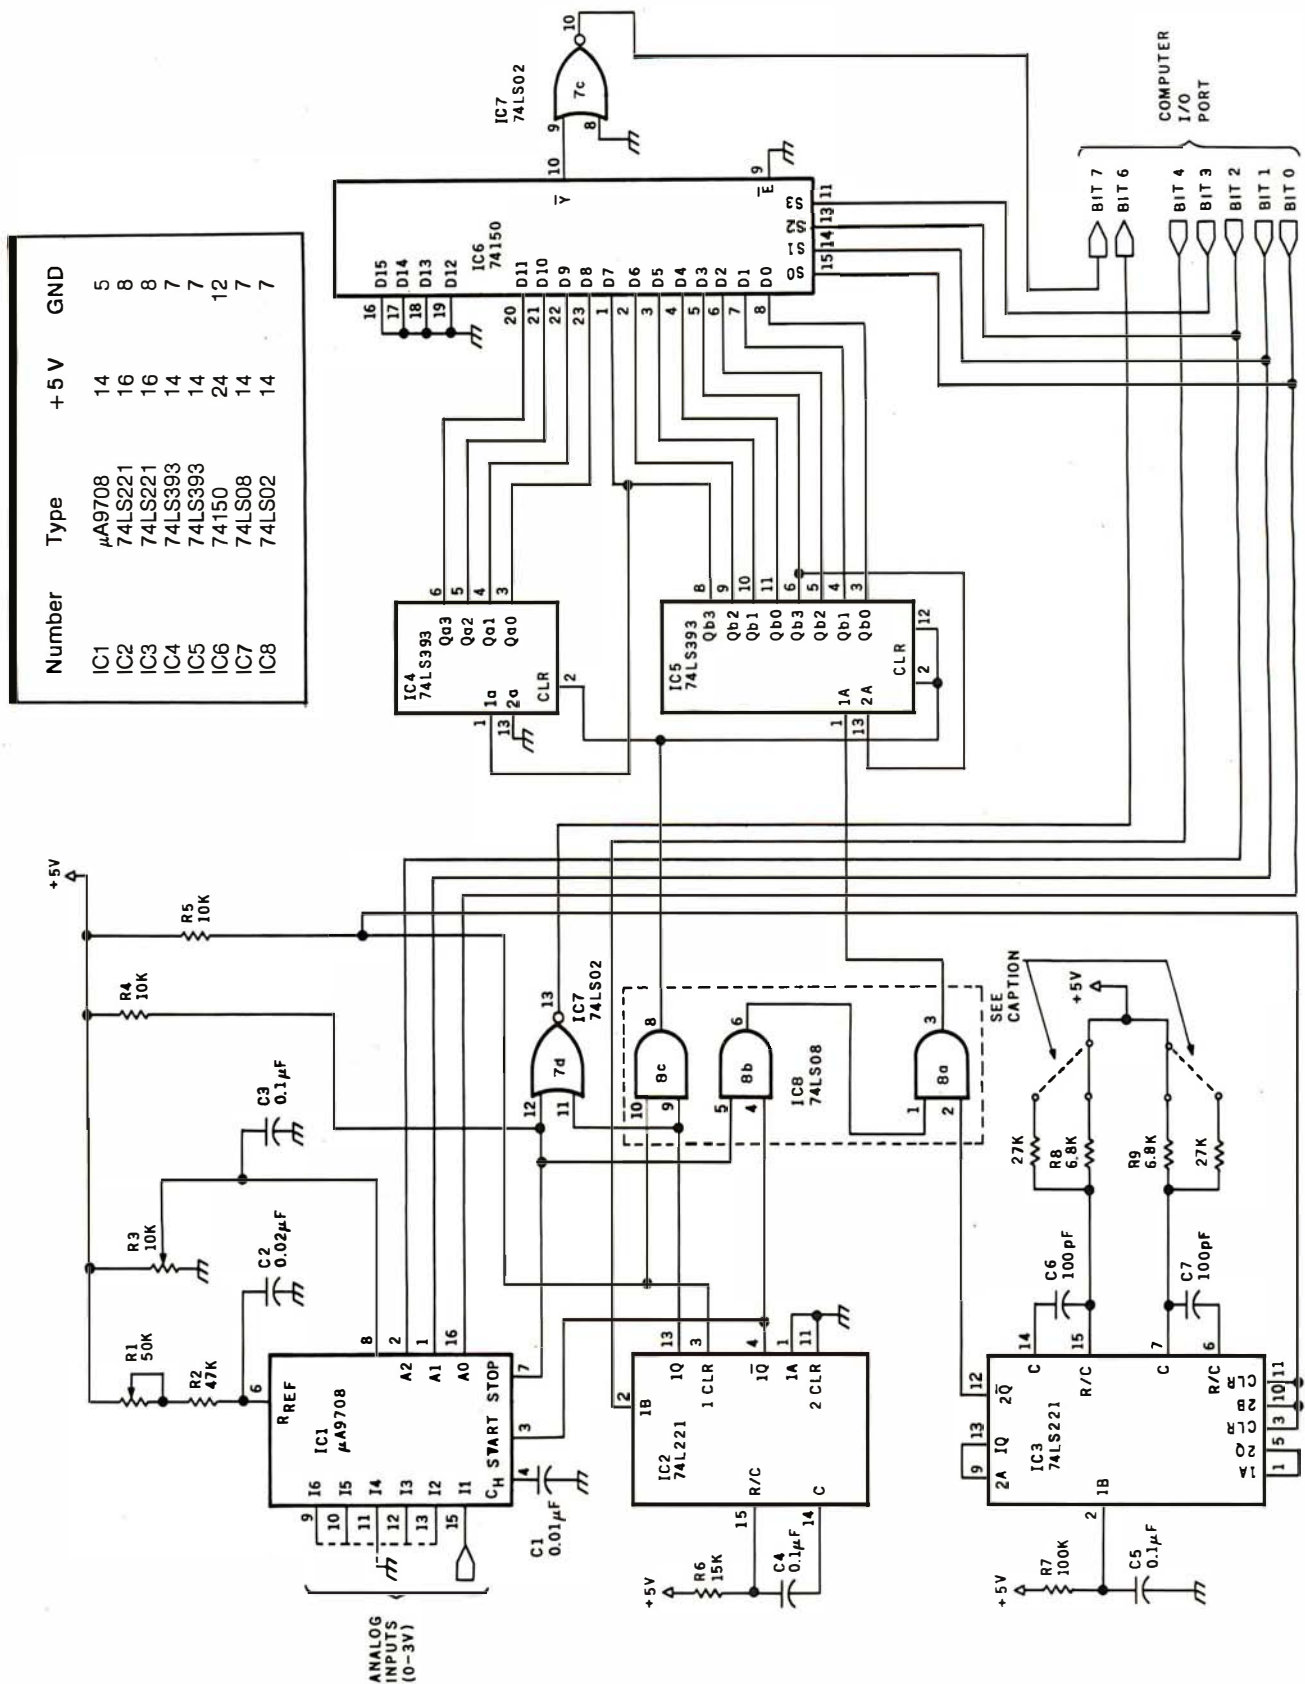

Figure 1: Schematic diagram of the A/D converter. Inputs I1 thru I6 of IC1 are the user's analog-input channels. The input voltage is converted to a binary number in the counter (IC4 and IC5), where it is retained until needed. The binary output is read in bit-serial fashion by the output multiplexer, IC6. Interface to the computer is through an 8-bit I/O port.

Easy selection of 8 or 10 bits of accuracy is accomplished by installing the clock timing components (C6, C7, R8, and R9) on a DIP header (see figure 2).

Figure 2: Wiring of the DIP header (top view). This optional feature may be installed for easy selection of 8 or 10 bits of accuracy. The clock timing components are mounted on the header in such a way that when it is reversed in its socket, the time constants of IC3 (a 74LS221 monostable multivibrator) are appropriately changed.

Listing 1: A program segment, written for the 6502 microprocessor, that illustrates use of the A/D converter. Hexadecimal 10 is added to the channel address, and this value is then written to the interfacing I/O port to start the conversion. Data from the counter is read when needed.

at the selected input. The ramp-start input is then set high. This disconnects the input voltage from the ramp capacitor, which now discharges linearly at a controlled rate through resistors R1 and R2. When the ramp capacitor is discharged, the ramp-stop output goes low. Since the capacitor's discharge time is directly proportional to the input voltage, a counter running during the interval from the conditions ramp-start-high to ramp-stop-low will, at the end, contain a count that is proportional to input voltage.

In this circuit, a low-to-high transition of peripheral-port bit 4 triggers IC2, a 74LS221 monostable multivibrator. Its Q output goes high to clear the counter, while the \bar{Q} output holds the ramp-start line low, allowing the μ A9708 (IC1) to acquire the voltage from the selected channel. Upon timing out, IC2's outputs change states, raising the ramp-start line to a high logic level and turning on the counter. When the ramp-stop line goes low, the counting stops, and peripheral-port bit 6 goes high to signal the computer that the conversion is complete. The counter value is the useful output of the converter, and is retained until it has been read and the next conversion cycle has begun.

The clock, IC3, is a multivibrator whose frequency is set to about 1 MHz by the 100 pF capacitors, C6 and C7, and 6.8 k-ohm resistors, R8 and R9, for a 10-bit count. An 8-bit count is selected by replacing R8 and R9 with 27 k-ohm resistors. If the frequency-determining components are installed symmetrically on a header, as shown in figure 2, the 8- or 10-bit counts can be selected by simply unplugging the header and reversing it.

A ripple counter and a 16-bit output multiplexer, controlled by address lines A0 thru A3, complete the circuit.

Before the circuit is used, all unused analog inputs should be grounded and the reference voltage and ramp slope should be set. The 10 k-ohm potentiometer, R3, is first adjusted until the reference voltage at pin 8 of IC1 is exactly 3 V, as in-

SciTronics introduces...

REAL TIME CLOCKS

with full Clock/Calendar Functions

The Worry-free Clocks for People
Who Don't Have Time to Worry!!

What makes them worry-free?

- Crystal controlled for high (.002%) accuracy
- Lithium battery backup for continuous clock operation (6000 hrs!!!)
- Complete software in BASIC-including programs to Set and Read clock
- Clock generates interrupts (seconds, minutes, hour) for foreground/background operation

Applications:

- Logging Computer on time
- Timing of events
- Use it with the SciTronics Remote Controller for Real Time control of A.C. operated lights and appliances

Versions available for:

- | | |
|---------------------------|----------------------|
| • S-100 bus computers | RTC-100 \$159 |
| • Apple II computer | RTC-A \$129 |
| • SciTronics RC-80 owners | RC-80CK \$109 |

The reachable star.

The STAR puts a quality 300 bps RS232C modem within reach of the small computer user...the same modem selected by IBM, GE, RCA, and ADP. The price? Under \$200!

We've designed this compact modem with exclusive triple-seal acoustic cups, crystal controlled oscillator, and built-in diagnostics and indicators. It's packaged inside an attractive injection molded case...and we stand behind the STAR with a two year warranty!

STAR models are available that interface directly with RS232C machines such as APPLE, ATARI, and NORTH STAR or IEEE 488 machines such as the PET, and that operate with either U.S. or European frequencies.

Available throughout the U.S., Canada, and Europe. For information and nearest dealer, call (408) 734-9810 or TWX 910-339-9519.

dictated by an accurate voltmeter. Then the converter connected to the computer is run in a loop, repeatedly addressing and reading the reference voltage at address 7. The 50 k-ohm potentiometer, R1, is adjusted until the count is just under hexadecimal FF for an 8-bit count, or hexadecimal 3FF for a 10-bit count.

In normal use, the program must first configure the peripheral-port bits 0 thru 4 as outputs and bits 5 thru 7 as inputs, and it must clear bit 4. Voltage readings are taken by writing

the value of the channel address plus hexadecimal 10 to the peripheral port and then waiting until bit 6 goes high. The channel address should not be changed during this time. Reading of the counter data automatically clears peripheral port bit 4, enabling its low-to-high transition when the next address is written to the port. The counter is read a bit at a time by writing the address of the desired bit into the peripheral port, reading the port, and then left-shifting bit 7 (the counter data bit) into a register pair

Listing 2: RDADC, a 6502 subroutine to read data from the counter in the converter. The 16-bit counter value is returned in the accumulator and X register. Status bits reflect the condition of the high-order byte.

Table 1: Parts list for circuit of figure 1. Capacitor C1 should be a low-leakage type. No precision tolerances are required.

or 2 bytes of memory that will contain the 16-bit count. The sequence is repeated for each bit, starting with the most-significant bit at hexadecimal address 0F and ending with the least-significant bit at address 00.

The most efficient operation will result when the analog-to-digital conversion is initiated at a point in the program that occurs a number of instructions before the voltage reading is required. The computer is then free to execute the intervening instructions before having to wait for completion of the conversion. The hand-assembled program segment, shown in listing 1, illustrates the use of the converter and the RDADC subroutine (see listing 2). Note the instructions inserted between the initiation of the conversion at hexadecimal address 026A and the reading of the output at address 027A.

A nonzero count is always obtained, even when reading 0 V. This count must be subtracted from the reference voltage and channel counts. Thus, the computation for a linearized and scaled voltage reading becomes:

$$V(i) = \frac{\text{Count}(\text{Channel } i) - \text{Count}(0)}{\text{Count}(7) - \text{Count}(0)} \times V_{\text{REF}}$$

where V_{REF} is the reference voltage.

Long-term drift effects are minimized by reading the zero and reference voltages each time a channel is sampled. When reading very small input voltages, the possibility exists that a channel count may be smaller than the zero count. The apparent instability resulting from this condition is avoided by simply setting the channel count equal to the zero count.

The uses for such a converter are many and diverse. For example, if you are an energy-conscious homeowner, you may wish to monitor temperatures throughout your home. Or, if you are an amateur horticulturist, you may wish to monitor light intensity and temperatures of air and soil to optimize growing conditions for plants or cuttings. Whatever the application, I hope that this converter, with its 8 bits of accuracy for table subscripts or 10 bits of accuracy for better resolution, will serve you well. ■

Spoken to your Apple® lately?

With the Heuristics™ 2000 speech recognition board, you can train your Apple computer to recognize 64 words or phrases of your choice (or multiples thereof). Any command for any application.

The advanced Heuristics 2000, with microphone included, brings a whole new hands-off approach to data entry and program control — for a surprisingly low \$259. An optional head-set microphone (shown above) is also available.

TALK TO YOUR APPLE FOR ONLY \$259.

What's more, speech recognition is also available for S-100 computers, with our Heuristics 20S and 50 boards.

The 2000 also makes a very practical starter system for the Heuristics 5000 and 7000 industrial/commercial speech recognition units. These commercial units start at \$2500.

So the next time you have data to enter, words to process or menus to select, don't work your fingers to the bone. Talk to your Apple instead.

HEURISTICS 2000

The talk of the computer industry.™

Technical Forum

A Votrax Vocabulary

Timothy A Gargagliano and Kathryn L Fons
1394 Rankin St, Troy MI 48084

This vocabulary of 139 entries can be stored in as little as 770 bytes. The ASCII codes shown are for the TRS-80 voice synthesizer. Using Votrax symbology, however, this vocabulary is applicable to many other synthesizers, including the new SC01 phoneme speech chip.

[In February, Kathryn Fons and Tim Gargagliano coauthored an article entitled "Articulate Automata"

(February 1981 BYTE, page 164), in which they presented an overview of the physiology of speech and a look at how Votrax voice synthesizers are programmed. Since that article contained only general guidelines for programming voice synthesizers, they decided to provide us with more specific information in the form of this list of common computer terms and how they would be programmed....SM]

The Impossible Dream:

Computing e to 116,000 Places with a Personal Computer

Stephen Wozniak
Apple Computer Inc
10260 Bandley Dr
Cupertino CA 95014

The 1960s were a decade of unrest, turbulence, and accomplishment. Man walked on the moon, *Star Trek* was launched, and the first million digits of π were determined by a computer. Today, as we face the early 1980s, Robert Truax, a backyard hobbyist, is constructing a private spacecraft, *Star Trek* has been revived as a movie, and personal computers are a reality. As a people, passion drives us to explore the unknown reaches of our universe. It is pleasing to note that this exploration is no longer the exclusive domain of governments and large institutions.

The purpose of this article is to share my experiences in computing the mathematical constant e to 116,000 digits of precision on an Apple II computer. Although this computation has little intrinsic value or use, the experience was stimulating and educational. The problems I was forced to overcome gave me insights that greatly contributed to new floating-point routines. These routines were, in some cases, two to three times as fast as those currently implemented in some of our languages at Apple. Because I wanted to develop my own solutions to the problem, I did not research existing techniques for computing e to great precision. Therefore, my approaches are quite possibly not state-of-the-art.

I first calculated e to 47 K bytes of precision in January 1978. The program ran for 4.5 days, and the binary result was saved on cassette tape. Because I had no way of

detecting lost-bit errors on the Apple (16 K-byte dynamic memory circuits were new items back then), a second result, matching the first, was required. Only then would I have enough confidence in the binary result to print it in decimal.

Before I could rerun the 4.5 day program successfully, other projects at Apple, principally the floppy-disk controller, forced me to deposit the project in the bottom drawer. This article, already begun, was postponed along with it. Two years later, in March 1980, I pulled the e project out of the drawer and reran it, obtaining the same results. As usual (for some of us), writing the magazine article consumed more time than that spent meeting the technical challenges.

Little Things Add Up

To compute the value of e , a method or formula must be found or derived. The *CRC Standard Mathematical Tables* handbook (see references) provides the well-known formula:

$$e = 1 + 1/1! + 1/2! + 1/3! + \dots$$

We know that e is approximately 2.71828. For the sake of simplicity, we will deal with the fractional part only (.71828, etc) and abbreviate it *efrac*.

$$efrac = 1/2! + 1/3! + 1/4! + \dots$$

Because each term is less than one-half the prior term, this series converges with the property that the sum of all terms beyond a specified n th term is less than that n th term. Thus, if the series is truncated after n terms, the maximum error in the computation is less than $(1/n!)$. This property relates the number of terms used, n , to the precision obtained in the computation. Because this series contains a factorial in the denominator of the terms, it is said to converge rapidly. This means that great precision can be obtained with relatively few terms. For example,

Just before this issue went to press, Steve Wozniak told me that he had redesigned the theoretical "e-machine" that uses dedicated hardware for calculating e . The machine, which costs under \$10,000, would use disk storage on a hard disk to replace large amounts of programmable memory. Steve estimates that a calculation of e to 100,000,000 places (ten times as many places as the current calculation of e) could be made in three months of calculation time....GW

the *CRC Standard Mathematical Tables* handbook lists 100! as 9.3326×10^{157} , signifying that 100 terms will yield almost 158 digits of precision. The rate of convergence is sufficient that, for the problem at hand, neither algebraic manipulation of the series for faster convergence nor selection of a different formula is necessary.

Divide and Conquer

The following algorithm accomplishes the evaluation of the series for e . Of course, all critical routines should be implemented in highly optimized machine (assembly) language for speed. An extra hour spent optimizing the innermost loops could save days of computation time. Even self-modifying code should be used to save a critical microsecond! Binary arithmetic should be used to obtain maximal precision and the fastest possible computation time. Later, the result can be converted to decimal as it is printed.

The algorithm is as follows (also see figure 1):

1. Divide available memory equally into two arrays, TERM and E. The TERM array will contain successive terms ($1/i!$) and is initialized to 0.5 ($1/2!$). The E array will contain the running total of the terms and is also initialized to 0.5. Both arrays can be thought of as long bit streams of the fractional parts of the numbers they represent.
2. Set the variable DIVISOR to an initial value of 3.
3. Divide TERM by DIVISOR, forming $1/(DIVISOR!)$. Multiprecision division techniques will be discussed later.
4. Add TERM to E, keeping the assumed decimal points aligned. This sum will always be purely fractional (ie: it will never equal or exceed 1).
5. Increment the DIVISOR variable.
6. Repeat steps 3, 4, and 5 until TERM is reduced to all zeros or until a predetermined maximum divisor is reached.

This basic computation algorithm utilizes only 50% of available memory for the result. By rearranging the series for e , we can arrive at an approach that utilizes 100% of the memory.

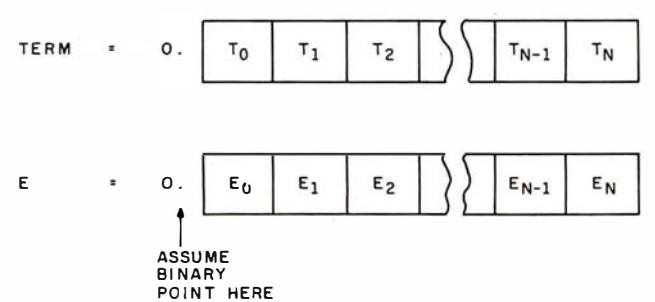

Figure 1: Memory usage in the first algorithm to calculate e . Equal amounts of memory are devoted to a sequence of bytes representing the value of the current term being calculated (TERM) and the sum of all terms calculated thus far (E). Both numbers are seen as binary fractions (ie: the leftmost bit represents $1/2$, the next bit represents $1/4$, etc).

We begin by reversing the order of terms in $efrac$:

$$efrac = 1/2! + 1/3! + \dots + 1/(n-1)! + 1/n! \text{ (n terms)}$$

$$= 1/n! + 1/(n-1)! + \dots + 1/3! + 1/2!$$

We then develop the following identity:

$$\frac{1}{i!} + \frac{1}{(i-1)!} = \frac{1}{i(i-1)!} + \frac{1}{(i-1)!}$$

$$= \frac{\frac{1}{i} + 1}{(i-1)!}$$

By repeatedly applying this identity to the formula, we get:

$$efrac = \frac{\frac{\frac{1}{n} + 1}{(n-1)} + 1}{3} + 1$$

$$= \frac{2}{2}$$

On inspection, the second series is equivalent to the first for n terms. A notable property of the new series is that the computation begins with the n th (greatest) divisor and ends with 2 (the smallest). The algorithm for computing e with this series is as follows:

1. Allocate all available memory to the E array (which stores the value of $efrac$, the fractional part of e). Initialize it to zero.
2. Set the initial value of DIVISOR to n , the precalculated maximum term (where $n!$ is greater than the precision of the result to be computed).
3. Add 1 to E and divide by the current DIVISOR. The addition may simply imply setting the carry before dividing.
4. Decrement the DIVISOR.
5. Repeat steps 3 and 4 until the divisor equals 1.

Divisor	E (after step 3)
5	1/5
4	1/4 + 1/(4 × 5)
3	1/3 + 1/(3 × 4) + 1/(3 × 4 × 5)
2	1/2 + 1/(2 × 3) + 1/(2 × 3 × 4) + 1/(2 × 3 × 4 × 5)
	(1/2! + 1/3! + 1/4! + 1/5!)

Table 1: Example of the calculation of e by the first algorithm.

An example of this algorithm for $n=5$ is given in table 1.

How Large Is It?

An associate of mine once discovered that integrated circuit layouts could be conveniently specified in nano-acres! In the computation of e , it is more meaningful to specify the precision of the result in decimal digits rather than in the number of bytes allocated. The following formula performs the conversion:

$$\log_{10}(x) = \log_{256}(x) \times \log_{10}(256)$$

$$(\text{number of digits}) = (\text{number of bytes}) \times (2.40824)$$

For example, assume that 14 K bytes of memory are allocated to the fraction of e . The number of digits of accuracy this represents is given by the following:

$$\begin{aligned} \text{number of digits} &= 14 \times 1024 \times 2.40824 \\ &= 34524.5 \text{ digits} \end{aligned}$$

The process of calculating the number of terms needed to compute e to this precision is less straightforward. What must be determined is the minimum value of n , where $n!$ is greater than the precision corresponding to available memory. For the above example, this is the minimum n such that $n!$ is greater than 10^{34524} . The CRC *Standard Mathematical Tables* handbook lists Stirling's Formula, an equation useful for calculating the

magnitude of $n!$ for reasonably large n :

$$\lim_{n \rightarrow \infty} \frac{n! \exp(n)}{n^{(n+0.5)}} = \sqrt{2\pi}$$

Taking the natural logarithms of both sides, we get:

$$\lim_{n \rightarrow \infty} \ln(n!) = \frac{\ln(2\pi)}{2} + [\ln(n)] [n+0.5] - n$$

Dividing by $\ln(10)$ to obtain the result in common (base-10) logarithms, we see the following:

$$\lim_{n \rightarrow \infty} \log_{10}(n!) = \frac{\log_{10}(2\pi)}{2} + [\log_{10}(n)] [n+0.5] - \frac{n}{\ln(10)}$$

The integer portion of this result gives us one less than the number of digits in $(n!)$.

The HP-41C calculator program in listing 1 calculates $\log_{10}(n!)$ (the number of digits in $n!$), given n .

By trial and error, it is easy to zero in on the minimum n for which $\log_{10}(n!)$ is greater than 34,524, the number of digits of precision corresponding to 14 K bytes of memory. Table 2 shows a set of values for n in the order in which they were calculated to find the desired value.

The value 9716 is found to be the minimum suitable value of n . Because it is difficult to relate the precision of $n!$ to that of $1/n!$, a slightly higher value (perhaps 9720) should be used for n . This will also compensate for minor formula or calculation errors.

A Multiprecision Division Algorithm

The problem at hand calls for the division of a very large dividend (possibly several kilobytes) by a moderate divisor (2 bytes). The general approach is to shift the divisor relative to the dividend, from the most significant bits toward the least, performing the familiar subtract/replace and shift technique that we call long division.

A few general optimizations should be considered. First, the following algorithm assumes that the divisor is less than 32,768 (2^{15}). If the divisor were to exceed 32,768, it would have to be compared to a value that could exceed 16 bits (2 bytes). Because indexed operations on the 6502 microprocessor are slower than absolute, direct, zero-page, or register operations, a few "fast" memory locations are allocated to hold the temporary (ie: relating to the current byte) dividend/quotient, and remainder. These locations are designated A0 (dividend/quotient), and A1 and A2 (2-byte remainder), and they should be allocated to the most accessible memory locations (or registers). The high-order byte of

the fraction array E is assumed to be E(0), and the low-order byte is E(n). Remember that the 2-byte divisor, NH and NL, represents a whole number, and that the dividend represents a binary fraction with the binary point directly to the left of the MSB (most significant bit) of E(0).

In the algorithm that follows, the A0 byte represents the current byte, E(i), of the dividend at step 2. By step 6, however, all the digits of the dividend have been shifted out to the left (to the A1, A2 combination), and the digits of the new quotient have been shifted into A0 from the right. A0 is actually doing the work of two 8-bit registers.

Of course, all computation should be done in binary for maximum precision and speed. While targeted for 8-bit machines, these techniques are applicable to machines of longer word lengths.

The "add 1 and divide by n" algorithm (see figure 2) is as follows:

1. Initialize the remainder (locations A2 and A1) to 1, effectively adding 1.0 to the fractional dividend prior to dividing. (A2 is the most significant byte of the remainder.) This accommodates the algorithm developed for calculating e . An unmodified divide operation would call for initializing the remainder to zero. Initialize the index, i , to zero.
2. Move the next dividend byte, E(i), to location A0 to divide it by n . Shift A0 left 1 bit, moving the MSB into the carry bit.
3. Rotate the 16-bit remainder (A2 and A1) to the left by 1 bit, and rotate the carry bit from A0 into the LSB (least significant bit) of A1. This corresponds to the "shift" portion of the subtract-and-shift algorithm for division. No overflow can occur from this shift because the residual remainder must be less than twice the divisor, which in turn is less than $32,768 (2^{15})$.

n	$\log_{10}(n!)$ (number of digits in $n!$)
10000	35659.5
9000	31681.9
9700	34461.4
9800	34860.3
9730	34581.0
9720	34541.2
9710	34501.3
9715	34521.2
9716	34525.2

Table 2: Trial-and-error determination of the number of terms, n , needed to obtain 34,524 digits of precision in the calculation of e . In the algorithm used to calculate e , the smallest contribution to the final value is made by the term $(1/n!)$. The number of digits in $(n!)$ is determined by estimating the value of $n!$ and taking the logarithm to the base 10. The desired value of n is the first integer value greater than 34,524.

4. Compare the remainder, A2 and A1, to the divisor locations NH and NL. If the remainder is greater, then replace it with the difference of the two and set the quotient bit to 1. Otherwise, clear the quotient bit.
5. Rotate the quotient bit into the LSB of A0, and rotate the MSB of A0 into the carry bit.
6. Perform steps 3, 4, and 5, a total of eight times. Then replace E(i) with the byte in A0 (which is now the quotient of the byte-wide division just finished). Increment the index, i , and continue at step 2 until the last byte, E(n), has been processed.

Special Optimizations

I drive a small car and have found that it is helpful to accelerate or decelerate slightly in advance of certain stretches of the road (especially hills and downgrades) to obtain an adequate performance. Similarly, it is

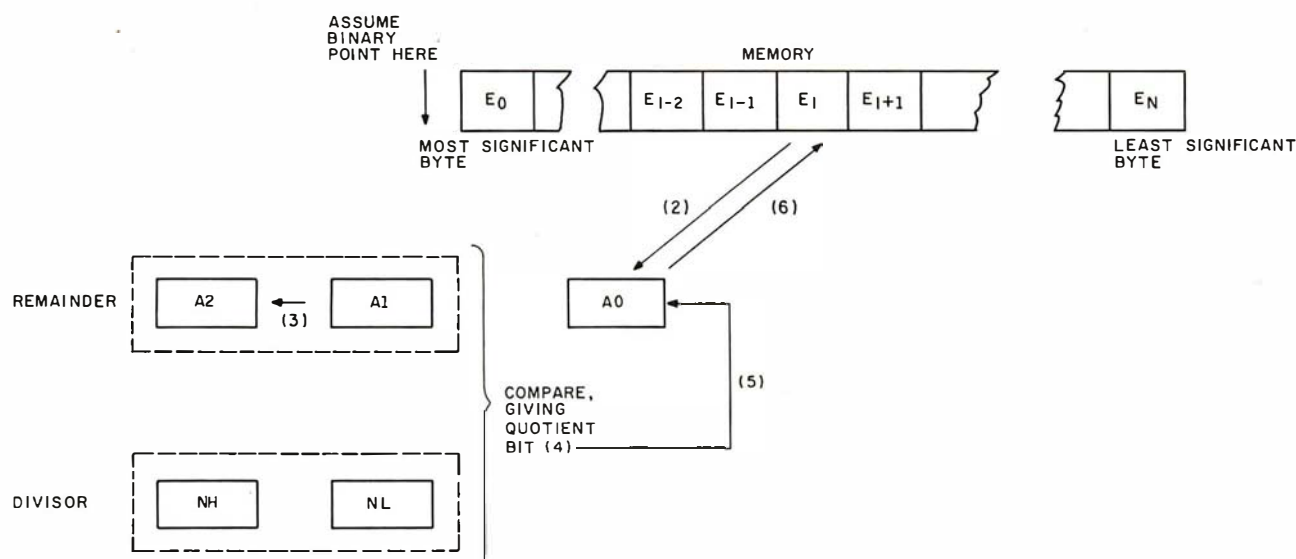

Figure 2: Memory usage in the multiple-byte "add 1 and divide by n " division algorithm. The second algorithm (given in the text) reduces memory usage by 50% by using one long string of bytes in the computation process. The E array is divided 1 byte at a time by the 2-byte divisor. The A0 byte is used to store both the dividend and the quotient at different points in the algorithm. The numbers in parentheses refer to numbered steps in the algorithm.

A Message to our Subscribers

From time to time we make the BYTE subscriber list available to other companies who wish to send our subscribers promotional material about their products. We take great care to screen these companies, choosing only those who are reputable, and whose products, services, or information we feel would be of interest to you. Direct mail is an efficient medium for presenting the latest personal computer goods and services to our subscribers.

Many BYTE subscribers appreciate this controlled use of our mailing list, and look forward to finding

information of interest to them in the mail. Used are our subscribers' names and addresses only (no other information we may have is ever given).

While we believe the distribution of this information is of benefit to our subscribers, we firmly respect the wishes of any subscriber who does not want to receive such promotional literature. Should you wish to restrict the use of your name, simply send your request to BYTE Publications Inc, Attn: Circulation Department, 70 Main St, Peterborough NH 03458. Thank you.

sometimes necessary to compensate for the inherent deficiencies of microprocessors (eg: their size) by carefully implementing specific optimizations. For example, the comparison performed in step 4 (discussed above) would normally be done by subtracting the low, and then high bytes, and possibly preserving the difference for replacement of the remainder. Within certain processors, it may be faster to first compare the high bytes, since they frequently dictate the comparison result (255 out of 256 times for arbitrary contents). Also, the critical steps 3, 4, and 5 can be coded eight times in-line to avoid the overhead time of a loop. And because the divisor changes infrequently, it can be coded as fast immediate-mode data. After each full divide, the code, which resides in programmable memory, can be modified for the next divisor.

The 6502 assembly-language program in listing 2 calculates e in 14 K bytes of memory. In order to keep the listing brief for this article, the program is not fully optimized. The major operation (add 1, divide) is not coded in-line eight times but is instead implemented as a loop. Because the Y register is used as a loop counter, it is not available as an index to the e array, and time-consuming increment instructions must be performed on the instructions at EREF1 and EREF2. Also, it is slightly faster not to move the current dividend byte of e into a separate fast location (A0 in the algorithm).

The e array begins at hexadecimal location 800 (which is the most significant byte of the array). This secondary text-screen page of the Apple II allows you to view roughly the first 1 K bytes of e as they are calculated. Although the character representation is not readily useful, it is at least comforting to observe that the program is working on the correct section of memory. Do not execute this program until you read further and have a good idea of how long it runs before completion. Also, remember that although the result is in binary and somewhat meaningless, it will later be converted to decimal and printed.

Tomorrow Is a Long Time

The execution time of this program is proportional to the number of divisions performed (9719 for the above example), the number of bytes being divided (14 K bytes in this case), and the average divide time per byte.

The average divide time per byte is calculated as follows. In listing 2, the numbers in parentheses are the cycle times of all significant instructions of the divide routine. Careful analysis shows that when the high-order dividend (remainder) byte is less than the high-order divisor byte, 23 cycles are used. When the former is greater than or equal to the latter, 39 cycles are used, with approximately 13.5 additional cycles (on the average) if the two are equal. Statistically, the remainder will be less than the divisor half of the time and greater than or equal to the divisor half of the time. Analysis reveals that the 2 bytes will be equal approximately one out of every $2H$ comparisons, where H is the high-order divisor

To further improve service to our customers we have installed a toll-free WATS line in our Peterborough, New Hampshire office.

9178

byte contents. In the example, H varies from 37 down to 0, so the average frequency of equality is 1 in 37. Using this "fudge factor," the average cycle time per 1-bit partial division is computed as follows:

$$\begin{aligned}\text{cycles per bit} &= 2^3/2 + 3^9/2 + 13.5/37 \\ &= 31.3649 \text{ cycles}\end{aligned}$$

Every byte divided includes eight of the above itera-

tions plus an overhead of 21 cycles, giving the following average:

$$\begin{aligned}\text{cycles per byte} &= (\text{cycles per bit} \times 8 \text{ bits per byte}) \\ &\quad + 21 \\ &= 31.3649 \times 8 + 21 \\ &= 271.919 \text{ cycles}\end{aligned}$$

The average time per cycle on the Apple II is a function of the crystal frequency (14.31818 MHz) and the fre-

Text continued from page 397:

quency-dividing circuitry that generates the microprocessor clock. Due to color-graphics considerations, a slight adjustment (to eliminate display jitter) is made, which introduces a constant multiplying the crystal period, and gives us the following time per machine cycle:

$$\begin{aligned}\text{time per cycle} &= 912/((65)(14.31818 \text{ MHz})) \\ &= 0.9799269 \mu\text{s}\end{aligned}$$

The division time per byte (in μs) and time per program execution can now be calculated:

$$\begin{aligned}\text{time per byte} &= \text{cycles per byte} \times \text{time per cycle} \\ &= 271.919 \text{ cycles} \times .9799269 \mu\text{s} \\ &\quad \text{per cycle} \\ &= 266.46 \mu\text{s} \\ \text{time per program} &= \text{time per byte} \times \text{number of} \\ &\quad \text{bytes} \times \text{number of divisions} \\ &= 266.46 \mu\text{s} \times (14)(1024) \times 9719 \\ &= 37,126 \text{ seconds} \\ &= 10.3 \text{ hours}\end{aligned}$$

Note that as you compute e to greater precision, both the number of divisors and the length of each division increase. Also, at some point, a 2-byte division no longer suffices and a 3-byte division must be used. This causes the execution time to vary with roughly the second power of the precision sought. For example, three times the precision takes ten times as long to calculate!

Running the Example Program

If you wish to try the example program before branching out on your own, a few suggestions should be heeded. First, it is a shame to run a program for 10 hours and then find out it contained a minor bug. By changing N (the maximum divisor) to 1000 and NUMPAG to 4 (for 1 K bytes of precision), a quick trial/practice version can be assembled. The practice run allows the user to get the obvious mistakes out of the way with minimum consequence and verify that the assembly is correct. The following commands will clear the memory locations used, run the program, and finish in about 4.5 minutes (273 seconds). Hexadecimal location 0800 should contain B7, and location 0BFF should contain 24 upon completion. As mentioned previously, you can watch the calculation proceed by displaying the secondary text screen on the Apple II. During the trial run, it should be constantly changing.

The following two lines (to be entered when the Apple II is in monitor mode) allow you to run the test program:

```
*800:0 N801<800.BFEM
*C055 240G C054
```

The first line clears the area of memory that will be used, and the second line switches the video display to text

page 2 (which will contain the value of e being computed), runs the program of listing 2, then returns to text page 1 when the program is complete.

The real (10-hour) example program should be run twice, and the results compared to verify that the program does not contain a minor bug and that the constants were properly determined. As discussed below, it is not necessary to initialize memory before running the program if the constant n has been properly selected. Therefore, it is recommended that the program be run first with initialized memory and later with random (uninitialized) memory. These results, when compared, should be identical. Once you have confidence in the binary result, save it on tape or floppy disk for printing in decimal.

Go Forth and Multiply

The computed binary fraction must next be converted to decimal and printed. The general method of converting a binary fraction to a decimal fraction is to repeatedly multiply it by decimal 10 (in binary). The carry from each multiplication (integer portion of product) is the next decimal digit. Because the most significant digits are generated first, the result can be printed as it is generated.

A higher-level language such as BASIC should be used to format the output, but unless you are planning a short vacation, highly optimized machine language should be used for the base conversion. The 6502 programs in listing 3 accomplish the conversion. Subroutine INIT is called once to generate a 256-entry, multiply-by-100 lookup table. Subroutine MULT scans the e array, from the least toward the most significant bytes, multiplying each byte by 100 via a fast table lookup. It also handles carries. The resultant carry is a 2-digit number between 0 and 99 that is returned to BASIC for printing. Note that multiplying by 100, instead of 10, generates 2 digits per pass.

Seeing Is Believing

The BASIC formatting program in listing 4 should produce an attractive printout. No single program will suffice, due to the fact that printers and people are so varied. The considerations include page headers (title, date, page number), lines per page, spacing between lines, digits per line, digit groupings (eg: groups separated by a space or two), and margins. For example, the poor horizontal registration of a Centronics 779 printer is painfully obvious with single-spaced printouts but almost undetectable with double-spaced ones. A little trial and error will insure that your printout is a perfect "10."

The program in listing 4 was used with an NEC (Nippon Electric Company) Spinwriter. It prints 60 digits per line (twelve groups of 5 digits, separated by single blanks) and 60 lines per page. The page heading is simply the letter e and the page number, carefully aligned with the left and right margins. The text " $e=2.$ " precedes the first digit of the printout. The program ends after printing 34,500 digits, despite the fact that an additional 24 digits are re-

quired in order to be correct. The final page and line number were precalculated to detect this stopping point. Lines 200 thru 230 make up a digit-printing subroutine that calls the assembly-language multiply-by-100 routine (MULT) every other digit.

Analysis of the Algorithm

The specified algorithm has the property that the contents of e at a given stage of computation will yet be divided by $(i!)$, where i is the current divisor. The first im-

plication of this property is that the allocated memory need not be initialized, since it will all be reduced to insignificance when divided by $n!$ (because n , the starting divisor, was specifically chosen such that $n!$ is greater than the significance corresponding to that much memory).

An interesting aspect of this implication is that the result is perfect to the last calculated bit, despite the fact that terms beyond the n th have been omitted. Additional terms (before the n th) would simply cause the allocated

IF YOU NEED \$5,000...20,000 EVEN UP TO 500,000 TO START A NEW BUSINESS OR TO EXPAND AN EXISTING FIRM—THEN READ WHY YOU TOO WILL CALL THIS INCREDIBLE MONEY RAISING MANUAL

"THE SMALL BUSINESS BORROWER'S BIBLE"

Practically prepares the loan application for you line-by-line...the "proper" way.
All properly prepared applications are processed faster...no red tape!
Guaranteed Loans...Direct Loans...and Immediate Loans are available now!

Most men and women seriously interested in starting their own business are eligible to apply — including those who already own a business and need capital fast for expansion...or to stay afloat...even if they've been flatly refused by banks and turned down elsewhere! Yet, too, many never qualify, simply because they do not know how to "properly" prepare the loan application...

In order to help those people applying for these guaranteed and direct loans fill out their loan applications the "right way," ICC Business Research, through its diligent compilation and research efforts, has successfully assembled and published a comprehensive, easy-to-follow seminar manual: The Money Raiser's Guaranteed and Direct Loans Manual, that will quickly show you practically everything you'll need to know to prepare a loan application to get federally Guaranteed and Direct Loans.

Here are just some of the many important benefits The Money Raiser's Guaranteed and Direct Loans Manual provides you with:

- a completely filled in sample set of actual SBA loan application forms, all properly filled in for you to easily follow—helps you in quickly preparing your own loan application the right way. Each line on the sample application forms is explained and illustrated in easy-to-understand language.
- fast application preparation procedures for getting loans for both new start up business ventures and established firms.
- advises you on how to properly answer key questions necessary for loan approval and in order to help avoid having your application turned down—gives you advice on what you should not do under any circumstances.
- what simple steps you take to guarantee eligibility—no matter if you do not presently qualify.
- where you can file your application for fastest processing.

At this point the most important question you want answered is: Just where is all this loan money coming from? Incredible as it may sound—these Guaranteed Loans, Direct Loans...and Immediate Loans are indeed available right now — from the best, and yet, the most overlooked and frequently the most ignored and sometimes outright ridiculed... "made-run-of" source of ready money...fast capital, in America — THE UNITED STATES GOVERNMENT.

Of course, there are those who upon hearing the words "UNITED STATES GOVERNMENT" will instantly freeze up and frown and say:

"...only minorities can get small business loan money from the government!"

Yet, on the other hand (and most puzzling) others will rant on and on and on that:

"...don't even try, it's just impossible — all those Business Loans Programs are strictly for the Chryslers, the Lockheeds, the big corporations...not for the little guy or small companies." etc.

Still there are those who declare:

"...I need money right now...and small business government loans take too darn long. It's impossible to qualify. No one ever gets one of those loans."

Or you may hear these comments:

"...My accountant's junior assistant says he thinks it might be a waste of my time!" "Heck, there's too much worrisome paperwork and red tape to wade through!"

Frankly — such rantings and ravings are just a lot of "bull" without any real basis — and only serve to clearly show that lack of knowledge...misinformation...and and not quite fully understanding the UNITED STATES GOVERNMENT'S Small Business Administration's (SBA) Programs have unfortunately caused a lot of people to ignore what is without a doubt — not only the most important and generous source of financing for new business start ups and existing business expansions in this country — but of the entire world!

Now that you've heard the "bull" about the United States Government's SBA Loan Program — take a few more moments and read the following facts:

- Only 9.6% of approved loans were actually made to minorities last year
- What SBA recognizes as a "small business" actually applies to 97% of all the companies in the nation
- Red tape comes about only when the loan application is sent back due to applicant not providing the requested information...or providing the wrong information
- The SBA is required by Congress to provide a minimum dollar amount in business loans each fiscal year in order to lawfully comply with strict quotas. (Almost 5 billion this year)

Yet, despite the millions who miss out — there are still literally thousands of ambitious men and women nationwide who are properly applying — being approved — and obtaining sufficient funds to either start a new business, a franchise, or buy out or expand an existing one. Mostly, they are all just typical Americans with no fancy titles, who used essentially the same effective know-how to fill out their applications that you'll find in the Money Raiser's Guaranteed and Direct Loans Manual.

So don't you dare be shy about applying for and accepting these guaranteed and direct government loans. Curiously enough, the government is actually very much

GUARANTEE #1
Simply — look over this most effective money raising loan preparation assistance manual for 15 days — and, then, if you are not convinced that it can actually help you obtain the Business Loan you need right away — just return it for a full and prompt refund.

interested in helping you start a business that will make a lot of money. It's to their advantage — the more money you make the more they stand to collect in taxes. In fiscal 1981, our nation's good old generous "uncle" will either lend directly or guarantee billions of dollars in loan requests, along with technical assistance and even sales procurement assistance. Remember, if you don't apply for these available SBA funds somebody else certainly will.

Don't lose out — now is the best time to place your order for this comprehensive manual. It is not sold in stores. Available only by mail through this ad, directly from ICC Business Research, the exclusive publisher, at just a small fraction of what it would cost for the services of a private loan advisor or to attend a seminar.

For example:
Initially, this amazing Guaranteed and Direct Loans Manual was specially designed to be the basis of a Small Business Loan Seminar — where each registrant would pay an admission fee of \$450. But our company felt that since the manual's quality instructions were so exceptionally crystal-clear that anyone who could read, could successfully use its techniques without having to attend a seminar or pay for costly private loan advisory assistance services.

Therefore, for those purchasing the manual by mail, no 3 day class, no course and accommodations are required. And rather than \$450 we could slash the price all the way down to just a mere \$35 — a small portion of a typical seminar attendance fee — providing you promptly fill in and mail coupon below with fee while this special "seminar-in-print" manual offer is still available by mail at this relatively low price!

Remember, this most unique manual quickly provides you with actual sample copies of SBA Loan application and all other required forms—already properly filled in for you to easily use as reliably accurate step-by-step guides—thus offering you complete assurance that your application will be properly prepared, and thereby immediately putting you on the right road to obtaining fast, no red-tape loan approval.

GUARANTEE #2
Even after 15 days — here's how you are still strongly protected — if you decide to keep the manual — and you apply for an SBA Loan anytime within 1 year...your loan must be approved and you must actually receive the funds or your money will be refunded in full.

YOU GET NOT 1 BUT 2 STRONG BINDING GUARANTEES!
YOUR LOAN MUST ACTUALLY BE APPROVED OR YOUR MONEY BACK

Of course, no one can guarantee that every request will be approved — but clearly we are firmly convinced that any sound business request properly prepared — showing a reasonable chance of repayment and submitted to SBA — will be approved. Only because we are so confident that this is a fact do we dare make such a strong binding seldom-heard-of Double Guarantee. No stronger guarantee possible! It actually pays for you to order a copy of this remarkable manual — 100% tax deductible as a business expense...Don't delay—send for yours right now!

THE EASY NO-NONSENSE WAY TO RAISE CAPITAL FAST!

memory to have different contents (ie: be initialized arbitrarily) when the n th term is reached. Since division proceeds from high toward low significant bits, arbitrary data beyond a specified least significant byte can never affect the contents of that byte or any more significant byte. There can be no accumulated truncation errors such as those encountered with summation-of-terms approaches.

The second implication is that, at a given stage of calculation, only the most significant bytes of e (ie: those that will not subsequently be divided to insignificance) need to be divided! The first divisions can be very short, only a few bytes or so, while the last ones must encompass all of e . For a given divisor, i , the number of (least significant) bytes of e which need *not* be divided is $\log_{256}(i!)$, which may be calculated by the HP-41C program in listing 5. Note that it calls the previously written program FACTLOG, which calculates the number of digits of $(i!)$. The algorithm used is:

number of bytes of $i!$ = number of digits of $i!/\log_{10}(256)$

It is unfeasible to precalculate the number of bytes to leave undivided (or the number to divide) for each divisor and to save it in a table: because the table would consume a great deal of memory. As an alternative, the divisors can be broken into blocks of, say, 1 K bytes each, and for each block a fixed number of bytes (of e)

can be divided. The number of bytes to divide for a given block is calculated as the total number of bytes in the e array minus the number of insignificant bytes (calculated as above) corresponding to the minimum divisor of the block, plus a "guard" byte or two to cover slight calculation errors.

In a later program that calculated e to 116,000 digits, I used 47 K bytes (188 pages of 256 bytes each) of memory, and the maximum divisor was 28,800. The divisors were grouped into fifteen blocks of 2 K-byte divisors each, and the number of memory pages not to be divided were precalculated for each block (see table 3). This version of the program used a lookup table to determine how many pages to divide (188 minus the number *not* to divide) for each divisor. This technique proved extremely beneficial because it reduced the computation time from four days to two.

The 47 K-byte version used virtually all the memory in a 48 K-byte Apple. The e array occupied hexadecimal locations 400 thru BFFF. A starting divisor of 28,800

Listing 5: *The FACTBYT program for the Hewlett-Packard HP-41C calculator. This program calculates the precision to which the multibyte division has to be carried out for a given divisor. See table 3 for details.*

THE ADVANTAGES OF THE FUNCTIONAL GROUP:

Diversity of projects.
Varied technical
challenge.

Involvement from concept through implementation.

Broad interaction and cooperation between software and hardware.

We've got it all at Harris Composition Systems in Melbourne, Florida.

We're pioneers in word processing. And the world's first and leading supplier of total word processing systems for use in the newspaper industry.

And we're now extending that "system-oriented" approach into the *office systems* field—integrating data processing, word processing,

electronic mail, advanced communications and networking. With an ambitious program representing the largest investment Harris Corporation has ever made to develop a new product.

That means the opportunity for personal participation and immediate contribution—across the board—in both newspaper word processing and office systems.

For experienced professionals with expertise in
☐ Real Time Software and Hardware/Firmware Development
☐ Digital Design
☐ Analog Design
☐ Applications Programming.

All supported by a billion dollar, Fortune 500 corporation. All in a modern, stimu-

lating work environment. All in beautiful, affordable Melbourne, Florida—on the shores of the deep blue Atlantic.

Send your resume and salary history to: **Daphne Cumberland, Composition Systems Division, Dept. BT, P.O. Box 2080, Melbourne, Florida 32901.** Or call COLLECT (305) 242-5321, in Florida. Outside Florida call 1-800-327-1493.

AFFORDABLE

Here at KLOFOX, affordable is not a motto, it's a way of doing business. Prices start at \$1695.00, for a single 8" drive system.

All systems feature a single board Z-80 CPU (NO BUSS HEADACHES), runs CP/M 2.2 (BIOS INCLUDED), reliable SD recording, 64K bytes of RAM, four channel CTC, and either an 80 x 24 full-featured video interface or a two channel serial interface. PLUS a six month full warranty*.

OPTIONS:

2 Channel parallel interface- add \$29.95
Both serial & video interface- add \$95.95
Single to dual drive conversion kit with drive and necessary hardware- add \$495.00
All options may be installed by customer.

Table 3: Table of truncated multibyte divisions that can be made during the second algorithm. Due to the nature of the second algorithm, most divisors need not carry the division out the entire length of the multibyte dividend. By grouping divisors and not calculating the bytes that are unimportant to that particular group, calculation time can be significantly decreased.

resulted in 115,925 digits of precision. Because the result occupied screen memory, it had to be written to cassette tape by the calculation program before returning to the Apple II monitor. Because there was no memory available for a BASIC program, the output formatting program was coded in assembly language and resided in parts of pages 0 and 1. Pages 2 and 3 were used for the multiply-by-100 tables.

On the Horizon

As with any limitless search, there remains the challenge to compute e to even greater precision. Unfortunately, the computation time of the specified algorithm is exponentially related to the precision sought. Divide operations on high-speed computers (approximately 12 μ s per 32 bits) are two orders of magnitude faster than the 6502 routines. The ultimate approach is to construct a custom "divide machine." Current technologies and low programmable memory prices make it feasible to construct such a machine with a thousand-fold performance improvement over the 6502 microprocessor. With such a machine, e could be computed to 100,000,000 digits within a couple of years (one year constructing and testing, one year computing). Such a machine would require power supply backup and error-correcting memory. The memory should be purchased at the latest possible date due to decreasing prices.

Once a few simple concepts are understood, the computation that I have described is as easy as π (see listing 6). Why do people spend time computing these numbers to such absurd precision? Because they're there, I suppose. Who knows what great discoveries will be made by personal computer owners in the coming years? Rest assured that a guaranteed place in the mathematics Hall of Fame awaits the discoverer of the next greatest prime number. ■

Listing 6: A partial printout of the value of e . The first line agrees with the fifty-place value for e that is given in the CRC Standard Mathematical Tables.

FILE BOX DISKETTE STORAGE SYSTEM

\$24⁹⁵ for 5¼" disks
\$29.95 . . . for 8" disks

MTC brings you the **ULTIMATE** diskette storage system, at an affordable price. Storing 50 to 60 diskettes, this durable, smoke-colored acrylic unit provides easy access through the use of index dividers and adjustable tabs. Unique lid design provides dust-free protection and doubles as a carrying handle.

'RINGS' & THINGS

Help prevent data loss and media damage due to improper diskette centering and rotation with the **FLOPPY SAVER™** reinforcing hub ring kit. 7-mil mylar rings install in seconds. Kit is complete with centering tool, pressure ring, 25 adhesive backed hub rings and instructions.

HUB RING KIT for 5¼" disks . . . \$10.95
HUB RING KIT for 8" disks . . . \$12.95
REFILLS (50 Hub Rings) . . . \$ 5.95

Protect your expensive disk drives and your valuable diskettes with our diskette drive head cleaning kit. The kit, consisting of a pair of special "diskettes", cleaning solution and instructions, can be used for 52 cleanings. Removes contamination from recording surfaces in seconds without harming drives.

CLEANING KIT for 5¼" drives . . . \$24.95

PLASTIC LIBRARY CASES (not shown)

An economical form of storage for 10 to 15 diskettes, and is suitable for your bookshelf! Case opens into a vertical holder for easy access.

5¼-inch diskette case . . . \$3.50
8-inch diskette case . . . \$3.95

MICROPARAPHERNALIA DISKETTES (box of ten)

Let Your TRS-80™ Test Itself With THE FLOPPY DOCTOR & MEMORY DIAGNOSTIC

by THE MICRO CLINIC

A complete checkup for your Model I. THE FLOPPY DOCTOR completely checks every sector of 35- or 40-track disk drives. Tests motor speed, head positioning, controller functions, status bits and provides complete error logging. THE MEMORY DIAGNOSTIC checks for proper write/read, refresh, executability and exclusivity of all address locations. Includes both diagnostics and complete instruction manual.
SYSTEM DIAGNOSTICS . . . \$19.95

An improved version of the SYSTEM DIAGNOSTICS above. Designed for single or double density, 35-, 40-, 77-, or 80-track disk drives. Includes new and modified tests. Features THE FLOPPY DOCTOR, Version 3.0.

SYSTEM DIAGNOSTICS-V3 . . \$24.95

Single Sided, Soft-Sector 5¼-inch,
(for TRS-80™) Mini-floppy

DISKETTES

\$21⁹⁵ box of 10

These are factory fresh, absolutely first quality (no seconds!) mini-floppies. They are complete with envelopes, labels and write-protect tabs in a shrink-wrapped box.

PLAIN JANE™ DISKETTES

The Beautiful Floppy
with the Magnetic Personality™

Thousands of people have switched to this low-cost alternative. These quality diskettes are packaged in a plain white box . . . no fancy printing, fancy names or fancy labels, not even our own (labels cost money). Trust us.

PLAIN JANET™ Diskettes . . . \$21.95
10 boxes of 10 . . . (each box)\$21.50

PLAIN JANE™ *Gold*

Introducing MTC's premium generic diskette. Single-Sided, Soft-Sector, DOUBLE-DENSITY, 5¼-inch diskettes with reinforcing HUB-RINGS. Individually 100% ERROR-FREE certified. Invest in GOLD!

PLAIN JANET™ *Gold* . . . \$25.95

VERBATIM'S PREMIUM DISKETTES AT
AFFORDABLE PRICES

DATALIFE™

Seven data-shielding improvements mean greater durability and longer data life. These individually, 100% error-free certified diskettes feature thicker oxide coating, longer-lasting lubricant, improved liner, superior polishing and more! Meets or exceeds IBM, Shugart, ANSI, ECMA and ISO standards. Reinforcing HUB RINGS help prevent data loss and media damage, reducing errors.

SYSTEMS

CCS

Microcomputer Systems

A new line of S-100 Z80-based microcomputer systems from California Computer Systems provides real-time hardware-vector interrupt and interrupt-nesting capabilities. Multiprocessing with interleaved data-transfer rates of up to 2 megabytes per second can be achieved using direct memory access. The main board has two programmable real-time clocks, two 8-bit parallel interface channels, and two programmable RS-232C serial I/O (input/output) channels, one of which may be used for synchronous communication. The chassis contains a nineteen-slot motherboard and a power supply.

The CCS OASIS multitasking operating system features re-entrant and relocatable program capabilities, and employs an ISAM (indexed-sequential access method) file structure. Task-to-task communication, file protection, timekeeping, spooling, overlay, and device-independent I/O are accomplished through software. The operating system is supported with debug, editing, relocatable-linkage, and file-sort utilities. CP/M and MP/M can be used with the system. A BASIC interpreter and compiler, FORTRAN, COBOL, and Pascal compilers are also available.

Optional boards include printer and terminal interfaces, 16 K-, 32 K-, and 64 K-byte memory boards, floppy-disk subsystems and expansions, and Winchester-type disk subsystems and expansions. Prices for the CCS systems range up to \$9100. Contact California Computer Systems, Marketing Department, 250 Caribbean Dr, Sunnyvale CA 94086, (408) 734-5811.

Circle 524 on inquiry card.

Acom's 8088 Board

The P188 is an S-100 bus 8088 microprocessor board that will run as a stand-alone processor or as a slave. Jumpers allow configuring the card to run in different operating modes, as well as with static or dynamic memory. The 8088 microprocessor has 16-bit internal architecture, addresses 1 megabyte of mem-

ory, and features 8- and 16-bit signed and unsigned arithmetic in binary or decimal, including multiply and divide.

The P188 costs \$345 assembled and tested, and \$275 in kit form. For more information, contact Acom Electronics, 4151 Middlefield Rd, Palo Alto CA 94303, (415) 494-7499.

Circle 525 on inquiry card.

Single-Board 6800 Computer

The ACS 12-PRO requires a power supply and terminal to operate. The 6800-based system provides two programmable 16-bit timers, an RS-232C serial port, two 8-bit parallel ports with handshake control, and up to 4 K bytes of programmable memory and 6 K bytes of PROM (programmable read-only memory).

The ACS 12-PRO is supplied with Datricon's 4 K D-FORTH operating system. With 1 K bytes of programmable memory, D-FORTH, and a manual, the ACS 12-PRO sells for \$495. For additional details, contact Datricon Corporation, 7911 NE 33rd Dr, Suite 200, Portland OR 97211, (503) 284-8277.

Circle 526 on inquiry card.

Where Do New Products Items Come From?

The information printed in the new products pages of BYTE is obtained from "new product" or "press release" copy sent by the promoters of new products. If in our judgment the information might be of interest to the personal computing experimenters and homebrewers who read BYTE, we print it in some form. We openly solicit releases and photos from manufacturers and suppliers to this marketplace. The information is printed more or less as a first-in first-out queue, subject to occasional priority modifications. While we would not knowingly print untrue or inaccurate data, or data from unreliable companies, our capacity to evaluate the products and companies appearing in the "What's New?" feature is necessarily limited. We therefore cannot be responsible for product quality or company performance.

What's New?

PERIPHERALS

Apple IEEE-488 Interface

The A488 interface card permits the Apple II and the Apple II Plus to operate as IEEE-488 bus controllers. The A488 uses an MC68488 LSI 488-controller integrated circuit that decreases the number of circuits required. The board has 2 K bytes of firmware in EPROM (erasable programmable read-only memory). For special-purpose firmware development, the EPROM can be replaced by programmable memory. The A488 allows bus and

system control with character-string instrument commands for set-up, measure, clear, local, trigger, serial-poll, and respond functions. Any equipment on the bus can be designated by a name of up to sixteen characters. Up to fifteen pieces of equipment can be connected to the A488 across a distance of up to 20 meters (66 feet) from the Apple. The card's driver firmware is linked to string routines within Applesoft; floating-point processing of numeric data is easily done. Error checking is included, and software timing loops are not needed.

The A488 is priced at \$475 from SSM Microcomputer Products Inc, 2190 Paragon Dr, San Jose CA 95131, (408) 946-7400.

Circle 527 on inquiry card.

Printer for Under \$1000

The Model 445 Paper Tiger printer features a seven-wire ballistic-type print head and tractor-feed motor drives. The 445 can print at speeds up to 198 cps (characters per second). Functions include bold text and the ability to print 80 columns at 10 pitch and 132 columns at 16.7 pitch. Other features include the 96-character upper- and lower-case ASCII (American Standard Code for Information Interchange) character set, six or eight lines-per-inch vertical spacing, multiline buffering, and RS-232C- and Centronics-compatible parallel interfaces. Transmission rates from 110 to 1200 bps (bits per second) are selectable. Variable form length, perforation skipping, and the ability to handle six-part forms and roll paper are other features.

Integral Data Systems' DotPlot graphics capability is offered as an option. DotPlot enables printing the full range of graphics characters. The Paper Tiger Model 445 costs \$795 and the DotPlot package is \$99. Contact Integral Data Systems Inc, Milford NH 03055, (603) 673-9100.

Circle 529 on inquiry card.

Turn IBM Typewriters Into RS-232Cs

California Micro Computer's 5060 and 5061 modules enable the IBM Model 50, 60, and 75 electronic typewriters to perform as RS-232C-compatible computer I/O (input/output) devices. The modules can be installed and removed easily without requiring modifications to the typewriter. The model 5061 is a print-only

version, while the 5060 allows the typewriter to perform full terminal functions. Both units offer ASCII coding with full buffering. The 5061 costs \$497 and the 5060 is \$860.

For further information, contact California Micro Computer, 9323 Warbler Ave, Fountain Valley CA 92708, (714) 968-0890.

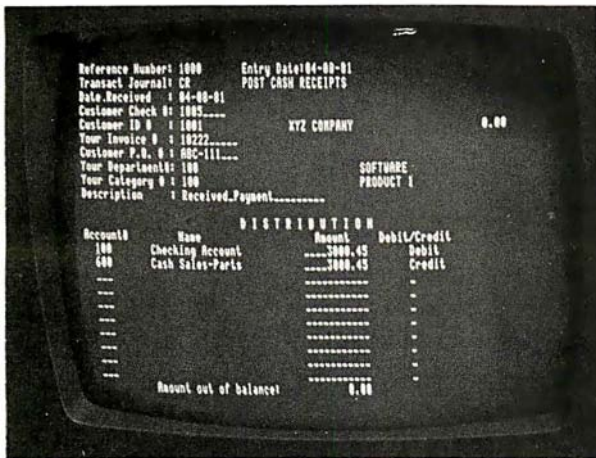

Circle 528 on inquiry card.

Extend the TRS-80 Color Computer Bus

The Color Connection is a device that extends the TRS-80 Color Computer system bus as a System-50 bus (SS-50). Using the Color Connection, floppy-disk drives and video terminals can be added, and the Color Computer's 16 K-byte internal memory can be expanded. The Color Connection sells for \$99.95 from Percom Data Company, 211 N Kirby, Garland TX 75042, (800) 527-1592; in Texas, (214) 272-3421. Circle 530 on inquiry card.

Computerize your bookkeeping without terrifying your bookkeeper.

Introducing The Boss.™ the most advanced, yet most understandable, financial accounting system. Designed to automate your bookkeeping without confusion or mistakes.

Typical screen format - actual photograph.

If "fear of the unknown" is standing between you and computerization, you should find out about The Boss.

The Boss system is immediately comprehensible to bookkeepers because it utilizes virtually the same format they're used to.

So even someone with no previous computer experience can easily learn and operate The Boss system.

Features seldom found in packaged software.

The Boss system is fully interactive, fully departmentalized and exceptionally fast. It can generate an astounding number of complex reports at the touch of a button.

General Ledger and Accounts Receivable and Payable transactions can be entered in any order in a single program.

Up-to-the-minute financial reports can be obtained without batch processing.

The Boss system computes financial ratio analysis.

It protects data from unauthorized personnel as well as computer malfunction.

And it has the largest programming and storage capacity of any micro system.

The Boss runs on most small business computers with CP/M® or similar operating systems. Its cost is only \$2,495.

Get full support from Lifeboat.

The Boss is brought to you exclusively and supported completely by Lifeboat Associates, world's largest computer software publisher. For more information about how you can profit from this extraordinary financial accounting system, send us the coupon below. Or call (212) 860-0300.

For more information on The Boss, mail coupon to Lifeboat Associates, 1651 Third Avenue, New York, NY 10028.

PERIPHERALS

Low-Cost Color-Graphics Terminal

RCA's VP-3301 is a microprocessor-controlled terminal with color graphics, reverse video, programmable and resident character sets, selectable data rates and formats, a flexible-membrane keyboard, and audio feedback. The VP-3301 can be connected to modems for communication with most timesharing and data-base computer networks. The software-selectable character-display

format can produce either 40 characters by 24 lines or 20 characters by 12 lines. Characters and background can be displayed in one of eight colors or gray scales. The communications interface is RS-232C or 20 mA current-loop. Configuration control includes line/local, uppercase only, full- and half-duplex, data-word formatting, plus two control-code options. The video output can be directly connected to monitors or, with an RF (radio frequency) modulator, to a television set. The suggested price for the VP-3301 is \$369 from RCA Microcomputer Products, New Holland Ave, Lancaster PA 17604, (717) 397-7661.

8-Inch Floppy-Disk Drives

Matchless Systems, 18444 S Broadway, Gardena CA 90248, (213) 327-1010, has announced the MS-800 8-inch floppy-disk drive. The drive is compatible with the TRS-80 Models I and II, the Apple II, and S-100 systems. The MS-800 has a capacity of 256 K bytes of storage. The data transfer rate is 256 k bps (bits per second) and the track-to-track access time is 10 ms. The prices range from \$995 to \$1595, which includes all hardware (such as the controller), software, and documentation. Circle 532 on inquiry card.

Series 47-TR Plotter

The Series 47-TR Strip Chart/Plotter is a curve tracer with alphanumeric capabilities. Its plotting area is 25 cm (10 inches) wide. The plotter features an RS-232C- or IEEE-488-compatible port and bidirectional paper drive. It requires two 8-bit words formatted to provide analog pen position. Pen speed is 75 cm per

second with a position accuracy of $\pm 0.15\%$, full scale. Paper can be incremented up to 2 cm per second at 0.0127 cm per step. The 47-TR is priced at \$945. For details, contact Pedersen Instruments, 2772 Camino Diablo, Walnut Creek CA 94596, (415) 937-3630.

Circle 534 on inquiry card.

S-100 I/O Board

The MFIO is an I/O (input/output) board designed for S-100 bus systems. It features four serial RS-232C ports with independent data rates of 50 to 19.2 k bps. It also includes 24 bits of parallel I/O configurable for four ports, five timer/counters, sixteen levels of vectored-interrupt control, and an optional battery-powered real-time clock/calendar. The MFIO costs \$595. For more information, contact Digicomp Research, Terrace Hill, Ithaca NY 14850, (607) 273-5900.

Circle 533 on inquiry card.

Graphics Terminal for the North Star

The Sigma 1042S high-resolution, memory-mapped graphics terminal is designed for the North Star microcomputer. The display provides a 640 by 800 dot matrix backed by a 64 K-byte display memory. The display memory is divided into sixteen 4 K-byte blocks, which are individually selectable for mapping onto a main-memory window of only 4 K bytes. The 1042S terminal can also be used as a word-processing work station. In this application mode, it includes variable spacing, multiple fonts, and scientific-character capabilities. Reverse video, blinking, and intensification are offered as hardware features. The terminal can be used as a system console under CP/M. The 1042S costs \$4000.

For more information, contact Sigma Information Systems USA Inc, 556 Trapelo Rd, Belmont MA 02178, (617) 484-2063.

Circle 535 on inquiry card.

Cash Register Scans Bar Code

The CE-1000 bar-code-scanning cash register can keep track of your entire inventory. It is designed for use with the Commodore CBM microcomputer and includes software, firmware, and hardware. The unit can read UPC (Universal Product Code) bar codes found on most products for point-of-sale operations, making it useful for convenience, liquor, food, record stores, and other small businesses.

The CE-1000 bar-code scanner costs \$1350. For more information, contact Creative Equipment, 50 NW 68 Ave, Miami FL 33126, (305) 261-7866.

Magazine for TI 99/4 Users

99'er Magazine is a bimonthly magazine with news about the TI 99/4 and other TMS9900-based personal-computer systems. It features tutorial articles, software, book and product reviews, opinions and news items, and a question-and-answer technical forum.

Each issue is divided into sections for education, games and simulations, home activities, and business, scientific, or professional applications. Regular features include columns on the Logo language, CAI (computer-aided instruction), speech-synthesis usage, interfacing with peripherals, computer chess, The Source and TEXNET, news from user groups, and lessons in programming techniques. Advertisements from suppliers of software, peripherals, and other related products and services are also included. A bulletin-board page for noncommercial messages is provided for its readers.

The subscription rate is \$15 for one year. Contact 99'er Magazine, Emerald Valley Publishing Company, 2715 Terrace View Dr, Eugene OR 97405, (503) 485-8796. Circle 540 on inquiry card.

GamesMaster Catalog

The GamesMaster Catalog has listings of board, computer, electronic, hand-held, fantasy, and other kinds of games. One section is exclusively devoted to Dungeons and Dragons-type games. Nearly 1000 games are described in full detail, including landscape sets and miniature pieces.

For a copy of the catalog, contact Boynton & Associates Inc, Clifton House, Clifton VA 22024, (703) 830-1000.

Computer Crimes Books

The Computer/Law Journal has published a two-volume set on computer crimes. This first volume contains an introduction by Senator Abraham Ribicoff, author of the Federal Computer Crimes Protection Act. There are articles by well-known scholars like Donn Parker, Susan Nycum, John Taber, Rob Kling, and Jay Becker.

Volume two has a history of the Stanley Mark Rifkin case and a compilation and analysis of all federal and state statutes and bills addressing computer crimes, as well as a case digest, bibliography, and book reviews. Both issues are available for \$16 each, plus \$1 per issue postage. Contact the Center for Computer/Law, 530 W 6th St, 10th floor, Los Angeles CA 90014.

1981 Computer-Science and Engineering Books

A catalog of MIT Press books in the computer-science and engineering fields is available. This catalog describes over fifty books. Most of the books are offered at a 20% discount through December 1981. Copies of the catalog can be obtained from The MIT Press, Promotion Department, 28 Carleton St, Cambridge MA 02142, (617) 253-5642.

What's New?

SOFTWARE

Merge Your 737 Printer and Scripsit

Until Apparat Inc introduced Flextext, TRS-80 Model I users could not use all of the features of the Centronics 737 printer (Radio Shack Line Printer IV) with Scripsit, Radio Shack's word-processing program. Flextext is a utility for Scripsit and the 737 printer that supports proportional or compressed character sets in normal and extended modes, right-justified formatting using the proportional or compressed character sets, underlining in any of the Scripsit-selectable formats and Flextext-selectable character sets, super- or subscripts, and the intermixing and combining of the 737's features anywhere in a document. Flextext requires at least one disk drive and a TRSDOS-type operating system. The program costs \$29.95 from Apparat Inc, 4401 S Tamarac, Denver CO 80237.

Circle 545 on inquiry card.

Chinese Lessons Program

Chinese greetings, times, seasons, numbers, foods, and other commonly used terms are contained in eleven computer-instruction lessons. Color, graphics, and sound are used in each lesson. Memory aids, meanings, and pronunciations are presented with the Chinese characters. The proper stroke sequence for each character is shown and can be repeated at the user's pace.

The Chinese lesson program is available for \$29.95 on a double-sided 5-inch floppy disk for the Apple II with 48 K bytes of programmable memory and a single disk drive. For details, contact Computer Translation Inc, Department BPI, POB 7004 University Sta, Provo UT 84602, (801) 224-1169. Circle 546 on inquiry card.

Utilities for the TRS-80 Color Computer

Mint Software's utilities for the Color Computer require 16 K bytes of memory. There are three cassette-based programming utilities available: Renumber, which provides the capability to load a program, renumber and save it; Squeeze, which will compress BASIC code to utilize minimum memory; and Merge, which allows two separate programs on cassette to be merged and saved. Other aids for cross-referencing line numbers and variables are available. The programs cost \$19.95. A 16 K-byte memory expansion is also available for \$70. Contact Mint Software, 6422 Peggy St, Baton Rouge LA 70808, (504) 766-2318.

Circle 547 on inquiry card.

DMADOS for 8080/Z80 Systems

DMADOS is a single-user, CP/M-compatible 8080 and Z80 disk operating system. It maintains up to sixteen user-defined passwords, allows files to be declared write-protected or invisible to the directory, and can function as a batched console processor. Using DMADOS, up to six print files can be sent to a background print task for printing. User-oriented prompting and error messages are provided.

DMADOS offers support for floppy- and hard-disk files of up to 4.2 megabytes. It is supplied with several utilities and a manual. DMADOS is available on 8-inch floppy disks or North Star double/quadruple-density formats. For more information on this \$200 operating system, contact John D Owens Associates Inc, 12 Schubert St, Staten Island NY 10305, (212) 448-6283.

Circle 548 on inquiry card.

Electronics Designers Program

Wiremaster is for small electronics companies with printed-circuit layout and wrapped-wire prototyping production problems. Connection data is derived from the schematic diagram and fed to Wiremaster in a CP/M text file. Outputs include a network map showing all pins and wires, a wire list sorted by lengths and levels, a parts list, and checklists that detect all wiring errors. The resulting information can then be used for printed-circuit-board layout, error checking, wiring, component stuffing, and system debugging.

Wiremaster comes on a single-density 8-inch CP/M floppy disk with a manual for \$150. It runs on Z80 and TRS-80 Model II CP/M systems with 48 K bytes of memory. Contact Afterthought Engineering, 7266 Courtney Dr, San Diego CA 92111, (714) 277-7863.

Circle 549 on inquiry card.

Dragonquest

In a race against the sun, you search for Smaegor, Monarch of Dragonfolk, who has kidnapped the Princess of the Realm and holds her in an unknown place. You must search the land, seeking the tools needed for the ultimate battle. On the river Delta and in the Temple of Baathteski, clues abound. But where is the Princess? This is the scenario of Dragonquest, an adventure game from The Programmer's Guild, POB 66, Peterborough NH 03458, (603) 924-6065. It runs on TRS-80 Model I microcomputers, and costs \$15.95 on cassette or \$21.95 on a floppy disk.

Voice Recognition for Z80 Systems

The Cognivox Model VIO-232 voice peripheral is designed for microcomputers using the Z80 microprocessor with a minimum-size programmable memory of 16 K bytes. The VIO-232 can be programmed to recognize words or short phrases from up to 32 entries, and it can answer with up to 32 words or short phrases. The

recognition and voice response vocabularies can be different, allowing a dialogue with the computer. Vocabularies larger than 32 words are possible. The Cognivox VIO-232 includes a microphone, power supply, amplifier, speaker, and manual. The price is \$149 from Voicetek, POB 388, Goleta CA 93116.

Circle 551 on inquiry card.

RS-232C-to-Current-Loop Adapter

The ADA400 is a bidirectional RS-232C-to-current-loop adapter, ideal for use with KIM-1 microcomputers. It allows the utilization of an RS-232C-interface terminal instead of a current-loop-interface teletypewriter. The ADA400 does not alter the data-transfer rate. It uses standard power supplies with low current requirements. The adapter can be modified to become an RS-232C-to-TTL (transistor-transistor logic) and TTL-to-RS-232C adapter. The ADA400 retails for \$24.50. More information can be obtained from Connecticut microComputer Inc, 34 Del Mar Dr, Brookfield CT 06804, (203) 775-4595.

Circle 552 on inquiry card.

Record-Retrieval System for PL/I-80

BT-80 is a single-user record-retrieval system based on the B-tree index-organization technique. BT-80 is useful in PL/I-80 applications where single- or multi-keyed access to data records is required. Its facilities can be accessed from PL/I-80 or assembly-language application programs. The system includes utilities that provide access to command-level functions.

BT-80 runs under the CP/M 2.0, MP/M, and CP/NET operating systems. To operate, BT-80 requires the PL/I-80 runtime library and LINK-80 linkage editor. For complete details, contact Digital Research, POB 579, 801 Lighthouse Ave, Pacific Grove CA 93950, (408) 649-3896. Circle 553 on inquiry card.

Battery Backup for the PET

Backpack is a battery backup system for the Commodore PET. It is designed for installation within the computer case. Backpack provides 6 to 10 minutes of full-power emergency backup to the computer (video display included) during power failures. The batteries are recharged from the computer's power supply. No special wiring is needed to install the device. Backpack comes assembled for \$225.

For more information, contact ETC Corporation, POB G, Apex NC 27502, (919) 362-4200.

Universal Development System

The UDS-1000 universal development system is a floppy-disk-based system that uses the 280 microprocessor. Various cross-assemblers for software development are supplied from a selection including the Texas Instruments TMS1000 and the TMS-1400 series; Rockwell R6500/1, MM75, -76, -77, and -78 series; Motorola 6800; Mostek 3870; Intel 8748, 8048; RCA 1802; NSC COP 420; OKI OLMS42; and other microprocessors. In addition to the cross-

assembler, a ROM (read-only memory) emulation board for prototype testing and an EPROM (erasable programmable ROM) programmer are included. The price of the system, including 64 K bytes of programmable memory, a 24-line by 80-character video terminal, an 80 cps (characters per second) printer, ROM emulation, and the EPROM programmer board, is \$8750. For information, contact Multitech Electronics Inc, 10322A N Stelling Rd, Cupertino CA 95014, (408) 252-4212.

Circle 557 on inquiry card.

Spelling Error Detection/Correction Package

Proof/it is a set of programs that scans the words in a text file and compares them with those in one or more dictionaries. Words that are not found are flagged as possible errors. Correctly spelled new words can be added automatically to the dictionary. Corrections can be directly substituted for incorrectly spelled words in the text file. A package including manual and software on a floppy disk with over 10,000 words in the dictionary is \$125. Software on a 5-megabyte hard-disk pack with over 30,000 words in the dictionary is \$100 more. The manual can be purchased separately for \$10.

Proof/it runs on Alpha Micro AM-100 computers with 32 K bytes of memory. For information, contact Datalab Inc, 617 E University, Suite 250, Ann Arbor MI 48104, (313) 995-0663.

Circle 559 on inquiry card.

16 K by 1-Bit Static Memory

The 2167 is a 16 K by 1-bit programmable static memory device from Intel. The 2167 can replace Intel's 2147 and 2141 static circuits. Compared to these devices, the 2167 has a greater density and lower power consumption. It also has a 55 ns access speed. The HMOS (high-performance metal-oxide semiconductor) device does not require clocking or

timing strobes. The 2167's inputs and outputs are TTL-compatible and are unlatched. Address setup and hold timings are not required.

Prices for the 2167 are \$68.55 per unit, in quantities of 100. For further details, contact Intel Corporation, 3585 SW 198th Ave, Aloha OR 97005, (503) 642-6344.

Circle 558 on inquiry card.

Daisy-Wheel Printer

The Starwriter letter-quality daisy-wheel printer runs at 25 cps. The Starwriter comes with a Centronics-compatible parallel interface, and uses Diablo ribbons and print wheels. The Starwriter has graphics capabilities and is code-compatible with Qume and Diablo printers. The printer accommodates paper widths of up to 38 cm (15 inches), and can make three copies. The Starwriter is available for \$1779 from Computer Textile Inc, 10960 Wilshire Blvd, Suite 1504, Los Angeles CA 90024, (213) 477-2196.

Memory Board for the SBC 86/12A

The CI-8086 memory board is designed for Intel's Intellec SBC 86/12A microcomputer. Available with 32 K to 512 K bytes on a single board (depending on what memory components are used), the module is compatible with 8- and 16-bit Multibus-based systems. The CI-8086 generates and checks even parity with selectable interrupt on parity error. It features a 250 ns data-access time and a 375 ns cycle time. The memory is addressable in 16 K-byte increments up to a total of 16 megabytes of memory. Power consumption is under 8 W. The price is \$1500 for the 128 K-byte

board and \$4700 for the 512 K-byte module. The CI-8086 is available from Chrislin Industries Inc, 31352 Via Colinas, #102,

Westlake Village CA 91361, (213) 991-2254.

Replace an 8080 with an 8085

A 50 to 250% throughput increase can be achieved with the Series II Microprocessor Enhancement Modules. These modules perform 8080A in-circuit emulation using a code-compatible 8085A-2 microprocessor. Installation requires less than five minutes, involving only the replacement of the system 8080A processor and status latch with connectors. The modules are offered for most 8080A products at \$350 in OEM (original equipment manufacturer) quantities. An Evaluation Design Pack is available for \$500. Contact Paragon Systems Inc, POB 2050, Corvallis OR 97330, (503) 758-1029.

Circle 562 on inquiry card.

12-Bit CMOS Converters

The DAC1218 and the DAC1219 are 12-bit CMOS (complementary metal-oxide semiconductor), 4-quadrant, multiplying, D/A (digital-to-analog) converters. The devices offer 12-bit monotonicity, maximum differential linearity error of ± 0.5 LSB (least significant bit), and feature a design technique resulting in TTL (transistor-transistor logic) compatibility. Power-supply voltages can range from +5 to +15 V; typical power consumption is 20 mW. The DAC1218 has a maximum linearity error specification of 0.012%, and the DAC1219 is rated at 0.024%.

In OEM quantities of 100, the DAC1218 sells for \$10.75 each, and the DAC1219 is priced at \$9.75 each. For additional information, contact National Semiconductor Corporation, 2900 Semiconductor Dr, Santa Clara CA 95051, (408) 737-5000.

Circle 563 on inquiry card.

Expand Atari's Memory

The RAMCRAM memory modules can expand the Atari 400's memory to 32 K bytes and the Atari 800's to 48 K. RAMCRAM plugs into the Atari internal memory-module slot, replacing the Atari's module. Each RAMCRAM module contains 32 K bytes of programmable memory. The suggested retail price is \$320.

An 8-slot bus-expansion board for the Atari and Apple microcomputers, with power supply, controller, and software, is available for further memory expansion. This memory-board bus can hold up to eight RAMCRAMs, offering 256 K bytes of programmable memory. Its suggested retail price is \$850.

For further details on both of these devices, contact Axlon Inc, 170 N Wolf Rd, Sunnyvale CA 94086, (408) 730-0216.

New Commodore VIC 20 Computer

Now Available

Introducing the first full-featured, expandable color computer priced under \$300!

Now, a new computer — the VIC 20 — offers a full range of special features and expansion capabilities which rival the features of existing microcomputers selling for 4 or 5 times as much!

The new VIC (Video Interface Computer) connects to any television set or monitor and provides 5K bytes of memory.

Check these outstanding features:

- **Color:** 8 character colors, 8 border colors, 16 screen colors
- **Sound:** 4 internal amplifiers including 3 tone (music) generators and 1 sound (noise & sound effects) generator. Each amplifier has 3 octaves. Sound uses a television or monitor speaker.
- **Memory:** 5K RAM (Random Access Memory) expandable externally to 32K RAM
- **Keyboard:** Full typewriter keyboard with special screen editing keys & PET graphics
- **Graphics:** Full PET keystroke graphics
- **Language:** PETBASIC
- **Programmable Function Keys:** 4 programmable function keys (8 separate functions)

- **Plug-In Program & Memory Expansion Cartridges:** (programs plug directly into the back of the computer...each program can be up to 27K)
- **Full Computer Accessories:** disk drive, printer, tape cassette, game controls & more
- **Connects to any TV set/monitor:** (Built-in RF Modulator)

A "User Friendly" Computer

The new VIC computer is designed to be the most *user friendly* computer on the market...friendly in price, friendly in size, friendly to use and expand.

With the VIC, Commodore is providing a computer system which helps almost anyone get involved in computing quickly and easily...with enough built-in expansion features to let the system "grow" with the user as his knowledge and requirements become more sophisticated.

Expansion Features & Peripherals

The VIC 20 is designed so a first time user can begin using it immediately with plug-in program cartridges, and build his system gradually as his needs (or budget) allow.

VIC system peripherals will include a tape cassette unit, single floppy disk drive, printer — and a broad range of add-on accessories which tailor the system to a variety of applications.

FREE with purchase the VIC 20 Personal Computer Manual. This User Manual is very unique as it is the most comprehensive manual ever written for a personal computer. The key ingredient is that no previous knowledge of programming or even typewriting is required. The manual is designed for the first-time owner along with extensive appendices for both the more experienced computerists and the beginners.

Eight Amp Power Supply for OEMs

The CEI Model FD503 is an 8 A power supply that provides outputs of +5 VDC at 8 A, +12 VDC at 2.5 A, -5 VDC at 1 A, -12 VDC at 0.5 A, and +24 VDC at 1.5 A continuous, 4 A surge. Floppy-disk drives can plug into the output connectors of the supply. The FD503 regulates positive outputs to 0.1% and negative outputs to 1%. Options include 100, 115, or 230 VAC power use; AC step-down for 115 V Shugart motors; and interconnecting cables. The CEI FD503 is priced at \$139 each in lots of 100. Contact CEI Corporation, POB 501, Grenier Industrial Park, Londonderry NH 03053, (603) 623-8888.

Circle 565 on inquiry card.

Universal Floppy-Disk-Controller Circuit

The TMS9909 floppy-disk-controller integrated circuit can control any floppy-disk drive while interfacing with any 8- or 16-bit microprocessor. It can read

from and write onto partial sectors, read from or write onto single or multiple sectors of hard- and soft-sectored disks, as well as simultaneously control 5- and 8-inch drives. The TMS9909 provides CRC (cyclic redundancy

check); data transfer rates of 125, 250, and 500 k bytes per second with one crystal; hard and soft formatting for 5- and 8-inch disks; and side selection for double-sided disks. Users can program the device for all major track parameters and various track-stepping, settling, and head-loading times. The TMS9909 supports single- and double-density formats on up to four drives. The TMS9909 has a memory-mapped microprocessor interface that supports an external DMA (direct memory access) interface. This allows designers to build only one interface for all floppy-disk formats.

For further details, contact Texas Instruments, Inquiry Answering Service, POB 25012, MS 308, Dallas TX 75265, attn: TMS9909.

KIT 3	DISK SYSTEM	15A	1A	2A	2A	4A	14" x 6" x 4 7/8"	67.95

DISK DRIVE POWER SUPPLY "R3" REGULATED, OPEN FRAME, ASSY. & TESTED 67.95

SPECS: + 5V @ 5A OVP, -5V @ 1A + 24V @ 5A, SHORTS PROTECT. 2 SIZES AVAILABLE: 1.) 9" (W) x 6 1/4" (D) x 4 7/8" (H). 2.) 9" (W) x 5 3/8" (D) x 5 1/4" (H).
OPTION: 1.) REPLACE + 24V BY + 12V. 2.) FOR SIZE 1 ONLY, ADD + 12V @ 1A, AT AN ADDITIONAL \$12.00.

IDEAL FOR THREE 8" or 5 1/4" FLOPPY DISK DRIVES, SUCH AS SHUGART 801/851, SIEMANS FDD 100-8/200-8 OR 100-5 ETC.

DISK SYSTEM PWR SUPPLY "S3" OPEN FRAME, ASSY. & TESTED. COMPACT SIZE: 10" (W) x 6" (D) x 5" (H) 92.95

REGULATED OUTPUTS FOR DISK DRIVES: +5V @ 4A, -5V @ 1A, +24V @ 4A (OR + 12V @ 4A), SHORTS PROTECT.
UNREGULATED OUTPUTS FOR S-100: +8V @ 14A, + 16V @ 3A. (OPTION: ADD OVP FOR +5V, ADD \$5.00)

A COMPLETE UNIT FOR DISK SYSTEM WITH THE MAINFRAME CONTAINING 12 SLOTS & TWO 8" or 5 1/4" DISK DRIVES.

POWER TRANSFORMERS (WITH MOUNTING BRACKETS)

MSM5832 MICROPROCESSOR \$745

REAL-TIME CLOCK
The MSM5832 is a monolithic metal-gate CMOS integrated circuit that functions as a real-time clock. Calendar for use in bus oriented microprocessor applications. The on-chip 32,768 Hz crystal controlled oscillator time base is counted down to provide addressable 4 bit I/O data of SECONDS, MINUTES, HOURS, DAY OF WEEK, MONTH and YEAR. Data access is controlled by 4 bit address. Chip select, read, write and hold inputs. Other functions include 12hr. 24hr. format select, hold year identification and manual 30 second correction.

JOHN BELL ENGINEERING'S 6502 AND Z80 MICROCOMPUTERS ARE DEDICATED COM- PUTERS DESIGNED FOR CONTROL FUNCTIONS.

THESE BOARDS FEATURE:

- 2048 BYTES EPROM
- 1024 BYTES RAM
- ALL BOARDS INCLUDE COMPLETE DOCUMENTATION
- 50 PIN CONNECTOR INCLUDED IN KITS AND ASSEMBLED UNITS
- 2716 AVAILABLE SEPARATELY

JOHN BELL ENGINEERING'S 6502 MICROCOMPUTER, 2716 EPROM PROGRAM- MER AND APPLE II PARALLEL INTERFACE PLUS THE APPLE II MICROCOMPUTER — A COMPLETE DEVELOPMENT SYSTEM.

6502 MICROCOMPUTER FEATURES:

- 1024 BYTES RAM
- 2048 BYTES EPROM
- USES ONE 6522 VIA (DOC. INCL.)
- 2 8 BIT BIDIRECTIONAL I/O PORTS
- 2 16 BIT PROGRAMMABLE TIMER/COUNTERS
- SERIAL DATA PORT
- LATCHED I/O WITH HANDSHAKING LOGIC
- TTL AND CMOS COMPATIBLE

\$79.95
KIT

USES 2716's

Blank PC Board - \$34

ASSEMBLED & TESTED
ADD \$30

SPECIAL: 2716 EPROM's (450 NS) Are \$9.95 Ea. With Above Kit.

KIT FEATURES:

1. Uses +5V only 2716 (2Kx8) EPROM's.
2. Allows up to 32K of software on line!
3. IEEE S-100 Compatible.
4. Addressable as two independent 16K blocks.
5. Cromemco extended or Northstar bank select.
6. On board wait state circuitry if needed.
7. Any or all EPROM locations can be disabled.
8. Double sided PC board, solder-masked, silk-screened.
9. Gold plated contact fingers.
10. Unselected EPROM's automatically powered down for low power.
11. Fully buffered and bypassed.
12. Easy and quick to assemble.

NEW! STEREO! S-100 SOUND COMPUTER BOARD NEW!

At last, an S-100 Board that unleashes the full power of two unbelievable General Instruments AY3-8910 NMOS computer sound IC's. Allows you under total computer control to generate an infinite number of special sound effects for games or any other program. Sounds can be called in BASIC, ASSEMBLY LANGUAGE, etc.

KIT FEATURES:

- * TWO GI SOUND COMPUTER IC'S.
- * FOUR PARALLEL I/O PORTS ON BOARD.
- * USES ON BOARD AUDIO AMPS OR YOUR STEREO.
- * ON BOARD PROTO TYPING AREA.
- * ALL SOCKETS, PARTS AND HARDWARE ARE INCLUDED.
- * PC BOARD IS SOLDERMASKED, SILK SCREENED, WITH GOLD CONTACTS.
- * EASY, QUICK, AND FUN TO BUILD. WITH FULL INSTRUCTIONS.
- * USES PROGRAMMED I/O FOR MAXIMUM SYSTEM FLEXIBILITY.

Both Basic and Assembly Language Programming examples are included.

SOFTWARE:

SCL™ is now available! Our Sound Command Language makes writing Sound Effects programs a SNAP! SCL™ also includes routines for Register-Examine-Modify, Memory-Examine-Modify, and Play-Memory. SCL™ is available on CP/M compatible diskette or 2708 or 2716. Diskette - \$24.95 2708 - \$19.95 2716 - \$29.95. Diskette includes the source. EPROM's are ORG at E000H.

ZEN is HERE

NORTH STAR SOFTWARE

SCREEN EDITOR DISK ASSEMBLER MONITOR

ZEN™ is an open program complete with source files and self assembly capabilities. It may be changed to any custom version you prefer. There are no secrets or locked-in formats. Features include very convenient screen and line editing with justification, choice of line and file sizes as well as the use of North Star key choices -- can be changed. A full list of the commands and features can not be written here but it has many conveniences not found in operating systems costing much more -- such as no line numbers, conditional and partial print assembly, some Basic utilities, and the best monitor ever designed for the micro-processor. -- all in ZEN™ itself. Need 24K min.

WIREMASTER

A COMPILER FOR HARDWARE

• WIREMASTER is a software tool to aid in the design, layout, and construction of electronic hardware. It is intended primarily for wire wrap, though it is also highly useful in the layout, error-checking, and trouble-shooting of IC boards.

• Inputs are easily derived directly from the schematic diagram and fed to WIREMASTER in a CP/M™ text file. Outputs include a network map that graphically shows all pins and wires, a wire list sorted by lengths and levels, a parts list, wrap count and continuity checklists, plus signal and pin cross-references.

• The resulting information is then used for IC board layouts, error-checking, wiring, component-stuffing, and system-debugging. This forms a complete and easily updated documentation package. Although it runs on small computers, WIREMASTER can handle large projects.

• WIREMASTER runs on any 2801 CP/M system of 47K or larger, including TRS 80 Model II and Apple with SoftCard.

FULL ELIZA FOR YOUR MICRO!

AT LAST! A FULL IMPLEMENTATION of the original ELIZA program is now available to run on your microcomputer! Created at MIT in 1966, ELIZA has become the world's most celebrated artificial intelligence demonstration program. ELIZA is a non-directive psychotherapist who analyzes each statement you type in and then responds with her own comment or question. Response time is virtually instantaneous and another remarkable feature is that she is designed to run on a large mainframe. ELIZA has hitherto been unavailable to small computer users except in greatly stripped down versions lacking the sophistication which made the original program so fascinating. Now, a new version possessing the full power and range of expression of the original is available to run on any CP/M based microcomputer system with at least 40K of RAM. Supplied as a 34K COM (machine language) file on a standard 8 inch diskette, the program is being offered for a limited time at the introductory price of only \$25. And if you want to find out how she does it or teach her to do more, we will include the complete Source Program, written in Microsoft BASIC, Version 5.0X, for only \$20 additional. Order your copy of ELIZA today and you'll never again wonder how to respond when one of your friends says, "Okay, let's see what this computer of yours can actually do!"

HERE IS AN ACTUAL SAMPLE OF ELIZA'S CONVERSATIONAL ABILITY:

(ELIZA'S comments are printed in capital letters)

All merrie alike.
In WHATWAY?
They're always buggin' us about something or other.
CAN YOU THINK OF A SPECIFIC EXAMPLE?
Well, my boyfriend made me come here.
YOUR BOYFRIEND MADE YOU COME HERE. - THAT'S INTERESTING.
I need some help, that much seems certain.
WHAT WOULD IT MEAN TO YOU IF YOU GOT SOME HELP?
Perhaps I could learn to get along with my mother.
TELL ME MORE ABOUT YOUR FAMILY.
You are like my father in some ways.
WHAT RESEMBLANCE DO YOU SEE?
You are afraid of me.
DOES IT PLEASE YOU TO BELIEVE I AM AFRAID OF YOU?
My father is afraid of everybody.
WHAT ELSE COMES TO MIND WHEN YOU THINK OF YOUR FATHER?
Bullets.
DOES THAT HAVE ANYTHING TO DO WITH THE FACT THAT
YOUR BOYFRIEND MADE YOU COME HERE?

NEED A LETTER QUALITY PRINTER BUT DON'T WANT TO PAY THE PRICE?

Then American Business Computers Has Just The Printer For You!

*Starwriter furnishes 3 clear
copies using a 96-character wheel.
It produces 136 printable columns.*

*The Starwriter accommodates
paper widths up to 381 mm (15").
It offers feeding continuous forms or
no-fold paper.*

**Call Us For A Price
That Will Pleasantly Surprise You**

*Operational front panel
switches, mounted on a PC board
with the status indicators, provide
Select, Line Feed, and Power-On
functions.*

The Starwriter Daisy Wheel Printer is designed to fill a distinct gap in the peripheral marketplace. A speed of 25 cps and its low price make it the ideal choice for today's systems designer interested in achieving superior price/performance ratios.

Incorporating the latest LSI technology, the Starwriter is built by one of the world's most respected computer peripheral manufacturers. The printer is furnished complete and ready-to-use, requiring no changes in hardware or software. Starwriter offers an industry standard parallel interface, as well as RS232-C interface. Total plug compatibility and a wide variety of interface matching capabilities help lower the system integration costs for OEMs and end-users.

Using a 96-character wheel, the Starwriter produces letter-quality printing on 3 sharp copies with up to 136 columns. Starwriter offers the highest degree of vertical and horizontal positioning, resulting in the most precise character placement in the industry. The easy-to-change character wheel also makes our printer a perfect choice for international applications. Compatible with sheet feeders, starwriter accommodates paper widths to 381 mm (15") and uses industry standard ribbon cartridges.

Along with a self-test capability and a programmable VFU (Vertical Format Unit), Starwriter furnishes the operator with all desirable status functions, commands and program selectable switches. Panel lamps indicate the current Paper, Select and Power status.

The easy plug-in compatibility of Starwriter and its outstanding print performance makes the Starwriter perfect for TRS-80*, Apple*, and S-100 users.

Starwriter is backed up by a one-year warranty (3 months on parts and labor, 9 succeeding months on parts) and is further supported by a strong, fully trained and technically proficient service organization. The Starwriter is available for immediate shipment in any quantity desired.

Desk Top Computer

This unit is a computerized Electronic Secretary. It keeps time, date, calendar, message, and meeting files. Originally sold thru a major mail order house for over \$450.

Technically, it's a 6507 MICRO, ROM, RAM, Panaplex Alpha Display, Ni-Cad battery, Power Supply, Keyboard, Wood and Aluminum Case with Schematic and operating instructions.

Most of these Computers are warranty returns. We are offering Refurbished, like new, units for \$99.95 and AS IS (most have minor problems) units for \$44.95. Add \$4.95 for shipping and handling. All units are complete as described. All sales are final. California Residents add 6.5% sales tax.

Send Payment with order or call our Order Line 408-272-2320 and use your MC or VISA card.

SINGLE-BOARD VERSATILITY!

The New
BASYS/1
can:

- directly drive motors and solenoids
- operate for weeks on a few flashlight batteries
- work reliably from -40 to +85°C.
- monitor 80 keys and drive 10-digit LED displays
- fit in a 4.5 x 6.5 x 1" space

...and a lot more. BASYS/1 is a CMOS single board computer for real-world control applications. It contains a COSMAC 1802 CPU, up to 2K RAM, 8K ROM, and versatile serial, parallel, and multiplexed I/O. ROM monitor supplied for machine language programming, or order optional Integer BASIC or 8TH (our version of FORTH). Expansion boards also available.

BASYS/1 with 1K RAM, .5K ROM. Kit \$185, assembled \$220

SHUGART SA800/1

Your Choice 115V. 60Hz or 230V. 50Hz.

These Shugart eight inch disk drives were originally purchased by major computer manufacturers. Upon failing incoming inspection the drives were sent back to Shugart for realignment.

California Digital has negotiated an extremely attractive agreement to purchase the entire inventory of the SA800's. We are offering the drives on a first come basis at only \$295. (Subject to remaining inventory on hand.) Installation manual \$10 additional. Warranty 30 days from date of receipt. NOTE: The SA800/1 is standard mount and not the "R" suffix rack mount unit.

SPC-800/115 or SPC-800/230 16 Lbs.

Shugart Associates

\$395
801/ R Disk Drive 15 lbs.

Shugart 801/R with CP-206 power supply, muffin exhaust fan, complete in dual enclosure with all the necessary harnessing cables. Documentation included. 35 pounds. MSD-1901
Same as above but with two Shugart 801R disk drives. 50 pounds. MSD-2001
Disk drive cable. 6 feet 30 conductor with edge card connector at both ends. WCA-650S \$25.00
Export disk drives. 220V. 50MHz add \$50.00 per disk drive.

\$795 \$1195

NEW from

Shugart Technology

5

Megabyte

Hard Disk Drive

Packaged in the same physical size as the industry standard 5 1/4" minifloppy disk drive. The micro-Winchester stores thirty times as much data (6.38 megabytes unformatted), accesses data twice as fast (170 milliseconds) and transfers data twenty times faster (5.0 megabits per second.)

The ST506 is factory sealed to protect the media from environmental contaminants. Requires only DC voltage.

Dual California Digital 5 1/4" enclosure. **\$1500**

ST506 drive and power supply.

Shugart Associates SA400 removable **\$300**

media disk drive for above package. add: S-100 & Apple controller scheduled for spring release.

for spring release.

All merchandise sold by California Digital is premium grade. Shipping: First five pounds \$2.00; each additional add \$4.00 Foreign orders 10% shipping. Excess will be refunded. California residents add 6% sales tax. COD's discouraged. Open accounts extended to state supported educational institutions and companies with a "Strong Dun & Bradstreet." Warehouse: 15608 Inglewood Blvd. Visitors by appointment.

MEMOREX
8" DISKETTES
\$25 WITH FREE LIBRARY CASE

Recently the Memorex Corporation had a concession on a contract for a truck load of eight inch diskettes. California Digital was fortunate to be offered this load of prime magnetic media.

These diskettes are "UNBRANDABLE" but are guaranteed first quality Memorex Brand. (#3060 single den.) Like all diskettes sold by California Digital, a library case is supplied free with the purchase of every box. This offer is subject to remaining inventory on hand.

World's Best Selling Printer

EPSON MX80

Immediate Delivery

Only \$475

Correspondence quality printing. A lot of printers costing a lot more can't touch the MX-80's performance. It gives you a choice of 40, 80, 66 or 132 columns of printing in as many as four distinct printing density modes, a total of twelve different combinations which can accommodate nearly any printing requirement.

Bi-directional printing. Logical seeking of shortest lines. 80 CPS. 64 graphics characters. Forms handling. The list of standard features goes on and on. The fact is that there are few printers that can compete with the MX-80 at ANY price. And none — ZERO — in its extraordinarily affordable price range.

NEW
from
INTEGRAL DATA
Paper Tiger
with
GRAPHICS \$1150

The 460 Paper Tiger uses a dot matrix character formation technique in which the placement of the dots overlap both horizontally and vertically to achieve a correspondence quality printing.

The printer's nine-wire print head uses staggered needle rows to create the vertically overlapping dots. The head is driven bi-directionally under microprocessor control by a stepper motor driven mechanism.

"Two K" buffer allows the printer to accept the entire content of a 1,920 character CRT screen. With graphics suggested retail price \$1,395. 27 lbs. PRG-460G

NEC Spinwriter
5510 P/S
\$2795

The word processing quality Spinwriter prints at speeds up to 55 characters per second. The Model 5510 P/S is supplied with both parallel and RS-232 serial interfaces. Also included is the tractor feed mechanism, along with print daisy and ribbon. P/N: 5510 P/S 70 lbs. Keyboard (HSR) Model 5520 P/S available \$2995. P/N: 5520 P/S 75 lbs.

TEC V-300
Word Processing
Daisy Wheel Printer
\$1595

Finally a reasonably priced letter quality printer... bi-directional printing at 25 characters per second. Full 136 print positions wide. Proportional spacing 1/120" horizontal, 1/48" vertical.

Uses standard Diablo brand interchangeable daisy print wheels. Intel 8085 CPU microprocessor controlled. Interfaces via Centronics parallel connector. Shipping 56 lbs. PRV-300.

Accessories for Apple

16K MEMORY UPGRADE

Add 16K of RAM to your TRS-80, Apple, or Exidy in just minutes. We've sold thousands of these 16K RAM upgrades which include the appropriate memory chips (as specified by the manufacturer), all necessary jumper blocks, fool-proof instructions, and our 1 year guarantee.

MEX-16100K TRS-80 kit \$29.00
MEX-16101K Apple kit \$29.00
MEX-16102K Exidy kit \$29.00

16K RAM Card - Microsoft

(There is life after 48K)

MEX-16300A A & T \$174.95

Z-80* CARD for APPLE

Two computers in one, Z-80 & 6502, more than doubles the power & potential of your Apple, includes Z-80* CPU card, CP/M 2.2, & BASIC-80

CPX-30800A A & T \$279.95

Atari 800 \$799.95

APPLE CLOCK - Cal Comp Sys

Real time clock w/battery back-up

IOK-2030A A & T \$109.95

APPLE STICK - Micromate

Joy stick with pots for Apple II

SYA-1510A A & T \$49.95

VISCALC - Personal Sftwr

The ultimate program for your Apple II

SFA-24101005M Complete package \$139.95

DOS 3.3 UPGRADE - Apple

Upgrade your old DOS to the improved 3.3

IOD-2233A Complete kit \$64.95

DISK DRIVE for APPLE

5 1/4" disk drive with controller for your Apple

MSM-12310C with controller \$475.00
MSM-123101 w/out controller \$375.00

8" DRIVES for APPLE

Controller, DOS, two 8" double density drives, cabinet, power supply, & cables

Special Package Price Kit \$1399.95

PRINTER INTERFACE - C.C.S.

Centronics type I/O card w/ firmware

IOI-2041A A & T \$99.95

AIO, ASIO, APIO - S.S.M.

Parallel & serial interface for your Apple (see Byte pg 11)

IOI-2050K Par & Ser kit \$129.95
IOI-2050A Par & Ser A & T \$159.95
IOI-2052K Serial kit \$89.95
IOI-2052A Serial A & T \$99.95
IOI-2054K Parallel kit \$69.95
IOI-2054A Parallel A & T \$89.95

A488 - S.S.M.

IEEE 488 controller, uses simple basic commands, includes firmware and cable, 1 year guarantee, (see April Byte pg 11)

IOX-7488A A & T \$399.95

Disk Drives

JADE's new dual disk sub-assemblies include: Handsome metal cabinet with proportionally balanced air flow system, assembled & tested dual drive power supply, quiet whisper type cooling fan, power-cable kit, lighted power switch, approved fuse assembly, line cord, Never-Mar rubber feet, and all necessary hardware to mount 2-8" disk drives - it's all American made, guaranteed for six months, and it's in stock!

Dual 8" Sub-Assembly Cabinet

END-000421 Cabinet kit \$225.00
END-000420 Bare cabinet \$59.95

Single sided, double density disk drive sub-system
END-000423 Kit w/2 8" drives \$975.00
END-000424 A & T w/2 8" drives \$1195.00

Double sided, double density disk drive sub-system
END-000426 kit w/2 8" drives \$1495.00
END-000427 A & T w/2 8" drives \$1695.00

8" DISK DRIVES

Highly reliable double density floppy disk drives

Shugart 801R single sided, double density

MSF-10801R SA-801R \$425.00
Special Sale Price 2 for \$790.00

Shugart 851R double sided, double density

MSF-10851R SA-851R \$595.00

MMD-8220103 Soft sector \$49.95

Video Monitors

13" COLOR MONITOR - Zenith

The hi res color you've been promising yourself

VDC-201301 \$449.00

12" GREEN SCREEN - NEC

20 MHz, P31 phosphor video monitor with audio, exceptionally high resolution - A fantastic monitor at a very reasonable price

VDM-651200 12" monitor \$259.95

Leedex / Amdek

Reasonably priced video monitors

VDM-801210 Video 100 12" B&W .. \$149.95

VDM-801230 Video 100-80 12" B&W \$189.95

VDM-801250 12" Green Phosphor ... \$189.95

VDC-801310 13" Color I \$399.95

Fast Service.

S-100 CPU

CB-2 Z-80 CPU - S.S.M.

2 or 4 MHz Z-80 CPU board with provision for up to 8K of ROM or 4K of RAM on board, extended addressing, IEEE S-100, front panel compatible.

CPU-30300K Kit \$239.95
CPU-30300A A & T \$299.95

THE BIG Z* - Jade

2 or 4 MHz switchable Z-80* CPU with serial I/O, accommodates 2708, 2716, or 2732 EPROM, baud rates from 75 to 9600

CPU-30201K Kit \$145.00
CPU-30201A A & T \$199.00
CPU-30200B Bare board \$35.00

2810 Z-80* CPU - Cal Comp Sys

2/4 MHz Z-80A* CPU with RS-232C serial I/O port and on-board MOSS 2.2 monitor PROM. front panel compatible.

CPU-30400A A & T \$269.95

SBC-200 - SD Systems

4 MHz Z-80* CPU with serial & parallel I/O ports, up to 8K of on-board PROM, software programmable baud rate generator, 1K of on-board RAM, Z-80 CTC.

CPC-30200K Kit \$339.95
CPC-30200A Jade A & T \$399.95

S-100 I/O

I/O-4 - S.S.M.

2 serial I/O ports plus 2 parallel I/O ports

IOI-1010K Kit \$159.95
IOI-1010A A & T \$219.95
IOI-1010B Bare board \$35.00

S.P.I.C. - Jade

Our new I/O card with 2 SIO's, 4 CTC's, and 1 PIO

IOI-1045K 2 CTC's, 1 SIO, 1 PIO .. \$199.00
IOI-1045A A & T \$259.00
IOI-1046K 4 CTC's, 2 SIO's, 1 PIO .. \$259.00
IOI-1046A A & T \$319.00
IOI-1045B Bare board w/ manual ... \$59.95
IOI-1045D Manual only \$20.00

Motherboards

ISO-BUS - Jade

Silent, simple, and on sale - a better motherboard

6 Slot (5 1/4" x 8 3/4")

MBS-061B Bare board \$19.95
MBS-061K Kit \$39.95
MBS-061A A & T \$49.95

12 Slot (9 1/4" x 8 3/4")

MBS-121B Bare board \$29.95
MBS-121K Kit \$69.95
MBS-121A A & T \$89.95

18 Slot (14 1/2" x 8 3/4")

MBS-181B Bare board \$49.95
MBS-181K Kit \$99.95
MBS-181A A & T \$139.95

S-100 Memory

EXPANDORAM II - S D Systems

4 MHz RAM board expandable from 16K to 64K

MEM-16630K 16K kit \$275.95
MEM-32631K 32K kit \$295.95
MEM-48632K 48K kit \$315.95
MEM-64633K 64K kit \$335.95
Assembled & tested add \$50.00

64K RAM - Calif Computer Sys

4 MHz bank port / bank byte selectable, extended addressing, 16K bank selectable, PHANTOM line allows memory overlay, 8080 / Z-80 / front panel compatible.

MEM-64565A A & T \$575.00

MEMORY BANK - Jade

4 MHz, IEEE S-100, bank selectable, 8 or 16 bit, expandable from 16K to 256K

MEM-99730B Bare board \$55.00
MEM-99730K Kit, no RAM \$219.95
MEM-16730K 16K kit \$249.95
MEM-32731K 32K kit \$289.95
MEM-48732K 48K kit \$324.95
MEM-64733K 64K kit \$359.95
Assembled & tested add \$50.00

32K STATIC RAM - Jade

2 or 4 MHz expandable static RAM board uses 2114L's

MEM-16151K 16K 4 MHz kit \$169.95
MEM-32151K 32K 4 MHz kit \$299.95
Assembled & tested add \$50.00

16K STATIC RAM - Cal Comp Sys

2 or 4 MHz 16K static RAM board, IEEE S-100, bank selectable, Phantom capability, addressable in 4K blocks

MEM-16160A 16K 2 MHz A & T ... \$286.95
MEM-16162A 16K 4 MHz A & T ... \$289.95
MEM-16160B Bare board \$50.00

S-100 PROM Boards

PB-1 - S.S.M.

2708, 2716 EPROM board with built-in programmer

MEM-99510K Kit \$139.95
MEM-99510A A & T \$199.95

PROM-100 - SD Systems

2708, 2716, 2732, 2758, & 2516 EPROM programmer

MEM-99520K Kit \$219.95
MEM-99520A Jade A & T \$269.95

EPROM BOARD - Jade

16K or 32K uses 2708's or 2716's, 1K boundary

MEM-16230K Kit \$79.95
MEM-16230A A & T \$119.95

Mainframes

MAINFRAME - Cal Comp Sys

12 slot S-100 mainframe with 20 amp power supply

ENC-112106 A & T \$429.95

S-100 Disk Controller

DOUBLE-D - Jade

Double density controller with the inside track, on-board Z-80A*, printer port, IEEE S-100, can function on an interrupt driven buss

IOD-1200K Kit \$299.95
IOD-1200A 8" A & T \$389.95
IOD-1205A 5 1/4" A & T \$389.95
IOD-1200B Bare board \$65.00

DOUBLE DENSITY - Cal Comp Sys

5 1/4" and 8" disk controller, single or double density, with on-board boot loader ROM, and free CP/M 2.2* and manual set.

IOD-1300A A & T \$369.95

VERSAFLOPPY II - SD Systems

New double density controller for both 8" & 5 1/4"

IOD-1160K Kit \$339.95
IOD-1160A A & T \$379.95

S-100 Video

VB-3 - S.S.M.

80 characters x 24 lines expandable to 80 x 48 for a full page of text, upper & lower case, 256 user defined symbols, 160 x 192 graphics matrix, memory mapped, has key board input.

IOV-1095K 4 MHz kit \$345.00
IOV-1095A 4 MHz A & T \$395.95
IOV-1096K 80 x 48 upgrade \$39.95

VDB-8024 - SD Systems

80 x 24 I/O mapped video board with keyboard I/O, and on-board Z-80A*.

IOV-1020K Kit \$399.95
IOV-1020A Jade A & T \$459.95

VIDEO BOARD - Jade

64 characters x 16 lines, 7 x 9 dot matrix, full upper/lower case ASCII character set, numbers, symbols, and greek letters, normal/reverse/blinking video, S-100.

IOV-1050K Kit \$99.95
IOV-1050A A & T \$125.00
IOV-1050B Bare board \$29.95

2114L Low Power 4MHz

1 - 19	20 - 99	100 or more
\$3.35	\$2.99	\$2.50

FITS GTE HANDSETS!

2 YEAR WARRANTY

EXCLUSIVE ACOUSTIC CHAMBERS

The exclusive triple seal of Livermore's new flat mounted cups locks the handset into the acoustic chamber yielding superior acoustic isolation and mechanical cushioning. Designed to adapt to most common handsets used throughout the world, the STAR offers the utmost in flexibility and transmission reliability.

Specifications:

- Data Rate: 0 to 300 baud
- Compatibility: Bell 103 and 113; CCITT
- Frequency Stability: ± 0.3 percent. Crystal controlled
- Receiver Sensitivity: -50 dBm ON, -53 dBm OFF
- Modulation: Frequency shift keyed (FSK)
- Carrier Detect Delay: 1.2 seconds ON; 120 msec OFF
- EIA Terminal Interface: Compatible with RS 232 specifications
- Teletype Interface: 20 milliamper current loop
- Optional Interfaces: IEEE 488; TTL; TTY 43
- International (CCITT) frequencies available
- Switches: Originate/Off/Answer; Full Duplex/Test/Half Duplex
- Indicators: Transmit Data, Receive Data, Carrier Ready, Test
- Power: Supplied by 24 VAC/150 MA UL/CSA listed wall-mount transformer. Input 115 VAC, 2.5 watts. (A 220 VAC, 50 Hz adaptor is available upon request.)
- Dimensions: $10'' \times 4'' \times 2''$
- Weight: 1.74 lbs. (3 lbs. shipping weight including AC adaptor.)
- Warranty: Two years on parts and labor, excluding the AC adaptor which carries the manufacturer's warranty

PB1 2708/2716 PROGRAMMER & 4K/8K EPROM BOARD

PB1 has two separate programming circuits so 2708 or 2716 (5v) type of EPROMs can be programmed without modifying the board. Programming voltage is generated on-board; no need for an external power supply. Programming sockets are Dip Switch addressable to any 4K boundary. And complete software is provided for programming and verifying EPROMs.

Unused EPROM sockets don't take memory space, so you are never committed to the full 4K or 8K of memory.

SPECIFICATIONS

Memory capacity: 4096/8192 bytes (four sockets)
Memory type: 2708 EPROM (not included)
2716 EPROM + 5V type (not included)

Addressing:
EPROM programmer: Any 4K boundary
On-board: Separate 2708 and 2716 sockets
EPROMs: Dip switch selection
Unused sockets do not enable data bus drive
Wait states: 0 to 4 clock cycles
Buffering: All lines buffered
Special feature: LED indicator for programming mode
Switch to turn-off programming voltage prevents accidental ROM programming
Textool sockets (for programming only)

SSMPB1A	Assembled & Tested	\$265.00	\$179.00

MB8A 1K/16K EPROM BOARD

The MB8A provides sockets to support up to 16 2708 EPROMs—the most widely used EPROM in the microcomputer industry. The board disables in 1K increments simply by removing the 1K EPROMs. For example, with 8 EPROMs, it acts as an 8K board.

The MB8A's Magic Mapping enables the user to overlay RAM and ROM at the same address in any desired increment when used with RAM boards equipped with Phantom Disable.

INTERFACE I 2 Serial

Our I/O board gives you unparalleled flexibility and operating convenience. We include such features as:

- 2 independently addressable serial ports (dip switch selectable addresses)
- Real LSI Hardware UARTs for minimum CPU housekeeping.
- RS232C, current loop (20mA), & TTL signals on both ports.
- Precision, crystal-controlled Baud rates up to 19.1 Kbaud (individually dip switch selectable)
- Transmit & receive interrupts on both channels, jumperable to any vectored interrupt line.
- Industry standard RS232 level converters with five RS232 handshaking lines per port.
- Optically isolated current loop with provisions for both on-board & off-board current sources.
- UART parameters, interrupt enables, & RS 232 handshaking lines are software programmable with power-on hardware default to customer specified hard-wired settings for maximum flexibility.

	List Price	Our Price

INTERFACER II 3P/1S

- 1 independently addressable serial port
- RS232C: 20mA current loop, & TTL signals
- Precision crystal controlled Baud rate generator
- Up to 19.2K Baud
- Transmit and receive interrupts, jumperable to and vectored interrupt line
- Five RS232 handshaking lines
- Optically isolated current loop
- 3 parallel I/O
- Utilizes LS TTL octal latches for latched I/O data with 24mA drive current
- Enable & strobe bits on each port (each with selectable polarity)
- Interrupts for each input port
- Separate 25 pin connector with power for each channel and a status port for interrupt mask & port status

SYSTEM SUPPORT 1 MULTIFUNCTION BOARD

This multi-purpose S-100 board provides your computer with the most needed system support functions - at less cost than buying numerous single function boards. Includes sockets for 4K of extended address EPROM or RAM (2716 pinout), 1 socket with battery backup; crystal controlled month/day/year/time clock with BCD outputs; optional high speed math processor (9511 or 9512); full RS-232 serial port; three 16 bit interval timers (cascade or use independently); two interrupt controllers service 15 levels of interrupts; power fail indicator with provision to switch CMOS memory to battery backup; and comprehensive owner's manual with numerous software examples. Conforms fully to all IEEE 696/S-100 standards.

Want to make your S-100 system more versatile? System Support 1 is the answer.

- 4K of EPROM or RAM (2716 type).
- 15 levels of vectored interrupts.
- 3 independent 16 bit interval timers.
- Real time clock/calendar with battery backup capability
- Full RS-232C serial port with software selectable baud rate.
- Optional high speed math processor (9511 or 9512, your choice).
- 1, 2, 4 or 8 wait states selectable to accommodate the fastest CPUs.
- ROM/RAM can be enabled or disabled by PHANTOM.
- ROM/RAM can respond to full IEEE extended address (24 bits).

VB3 80 Character Video Board

VB3 is the perfect video interface for word processing and other applications requiring 80 characters per line. It produces a standard 80 x 24 display or as much as 80 x 48 for a full page of text. VB3 can display upper and lower case characters, up to 256 user defined symbols, and a 160 x 192 matrix for graphics.

VB3 is memory mapped, but occupies memory only when activated. So one or more VB3s can be located at the same address with a full 65K of memory still available to the user.

It generates both US and European T.V. rates and includes a keyboard input. Software includes a CP/M compatible driver routine.

SPECIFICATIONS:

Display - 80 char. per line, up to 48 lines • Graphics up to 160 x 192 matrix • Upper & lower case characters • Up to 256 user defined symbols (optional EPROM) • Software controlled options: Inverted video, graphic char. (2x4), 1 level of gray, blinking char., underline, strike thru, blank-out char., cursor.

Timing - Software controlled timing, top & bottom margins, horiz. position • U.S. & European T.V. timing • Full interface or non-interface • Crystal—16 MHz (dot rate)

Interface - Composite video, =75 OHM • Vert./horiz. drive output & sync input • Memory mapped

Keyboard - Keyboard port with status • Dip switch addressing of ports

On-board RAM - 4096 Bytes (8192 bytes optional) • 2114L (250 nsec or 450 nsec) • Switch addressing, 8K increments • On-board bank-select of RAM

Buffering - All lines buffered
Software - CP/M compatible driver routine • Powerful terminal simulator routine

VB1C Memory Mapped Video Board

One of the most popular S-100 video boards available, this VB1C is software controlled and memory mapped. Memory Mapping means that locations in the 1K (1024 byte) on-board RAM memory correspond with locations in the 64 x 16 (1024) character display.

The 1K memory can be addressed at any 1K increment via DIP switch.

The VB1C features a 128 x 48 matrix for graphics upper and lower case, Greek letters, and black on white or white on black. Software includes a driver routine for cursor control, scroll-up, and X-Y graphic control.

	List Price	SALE PRICE

SSM-VB1CA A&T	\$242.00	\$205.00

VB2 I/O Mapped Video Board

The VB2, is an I/O controlled video interface board. With a TV monitor, the VB2 becomes a video terminal. No other I/O card is required for keyboard input and video display.

The VB2 cursor, linefeed, carriage return, backspace, and clear-screen are hardware controlled. The display is 64 x 16, all upper case, and is selectable for white on black, or black on white. The board produces a clear, bright display, and features adjustable picture size and character width. Circuitry is provided to drive a speaker for a tone.

SCOPE SALE

OUR LOWEST PRICES
OF THE YEAR!

Single and dual trace, 15 thru 100 MHz. All high sensitivity Hitachi oscilloscopes are built to demanding Hitachi quality standards and are backed by a 2-year warranty. They're able to measure signals as low as 1mV/division (with X5 vertical magnifier). It's a specification you won't find on any other 15 or 30 MHz scopes. Plus: Z-axis modulation, trace rotation, front panel X-Y operation for all scope models, and X10 sweep magnification. And, 30 thru 100 MHz oscilloscopes offer internal signal delay lines. For ease of operation, functionally-related controls are grouped into three blocks on the color coded front panel. Now here's the clincher: For what you'd expect to pay more, you actually pay less. Check our scopes before you decide. All scopes complete with probes.

Hitachi...The measure of quality.
HITV302B

30MHz DUAL TRACE OSCILLOSCOPE
List \$995.00
SALE \$819.00

- TV sync-separator circuit
- High-sensitivity 1mV/div (5MHz)
- Sweep-time magnifier (10 times)
- Z-axis input (Intensity modulation)
- Signal delay line
- Complete with 2 probes
- CH1, CH2, DUAL, ADD, DIFF, Vertical Deflection Modes
- X-Y operation
- Trace Rotation

LIST \$735.00 **SALE \$629.00**

HIT-V202 20MHz DUAL TRACE
LIST PRICE: \$850
SALE PRICE: \$775.00

- Dynamic range 8 div.
- TV sync-separator circuit
- Built-in signal delay line (V-352)
- X-Y operation
- Sweep-time magnifier (10 times)
- Trace rotation system
- Fine-adjusting, click-positioning function

HIT-V352 35MHz DUAL TRACE WITH DELAY
LIST PRICE: \$1150.00
SALE PRICE \$950.00

- Economically priced dual trace oscilloscope
- Square CRT with internal graticule (illuminated scale)
- High-accuracy voltage axis & time axis set at $\pm 3\%$ (certified at 10° to 35°C)
- High-sensitivity 1mV/div.
- Low drift
- 2 Year Warranty

50MHz & 100 MHz
DUAL TRACE WITH
CALIBRATED TIME DELAY

HIT V550B 50MHz with 3rd TRACE TRIGGER VIEW
LIST \$1745.00
SALE \$1495.00

HIT V1050 100MHz with 3rd & 4th TRACE TRIGGER VIEW
LIST \$2390.00
SALE \$1995.00

The HITACHI V550B (50MHz) and V1050 (100MHz) offer all the capabilities you might expect from a lab grade oscilloscope. Capabilities such as 3rd trace trigger view, a bright 6" square CRT, and a max. sweep rate of 2ns/div (V1050) 5ns/div (V550B). Also, features you may not expect like, sensitivity of 1mV/div (V550B) .5mV/div (V1050) @ 10MHz, automatic focus correction.

MORROW DESIGNS

DISCUS/2D™
DOUBLE DENSITY DISK SYSTEM

COMPLETE WITH
CP/M V2.2 AND
MICROSOFT BASIC V5.2

Why not go all the way to the professional/industrial standard of 600K byte/side disk memory with your S-100 system? The new DISCUS/2D™ full-size, double-density floppy disk system is actually less expensive than many mini-floppy systems.

And Morrow Designs TM hasn't just made full-size, double-density disk memory affordable...we've made it more functional.

The data format is soft-sectored and compatible with IBM's new System 34. And DISCUS/2D™ accepts both single-density and double-density disks for complete flexibility in data storage.

And DISCUS/2D™ is even more attractive because it's priced and delivered as a truly complete system. It's complete with all hardware. It's complete with all necessary software. And it's completely assembled, tested and warranted.

Specifications:

- CP/M V2.2 and Microsoft Basic V5.2 Standard
- Plug compatible with Shugart, Remex and Siemens single- or double-sided drives
- Double/single-density capability utilizing MFM and FM data formats
- Western Digital 1791 LSI floppy disk controller chip
- Uses 2K of S-100 address space:
 - 1K PROM with built-in disk drive and I/O utility subroutines incorporating memory mapped I/O
 - 1K 2114-3L 300 ns access time RAM for disk data offering and general purpose use
- Starting address of memory space is 340:000 (E000 hex) for compatibility with other popular ROM based systems
- Phase-locked data separator and crystal controlled disk data write precompensation capability to insure the highest standards of data integrity in double density mode.
- Compatible with all 2, 4 and 5 MHz systems which conform with the proposed IEEE standard for the S-100 bus
- 1602 UART with crystal-controlled baud-rate generator
- Sixteen switch selectable baud rates from 50 to 19,200 bits/second
- TTY current loop and industry standard RS232C serial interface
- Power-on/jump circuitry for automatic bootstrap loading from the disk drive
- Power supply requirements: + 8V @ 1200 ma; + 16V @ 150 ma; -16V @ 70 ma.

• ROM utility subroutines:

Bootstrap load	Seek
Terminal input	Set sector
Terminal output	Set DMA address
Horne	Disk read
Disk write	DMA status
Select drive	Disk status
Terminal panic detect	Disk error
Terminal status	Switch density

ECONORAM 17 64K STATIC S-100 MEMORY

For critical high density applications where dynamic memory poses possible problems with DMA or speed, the Godbout RAM 17 64K STATIC RAM board represents the long awaited solution. Conforming fully to the IEEE 696/S-100 bus standard, RAM 17 provides 24 address lines for 16 megabytes extended addressing capability, and runs on far less power than dynamic memory.

- Meets or exceeds all IEEE 696/S-100 specifications
- Fully static design uses less power than dynamics (2W)
- 24 bit extended addressing
- 2K Window at E000, E800, F000, or F800 HEX (Ideal for many floppy disk controller boot prompts)
- THAT'S RIGHT 64K STATIC-2 WATTS
- On board RAM's may be replaced by 2716 EPROM's (pin for pin)
- CSC and Assembled/Tested boards are designed for CPU speeds up to 10 MHz
- Thorough bypassing of all supply lines
- INCREDIBLE LOW POWER OPERATION (2 WATTS)
- Does DMA
- THAT'S 2 WATTS OF STATIC 64K RAM

DETACH OUR CATALOG FROM THE MAY BYTE

DETACH OUR CATALOG FROM THE MAY BYTE

TEAMS UP WITH PRIORITY ONE ELECTRONICS TO INTRODUCE THE NEXT GENERATION OF IEEE/696 S-100 COMPUTERS

8 BIT

There are still a lot of 8 bit machines out in the world, matched with plenty of 8 bit software - but very few of these machines are working up to their peak capacity. We want the "Big 8" system to change all that, and bring professional level computing power to all the owners of older S-100 machines. And if you're assembling an 8 bit system from the ground up, "Big 8" gets you off to the best possible start ... regardless of price.

Here's what you get

1. CPU Z, our high speed, high performance Z80* based CPU board. Includes a 6 MHz CPU for maximum throughput and highest operating speed.
2. Disk 1 DMA floppy disk controller.
3. 64K of fast static RAM with 24 bit extended addressing.
4. Interfacer I - Dual Serial I/O card or Interfacer II 3 Parallel 1 Serial I/O Card.
5. CP/M* 80 2.2.
6. All documentation and manuals.

It all adds up to \$2712.00

TOTAL PACKAGE PRICE

\$1950.00

ORDER PART NO. GBT-SPEC-C

Big 8 System with Interfacer I

ORDER PART NO. GBT SPEC-D

Big 8 System with Interfacer II

SAVE EVEN MORE, when you add 2 Shugart 801R disk drives, and a dual Cabinet with Power Supply.

This package adds up to \$3962

TOTAL PACKAGE PRICE

\$3050.00

GBT-SPEC-E with Interfacer I

GBT-SPEC-F with Interfacer II

SAVE \$762.00

16 BIT

Step up to the world of 16 Bit computers now and save hundreds, even thousands of dollars if you act right now! We have made a one time only special buy from Godbout on the nucleus of a Powerful 16 Bit S-100 Computer. We have a limited number of these systems in stock, because of the special pricing we can't go back for more, so hurry! Orders will be filled on a first come basis. NO RAINCHECKS.

Here's what you get

1. 16 bit/8 bit Dual Processor (w/6 MHz 8088)
2. System Support 1 with Serial I/O. Real time clock, Interval Timers & More!
3. Disk 1 DMA Floppy Disk Controller (w/BIOS for CP/M *2.2)
4. 64K of fast static RAM (w/IEEE 24 bit extended addressing)
5. Sorcim's powerful PASCAL/M* - 8086 software on disk
6. Digital Research's CP/M* - 86 software on disk
7. I/O and Disk Controller cables, plus full documentation on all hardware and software

*PASCAL M is a trademark of Sorcim; CP/M is a registered trademark of Digital Research

It all adds up to \$3430.00

32K BYTE MEMORY

RELIABLE/COST EFFECTIVE EXPANDABLE RAM FOR 6502 AND 6800 SYSTEM—AIM 65-KIM-SYM-PET-S44-BUS

- * PLUG COMPATIBLE WITH THE AIM-65/SYM EXPANSION CONNECTOR BY USING A RIGHT ANGLE CONNECTOR (SUPPLIED) MOUNTED ON THE BACK OF THE MEMORY BOARD.
- * MEMORY BOARD EDGE CONNECTOR PLUGS INTO THE 6800 S 44 BUS.
- * CONNECTS TO PET OR KIM USING AN ADAPTOR CABLE.
- * RELIABLE—DYNAMIC RAM WITH ON BOARD INVISIBLE REFRESH—LOOKS LIKE STATIC MEMORY BUT AT LOWER COST AND A FRACTION OF THE POWER REQUIRED FOR STATIC BOARDS.
- * USES +5V ONLY, SUPPLIED FROM HOST COMPUTER.
- * FULL DOCUMENTATION, ASSEMBLED AND TESTED BOARDS ARE GUARANTEED FOR ONE YEAR AND PURCHASE PRICE IS FULLY REFUNDABLE IF BOARD IS RETURNED UNDAMAGED WITHIN 14 DAYS.

ASSEMBLED WITH 32K RAM & WITH 16K RAM	\$395.00
TESTED WITHOUT RAM CHIPS	\$339.00
HARD TO GET PARTS (NO RAM CHIPS) WITH BOARD AND MANUAL	\$279.00
BARE BOARD & MANUAL	\$109.00
	\$49.00

PET INTERFACE KIT—CONNECTS THE 32K RAM BOARD TO A 4K OR 8K PET. CONTAINS: INTERFACE CABLE, BOARD STANDOFFS, POWER SUPPLY MODIFICATION KIT AND COMPLETE INSTRUCTIONS. \$49.00

U.S. PRICES ONLY

ADVENTURE ENTHUSIASTS: I am trying to form a noncommercial original adventure software exchange. I need people who are interested in writing and exchanging adventure software. I am proposing a national mail-correspondence club dedicated to this purpose. I have written a BASIC adventure to start things off with. If you have an interest in this idea, please write me, Paul Callahan, 632 Deaver Dr, Blue Bell PA 19422.

FOR SALE: Heath H-9 modified for a 24 by 80 display. All manuals included. \$200. Michael L Couch, 1218 18th St, West Des Moines IA 50265, [515] 223-0549.

WANTED: Good clean copy of BYTE magazine for December 1975 (#4). Please give price including packaging and transportation. George Frater, 1730 Mariposa Dr, Las Cruces NM 88001.

FOR SALE: HP-67 calculator with standard pack, cards, manuals, and all original accessories, including case, charger, and program pad. Brand new in original box. Perfect condition. \$300 or best offer. Robert Peraino, 470 Claremont Rd, Springfield PA 19064, [215] 544-0947 after 9 PM.

FOR SALE: SwTPC 4 K memory; \$50. 8 K memory; \$100. JPC CK-7 real-time clock with auxiliary power supply; \$50. MicroWare RT/68 monitor read-only memory; \$50. All in excellent working condition with full documentation. C R Silvia, POB 234, Hines IL 60141.

FOR SALE: Three Forms Feed Option Kits (LAXX-LV) for DECwriter LA35 or LA36. Adjustable for many different form lengths. Regular price is \$175 per kit. These are new, in original cartons, for \$100. Also, BYTE issues 1 thru 16. No splits, please. Marshall MacFarlane, 13506 Lakebrook, Fenton MI 48430, [313] 629-0961 after 7 PM ET.

WANTED: Contact with owners of Disk Jockey 2D 8-inch disk system and switchboard I/O. Would like to interface Centronics 779 to system. Also, Wameco OMB12 for sale. \$75 or best offer. Daniel Snyder, 561 5th St, Butler PA 16001, [412] 287-1625.

WANTED: Manuals for Altair 8800 computer system. Will purchase. Don Averill, Eastern New Mexico University Sta #33, Portales NM 88130.

WANTED: Still photographs of pre-1960 computers, computer facilities, and computer scientists and engineers; also, cine footage, sound or silent, in any size, of same. Would also like to hear from other computer archivists/historians to form possible association or similar special-interest group. H Kent Craig, POB 975, Cary NC 27511, [919] 851-5017 evenings.

FOR SALE: Dot-matrix printer, Emako 20 (manufactured by C Itoh). 60 lpm, pin feed, 96 ASCII characters, 80-column, with cable for TRS-80, plugs into expansion interface. Original \$770, asking \$400. Also, twelve 5-inch diskettes; \$2.50 each. Philip Crawford, 1720 E 1st St #10, Long Beach CA 90802, [213] 591-2484.

FOR SALE: Okidata Microline 80 printer with forms tractor, pin and friction feeds. State of the Arts 80 cps dot matrix. Includes parallel interface cable. 80- or 132-column. Excellent condition, complete with manual. \$500. Clay Roberts, POB 129, Comptche CA 95427, [707] 937-4753.

FOR SALE: Twenty-three years of computing history. 276 issues of DATAMATION magazine. November 1957 thru December 1980. (Only two issues missing.) \$500 plus shipping. R L LaFara, 10632 E 79th, Indianapolis IN 46236, [317] 823-6366 evenings.

WANTED: I am interested in exchanging ideas about possible ways computers can be used as an aid for guitar playing, in particular the application of computers for arranging and composing music on the guitar. I am currently writing a program that will find an optimum tuning for a given piece of music from the thousands that are possible. Bruce Johnston, 655 Sharp Ln 130, Baton Rouge LA 70815.

GIFT: HP-9100-A computing calculator. Sixteen registers store 197 steps. All math and trig functions, conditional jumps. In operating condition, but erratic. Will donate for cost of shipping. Winslow Palmer, 114 Montrose Dr, Fort Myers FL 33907, [813] 481-0027.

FOR SALE: APF Imagination Machine microcomputer. Power supply, RF modulator, cassette recorder, joysticks, and much software included—ready for hookup to television (it has color graphics and sound). Like new condition, over twenty programs, including Space Destroyers, Boxing, Baseball, and Hangman. The value of this system with software is over \$800, willing to sacrifice for \$600 or best offer. Bruce Chapman, 316 Newtown Rd, Richboro PA 18954.

FOR SALE: Pascal Microengine. Western Digital desk-top computer with 16-bit processor, 32 K words (64 K bytes) of programmable memory, floppy-disk controller, two RS-232C asynchronous/synchronous ports, and software (UCSD Pascal). \$3400. G Mann, 9 Aberdeen, Irvine CA 92714, [714] 731-6145.

FOR SALE: Z80 Starter Kit from S D Systems, assembled and tested. Will sell for \$325. Lee Rathbun, POB 1268, Minden NV 89423, [702] 782-4455.

FOR SALE: Altair 8800B with processor, front panel, and motherboard; \$400. 3P+S; \$100. 8 K static 300 ns; \$100. Two Z16 16 K static memory boards; \$200 each. North Star single-density disk controller board; \$50. 4 K MITS static memory; \$75. Will sell as package for \$900. Bob Fiorella, 27 Kirkwood Dr, Glen Cove NY 11542, [516] 676-1480 after 6 PM ET.

FOR SALE: Hewlett-Packard (Mosely) 8.5-by 11-inch flatbed plotter, good condition; \$150. Digital Group PT-96 complete printer, like new; \$300. Complete DISKMON for 5-inch floppies (original, including ROM, etc.); \$30. Digital Group 5-slot memory-extension motherboard with all connectors installed; \$20. 10-day return privilege guarantee on all above. Jerry E Flanders, 1767 Gregory Lake Rd, N Augusta SC 29841, [803] 278-0984 after 6 ET.

FOR SALE: 16 K Atari 800 personal computer. Brand new and unused. Unopened in original carton, with manual. Cost \$1080, for \$810 plus shipping. Atari disk drive, brand new. Cost \$700, for \$520 plus shipping. HP-97 desk-top programmable printing calculator, one month old. Cost \$750, for \$650 plus shipping. Extensive software library for Atari, TRS-80; write for details. Doug Solomon, 208 Overbrook, Freehold NJ 07728.

FOR SALE: SwTPC 6800 computer. 16 K programmable memory, teletypewriter interface, parallel interface, cassette recorder, cables, dual cassette recorder, 16 by 32 terminal, 64-character set, 9-inch black-and-white monitor. Complete with \$100 worth of software and 4 K and 8 K BASIC. Editor/Assembler tapes. Asking \$550 or best offer. John Antypas, 49 DeLaurenti Ct, Walnut Creek CA 94598, [415] 943-7409.

WANTED: Bally computer users. Would like to exchange information on the Bally home computer. Want old newsletters, system information, and read-only memory listings. If you know of a group (or person) using the Bally, I would like to have their mailing address. Also, give them my address so we can exchange information. Interested in additional unit at a good price, also other hardware. BALLYuserexch, POB 28355, Columbus OH 43228.

March BOMB Results

Gregg Williams and Franklin C Crow tied for first place for their articles, "Structured Programming and Structured Flowcharts" and "Three-Dimensional Computer Graphics, Part I." A check for \$100 will be sent to Mr Crow. (Being a BYTE employee, Gregg is not eligible for the prize money.) The second-place prize of \$50 goes to Tim Ahrens, Jack Browne, and Hunter Scales for their article, "What's Inside Radio Shack's Color Computer?" The next two places went to Steve Ciarcia's "Build the Disk-80" and Jim Howard's "What Is Good Documentation?"

To get further information on the products advertised in BYTE, fill out the reader service card with your name and address. Then circle the appropriate numbers for the advertisers you select from the list. Add a 1B-cent stamp to the card, then drop it in the mail. Not only do you gain information, but our advertisers are encouraged to use the marketplace provided by BYTE. This helps us bring you a bigger BYTE. The index is provided as an additional service by the publisher, who assumes no liability for errors or omissions. *Correspond directly with company.

BYTE'S BOMB is your direct line to the editor's desk. Each month, the two top-rated authors receive bonuses based on your votes. To cast your vote, first look at the list of this month's articles and corresponding article numbers (located in the unclassified ads section on the page preceding the Reader Service list), then rate each article as **Excellent**, **Good**, **Fair**, or **Poor** by circling the appropriate number in each column below. Your feedback helps to produce the best possible magazine each month.

Article No.	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19	20	21	22	23	24	25

Don't Miss An Issue!

Have BYTE delivered to your door.

Each month BYTE will bring you the latest in microcomputer technology.

DISCOVER and IMPLEMENT new ideas. Don't miss the original information presented in the pages of BYTE.

With BYTE you'll always be among the first to know about the important breakthroughs, worthwhile new equipment, and innovative projects in the world of computing.

CHALLENGE US to deliver the very best ideas in microcomputers and advanced technology to you. Return the attached card today!

Subscribe to BYTE—the world's leading computer magazine.

The Dynabyte Difference:

Unequalled price/performance
with total expandability.

Buying the powerful Dynabyte 5615 isn't only smart, it's cost efficient.

The 5615 is the sure way to get the system you need. With more power for the price. You can select memory to 400 KB on our S-100 bus architecture. Choose from 3 sizes of Winchester to 45 MB and have diskette back-up to your system also. If it's tape back-up you need, then choose our 5700. If you need less storage, our 5¼" floppy 5200, our 8" floppy 5300 or our 5400 system using both floppies, with up to 3.6 MB capacity, can be yours.

The 5615 system is available with either single user CP/M or our enhanced MP/M for multi-user applications. Our MP/M operating system supports up to eight terminals, with a separate or shared spooler, and up to sixteen printers with no required partition space. Add to this multi-tasking, bank switching, record lockout, type-ahead and DMA and you have an MP/M operating system that supports a

host of existing languages and meets minicomputer standards.

No multi-user applications library is so responsive to your needs. The 5615 features Business Manager,[™] the fully integrated, menu-driven, well documented, easy to install accounting system that gives you file/record protection, HELP commands, multi-level security, keyed data access, internal disk management, available source code and more.

System expandability, power and price/performance are further enhanced by on-hand availability, quantity discounts, 180-day warranty and a national WATS line for support.

Whether you use or sell computer systems, you should ask about the microcomputer that puts minicomputer capability in your hands. That's the 5615. That's the Dynabyte Difference. Call Mike Seashols, V.P. Marketing (800) 227-8300. In California (415) 329-8021. Dynabyte, 115 Independence Drive, Menlo Park, California 94025.

A cost effective 10 megabyte system from the leader in Winchester based microcomputers.

Ohio Scientific has put a low-cost, high-performance 8" non-removable hard disk together with its popular desk-top micro-computer system. This yields approximately 10 megabytes of fast hard disk capability at a tremendous cost/performance benefit over floppy based microcomputer systems.

C3-D

The 10 megabyte system is also available with the added advantage of triple microprocessors — the 6502A, 68000 and Z-80A. This allows you to make maximum use of Ohio Scientific's extensive software library as well as programs offered by independent suppliers and publishers. \$7,600.

C2-D Standard Features

- 52K RAM
- 8" floppy disk drive for program transport and backup.
- OS-65U small business operating system.
- 9-digit precision BASIC by Microsoft.
- Available in OEM quantities at attractive discounts.
